2.2 Nomenclature

| | |
|---------------------|---|
| <i>CFI</i> | A group of CFI functions, and related software and documentation that will be distributed by ESA to the users as an independent unit |
| <i>CFI function</i> | A single function within a CFI that can be called by the user |
| <i>Library</i> | A software library containing all the CFI functions included within a CFI plus the supporting functions used by those CFI functions (transparently to the user) |

2.3 Note on Terminology

In order to keep compatibility with legacy CFI libraries, the Earth Observation Mission CFI Software makes use of terms that are linked with missions already or soon in the operational phase like the Earth Explorers.

This may be reflected in the rest of the document when examples of Mission CFI Software usage are proposed or description of Mission Files is given.

4 INTRODUCTION

4.1 Functions Overview

This software library contains the CFI functions required to perform accurate computation of pointing parameters from and to a satellite for various types of targets.

It includes a set of functions to initialize the attitude of the platform and the instruments. The values provided by these functions are later used by all the other functions of the library.

A detailed description of each function is provided in Section 7.

Please refer also to:

[MCD] for a detailed description of the time references and formats, coordinate systems, parameters and models used in this document

[GEN_SUM] for a complete overview of the CFI, and in particular the detailed description of the *Id* concept and usage and the error handling functions.

4.1.1 Attitude Data Flow

The following figure shows the typical data flow for the attitude functions. First, the different transformations between the various reference frames are initialised. Then, given the spacecraft position, the attitude is calculated:

