2.1 Atmospheric LIDAR - Level 0

This specification arises in the frame of the ESSS and ECGP. The purpose of this document is to specify the format and content of the Instrument Source Packets as well as of the L0 products for the ATLID Instrument.

The current ISP format version is 4.0. Note that the numbering scheme has been changed by ASF.

TBDs/TBCs/TBWs mark specifications that are yet to be completed. Currently, this document includes no TBDs/TBCs/TBWs.

The ATLID Instrument generates the following L0 products.

Table 2.1-1: Products Summary Table

2.1.2.4.4 Instrument Source Packets

ATLID operates in a number of modes. Some of the modes do not generate ISPs at all; some generate ISPs for special purposes (e.g. calibration measurements). For the ESSS some of them generate only dummy ISPs (that is ISPs in the right format with dummy values). The ATLID instrument modes are summarised in Table 2.1-3.