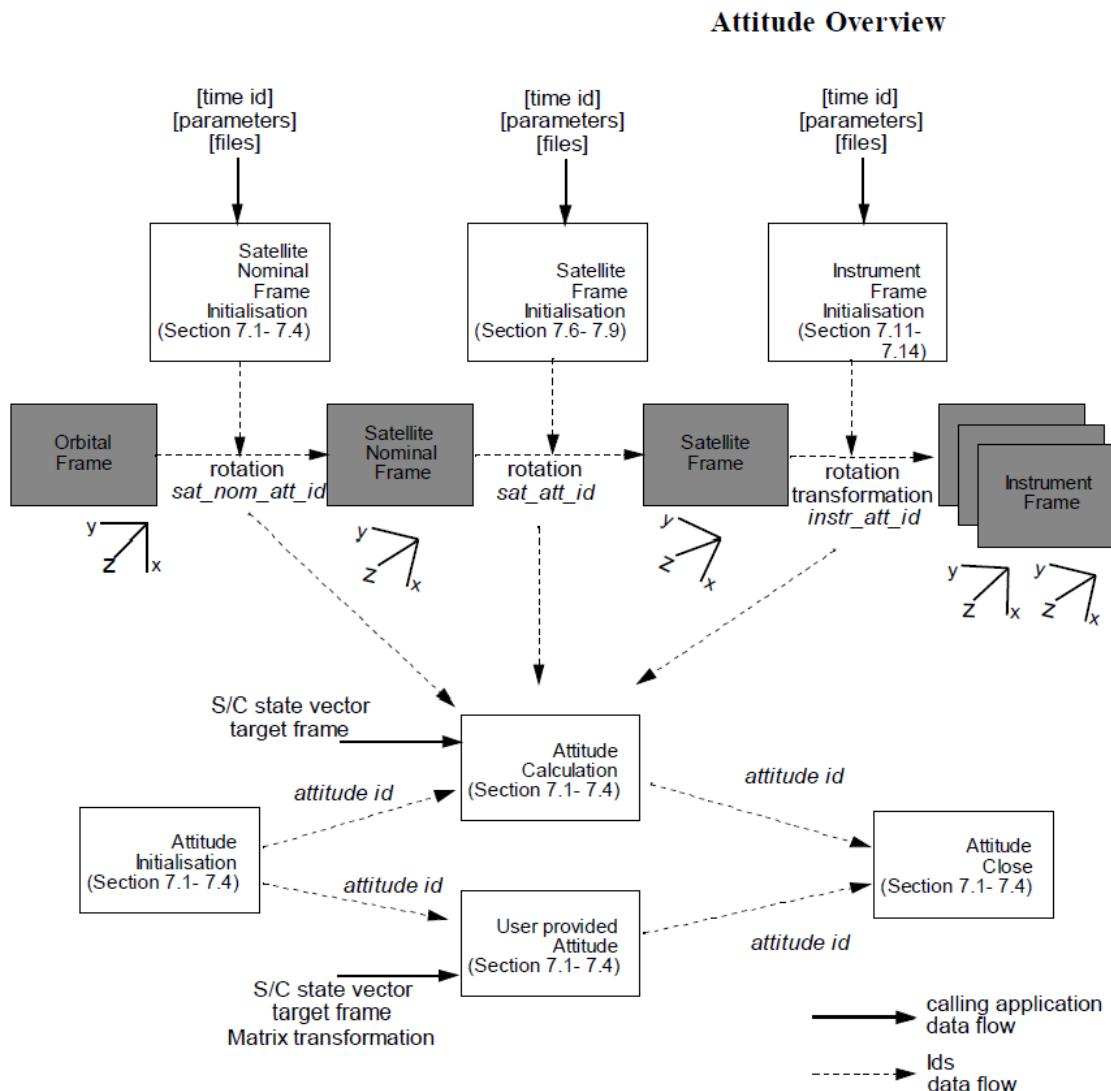

Figure 1: Attitude Initialization Overview

Each different transformation can be initialised with different models (note that all the attitudes can be initialized at the same time using the function `xp_attitude_define` (see section 7.49) and an Attitude definition file):

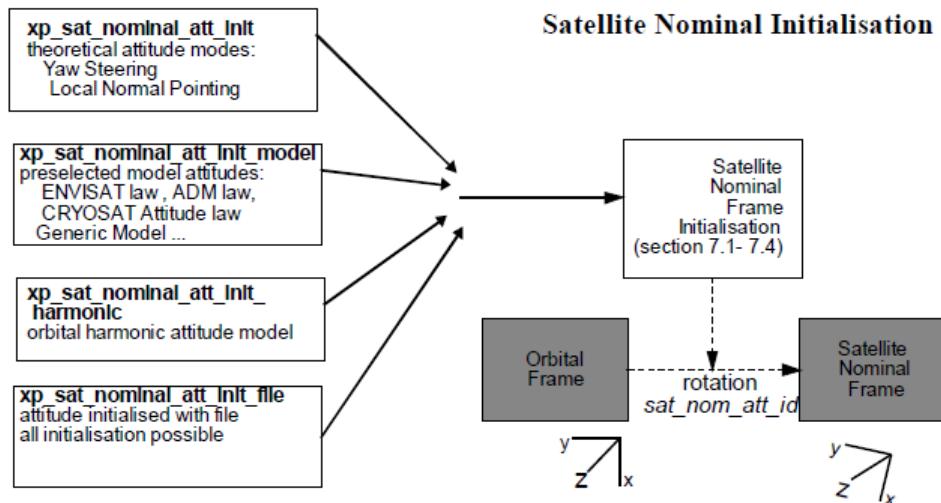

Figure 2: Satellite Nominal Initialization

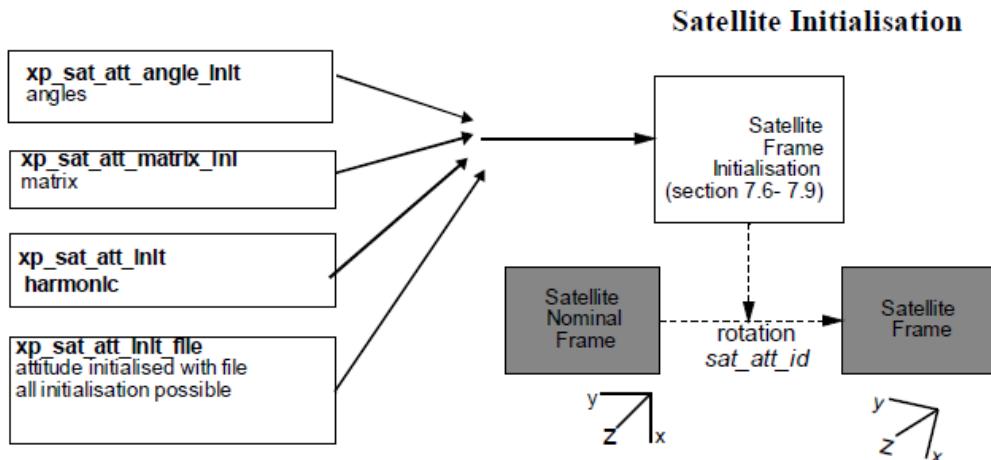

Figure 3: Satellite Initialization

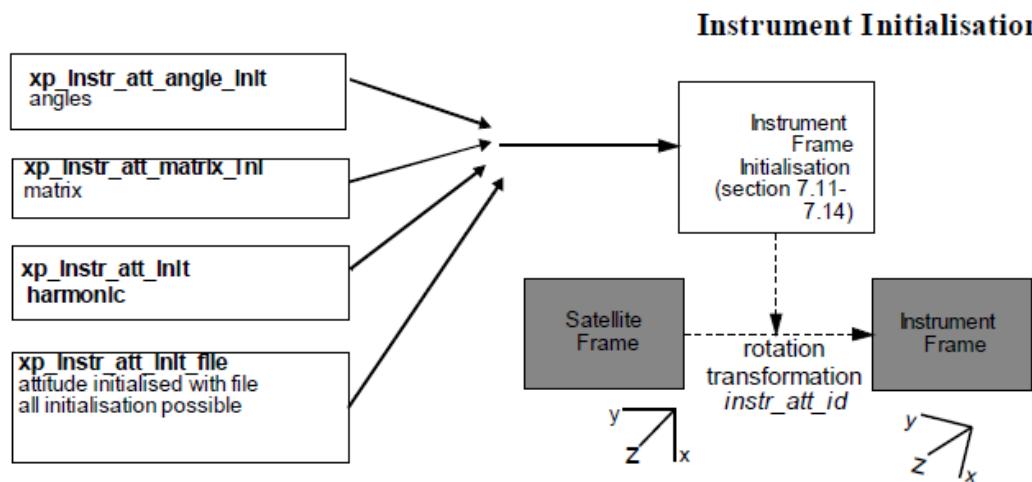

Figure 4: Instrument Initialization

4.1.2 Geolocation Routines Data Flow

The following figure shows the typical data flow for the geolocation routines functions. First, the attitude should be calculated, and, if needed, the refraction and Digital Elevation Models initialised.

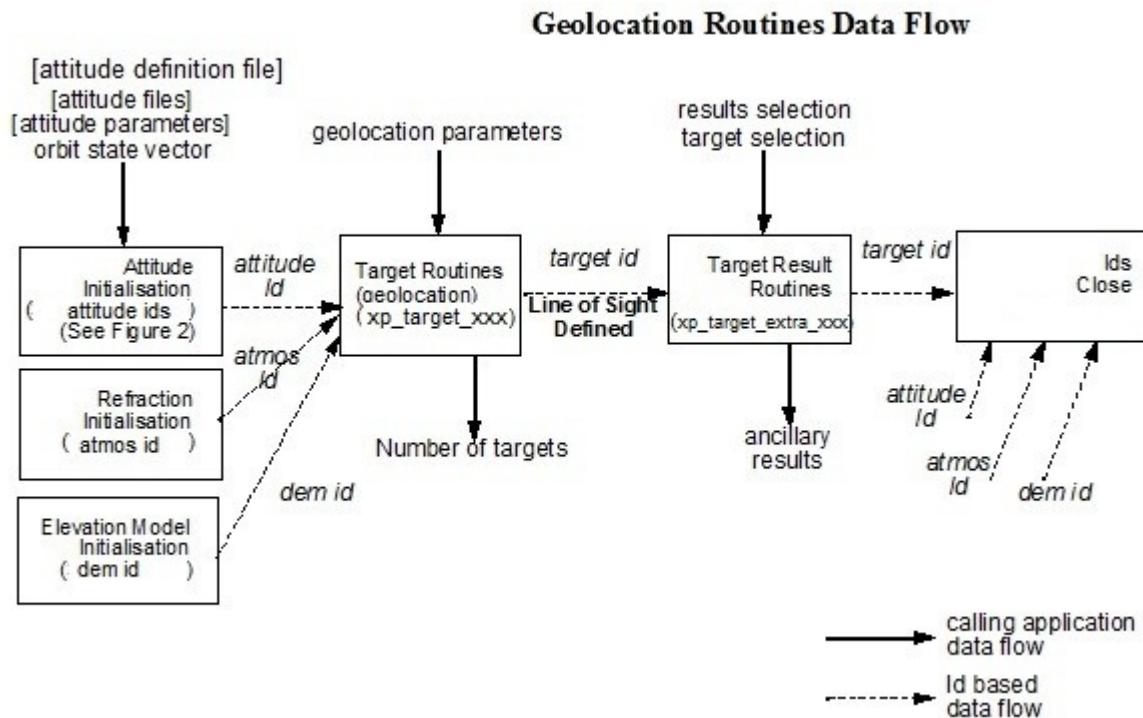

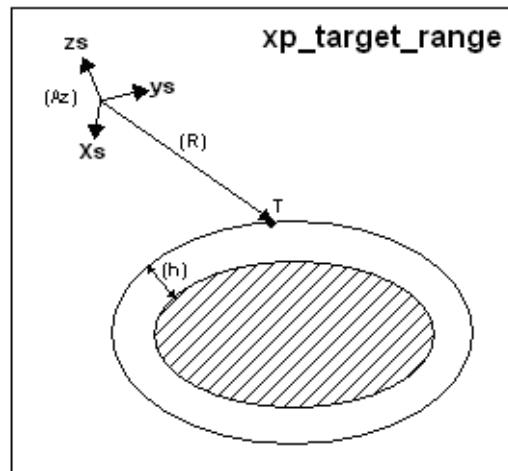

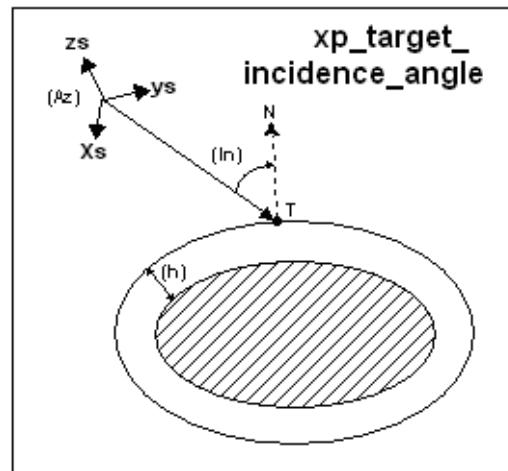

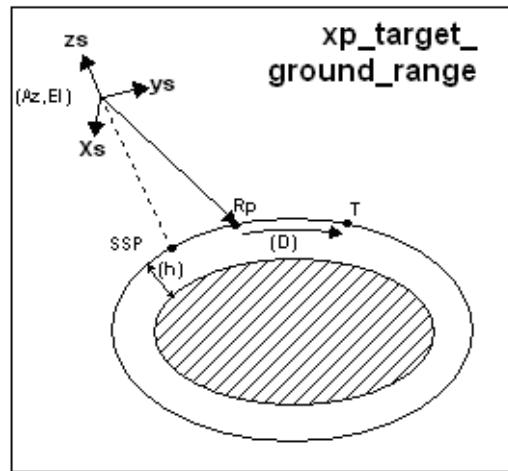

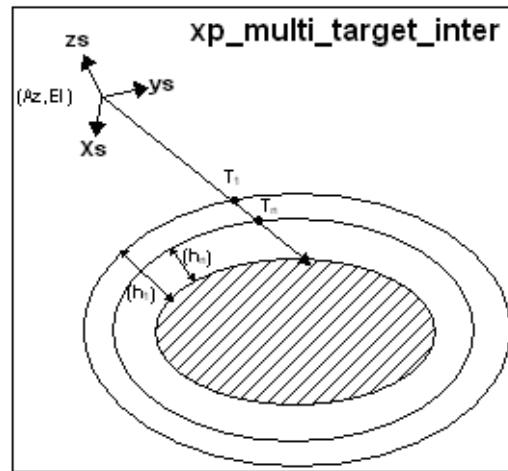

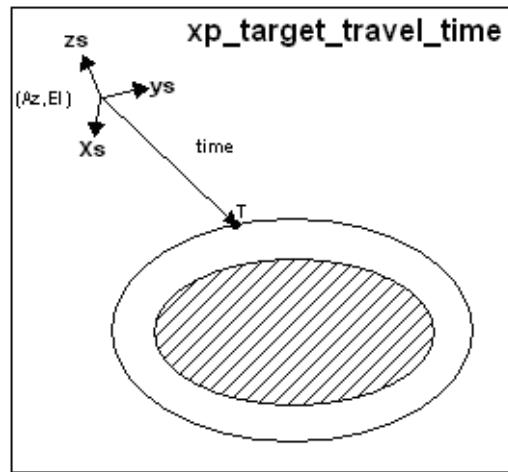

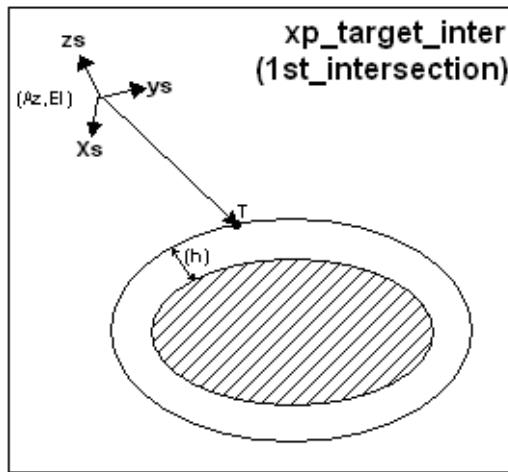

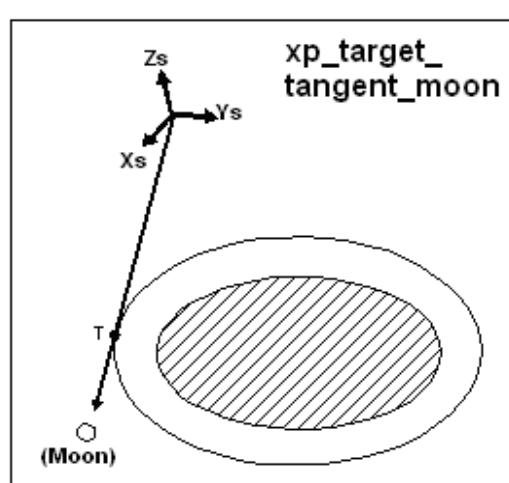

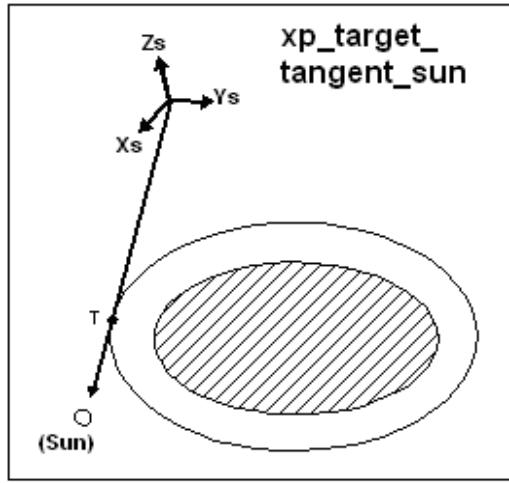

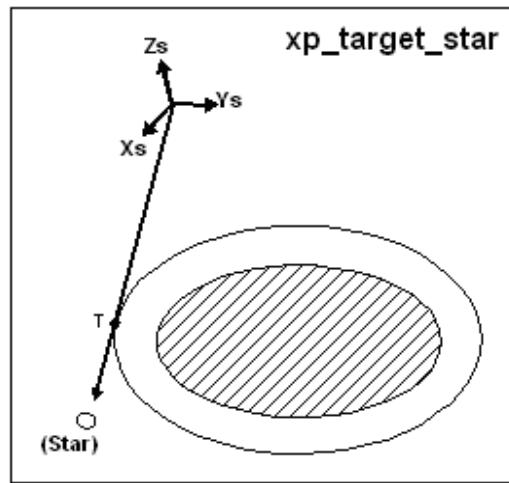

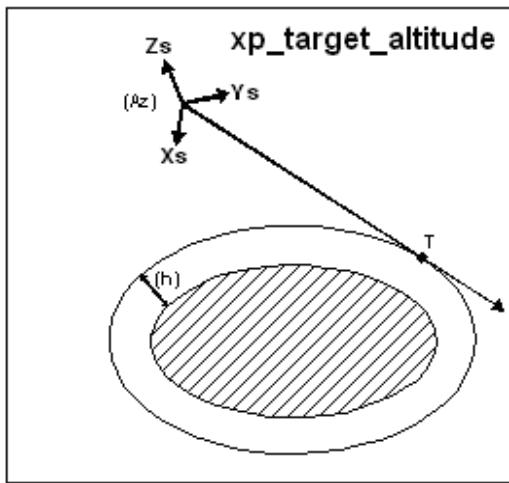

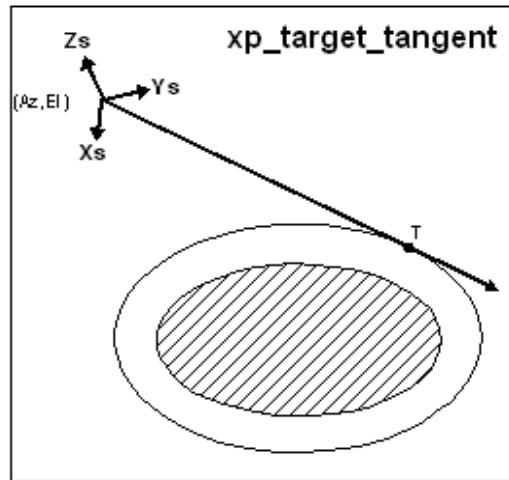

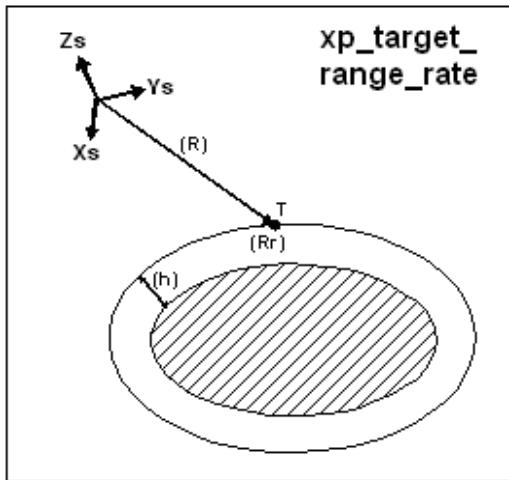

Figure 5: Geolocation Routines Calling Sequence

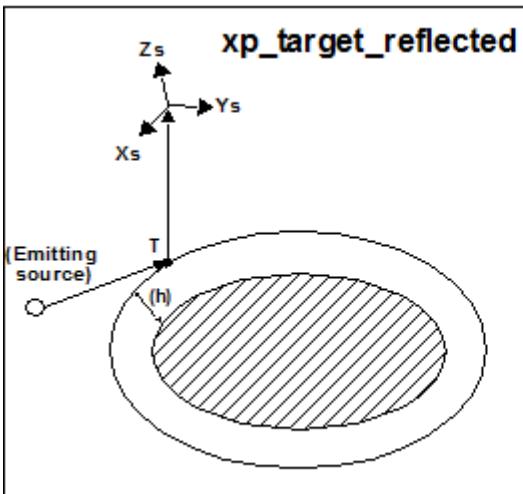

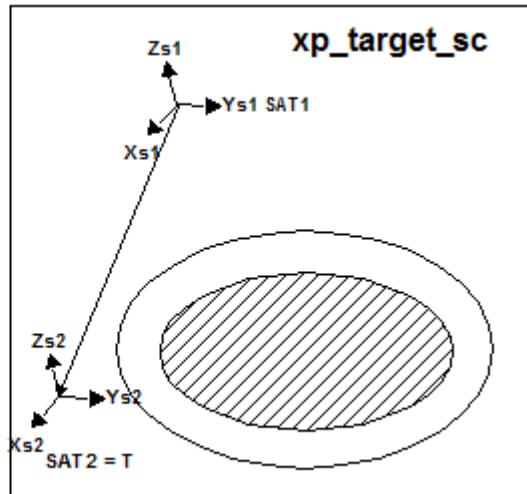

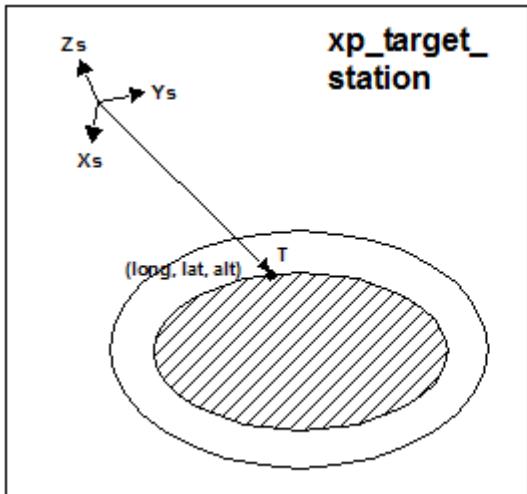

The table below and the diagrams on the next pages describe the various `xp_target_<function>`.

Table 1: `xp_target functions`

| <code>xp_target_<function></code> | Description |
|--|--|
| <code>xp_(multi)_target_inter</code> | It calculates the intersection point(s) of the line of sight defined by an elevation and an azimuth angle (or a set of them) expressed in the input Attitude frame, with a surface(s) located at a certain geodetic altitude(s) over the Earth. |
| <code>xp_target_list_inter</code> | |
| <code>xp_(multi)_target_travel_time</code> | It calculates the point of the line or sight from the satellite (defined by an elevation and an azimuth angle expressed in the selected Attitude Frame) at a given travel time(s) along the (curved) line of sight. |
| <code>xp_target_ground_range</code> | <p>It calculates the location of a point that is placed on a surface at a certain geodetic altitude over the Earth, that lays on the plane defined by the S/C position, the nadir and a reference point, and that is at a certain distance or ground range measured along that surface from that reference point.</p> <p>This reference point is calculated being the intersection of the previous surface with the line of sight defined by an elevation and azimuth angle in the input Attitude coordinate system.</p> |
| <code>xp_target_incidence_angle</code> | It calculates the location of a point that is placed on a surface at a certain geodetic altitude over the Earth and that is seen from the S/C on a line of sight that forms a certain azimuth angle in the input Attitude frame and that intersects that surface with a certain incidence angle. |
| <code>xp_target_range</code> | It calculates the location of a point that is placed on a surface at a certain geodetic altitude over the Earth, that is seen from the S/C on a line of sight that forms a certain azimuth angle in the input Attitude frame, and that is at a certain range or slant-range from the S/C. |
| <code>xp_target_range_rate</code> | It calculates the location of a point that is placed on a surface at a certain geodetic altitude over the Earth, that is at a certain range from S/C, and whose associated Earth-fixed target has a certain range-rate value. |
| <code>xp_target_tangent</code> | It calculates the location of the tangent point over the Earth that is located on the line of sight defined by an elevation and azimuth angles expressed in the input Attitude frame. |
| <code>xp_target_altitude</code> | It calculates the location of the tangent point over the Earth that is located on a surface at a certain geodetic altitude over the Earth and that is on a line of sight that forms a certain azimuth angle in the input Attitude frame. |
| <code>xp_target_star</code> | It calculates the location of the tangent point over the Earth that is located on the line of sight that points to a star defined by its right ascension and declination coordinates. |
| <code>xp_target_generic</code> | The cartesian state vector of the target is taken as an input. |
| <code>xp_target_tangent_sun</code> | It calculates the location of the tangent point over the Earth that is located on the line of sight that points to the Sun |
| <code>xp_target_tangent_moon</code> | It calculates the location of the tangent point over the Earth that is located on the line of sight that points to the Moon |
| <code>xp_target_station</code> | It calculates the most relevant observation parameters of the link between the satellite and a ground station |
| <code>xp_target_sc</code> | It calculates the most relevant observation parameters of the link between one satellite and another Satellite. |

[Xs,Ys,Zs] = Attitude Frame
() = Input data to the mode
(Az,EI) = A azimuth + Elevation of the LOS
(h) = Geodetic altitude of the target
(R) = Range Satellite \Leftrightarrow Reference Point/Target
(D) = Distance or Ground range Ref. Point \Leftrightarrow Target
(In) = Incidence angle of the LOS
(Rr) = Range-rate of the Earth-fixed target
T = Target
SSP = Sub Satellite Point = Nadir of the satellite
Rp = Reference Point
N = Normal vector to the surface at a geodetic altitude = h

As it can be seen from the list of functions, there are some functions that calculate several targets (xp_multi_target_xxxx, xp_target_list_inter). The number of targets found by the functions is returned through the interface.

In addition to these “user” targets, two other categories of targets can be defined, “LOS” targets and “DEM” targets.

4.1.2.1 LOS targets

The idea is to get information about all the ray path points computed by a specific target routine along the Line of Sight (LOS) trajectory.

For every target routine, the output parameter num_los_target will return the number of points in the path.

It applies when the variable "target_type" is equal to XP_LOS_TARGET_TYPE.

1. Start point of LOS

The spacecraft position (Instrument CS) shall be considered as the start point for the LOS path.

2. Stop point of LOS

The stop point for the LOS path will be different depending on the selected target function; nominally it will be the resulting target point.

- `xp_target_inter`, `xp_target_list_inter` and `xp_multi_target_inter`: 1st or 2nd intersection point (Point corresponding to the last altitude for the `multi_target` routine)
- `xp_target_ground_range`: Target point
- `xp_target_incidence_angle`: Target point
- `xp_target_range`: Target point
- `xp_target_range_rate`: Target point
- `xp_target_tangent`: Two different cases to consider depending on whether refraction is selected or not:
 - No refraction mode: Tangent point
 - Refraction mode:
 - The 2nd intersection point with a surface located at Refraction Model Maximum Height (geodetic altitude) over the Earth if tangent height \leq Refraction Model Maximum Height
 - The tangent point if tangent height $>$ Refraction Model Maximum Height
- `xp_target_altitude`: Point at selected altitude
- `xp_target_star`: Two different cases to consider depending on whether refraction is selected or not:
 - No refraction mode: Tangent point
 - Refraction mode:
 - The 2nd intersection point with a surface located at Refraction Model Maximum Height (geodetic altitude) over the Earth if tangent height \leq Refraction Model Maximum Height
 - The tangent point if tangent height $>$ Refraction Model Maximum Height
- `xp_target_station`: Ground Station position
- `xp_target_generic`: Target position
- `xp_target_reflected`: Reflection point
- `xp_target_travel_time` and `xp_multi_target_travel_time`: Point at selected travel time (Point corresponding to the last travel time for the `multi_target` routine)
- `xp_target_tangent_sun`: Tangent point
- `xp_target_tangent_moon`: Tangent point
- `xp_target_sc`: Target position.

4.1.2.2 DEM targets

A DEM Target is defined as the intersection of a line of sight with the Earth Surface defined using a digital elevation model (DEM).

A DEM Target is calculated using as line of sight the LOS targets that has been computed previously with a target routine (Note that such LOS consist in a polygonal line, no necessarily a straight line). Consequently, to get a DEM target it is necessary to follow these steps:

- Initialize the DEM model using the `xp_dem_init` routine and a configuration file (Section 7.60).
- One call to the target routine for getting the LOS targets.
- One call to the target extra routine requesting the DEM target.

The digital elevation model of the Earth consists in a set of points defining a grid for which a measure of the altitude over the Earth reference ellipsoid is given. The altitude of the points within each cell of the grid is computed by the CFI using a bilinear interpolation with the points of the corner of the cell. Details about the bilinear algorithm used to compute the intersection can be seen in [LOS_ALG].

4.1.2.3 Light propagation model

When the light propagation model is enabled, the target functions keep into account the time spent by a generic signal traveling at the speed of light to:

- in the TRANSMITTER mode: go from the satellite to the target;
- in the RECEIVER mode: go from the target to the satellite.

Two distinct times are considered:

1) The satellite time (T) is the time provided as input to the target function. It is:

- in the TRANSMITTER mode: the time at which the satellite (instrument) emits the signal towards the target;
- in the RECEIVER mode: the time at which the satellite (instrument) receives the signal emitted by the target.

2) The target time is the satellite time T plus or minus the light travel time between satellite and target (dT). It is:

- in the TRANSMITTER mode: $T+dT$, i.e. the target receives the signal sent by the satellite with a delay dT ;
- in the RECEIVER mode: $T-dT$, i.e. the satellite receives the signal emitted by the target with a delay dT .

dT is calculated as the light travel time from the satellite to target calculated with $dT=0$. When the light propagation model is not activated, it is assumed $dT=0$, therefore target and satellite are considered at the same time T .

According to the definitions above, the Line of Sight (LOS) can be defined as the segment joining satellite and target at their correspondent times.

For the following functions the calculation method is slightly different:

- `xp_target_range`: the input range is used to calculate the light travel time;
- `xp_target_travel_time`: the input travel time is used as dT ;

- `xp_target_generic`, `xp_target_sc`: in this case the input is the target at time $T+/-dT$. The function estimates the target at T to compute the line of sight parameters also considering (if provided as inputs) velocity and acceleration of the target.

Target geometric properties (returned by the extra functions) are evaluated considering the two distinct times, for example:

- The target position (i.e. position in EF co-ordinates and geodetic co-ordinates) is evaluated at time $T-dT$;
- Direction from satellite to target and viceversa are evaluated considering the satellite position at time T and target position at time $T+/-dT$;
- Direction from target to e.g. sun/moon take into account the target position at $T+/-dT$ and other celestial bodies at the same time.

Following figure 6. shows an example using the `xp_target_inter` function.

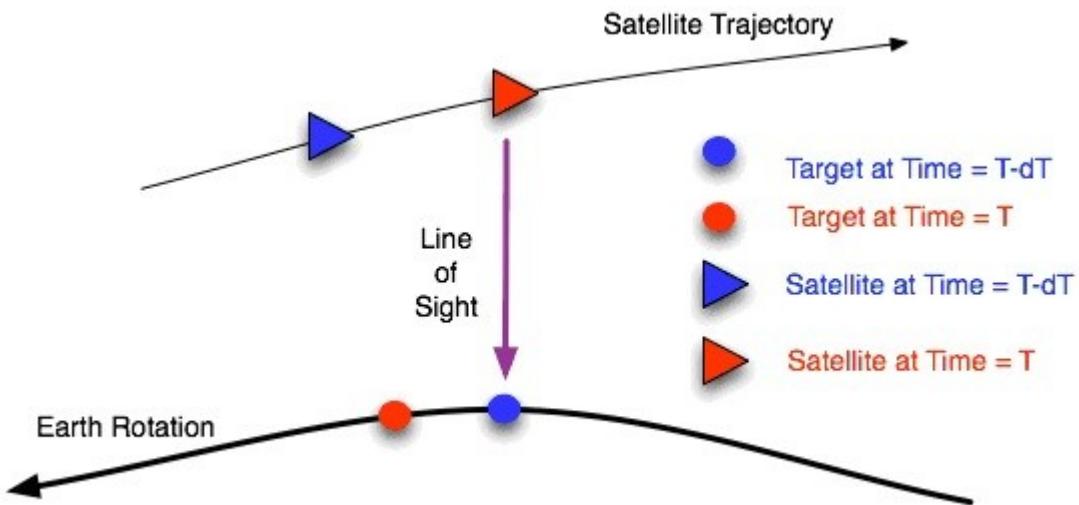

Figure 6: Example of light travel time with `xp_target_inter`

The light propagation mode is set to RECEIVER and input azimuth,elevation are **0, 90 deg** (assuming a local normal pointing). The signal is emitted by the target at time $T-dT$ (blue point, let's assume at geodetic co-ordinates (**lon,lat,h**) and EF co-ordinates (**X,Y,Z**)) and is received by the satellite at time T (red triangle). Due to Earth rotation, at time T the observed target has moved to the red point.

Here are some examples of results from `xp_target_extra...` functions:

- `xp_target_extra_vector`:
 - Target position: the vector (**X,Y,Z**), i.e. the target point considered at $T-dT$;

- Direction LOS: the vector corresponding to the purple line in Fig. X (it is the line joining satellite position at time T and target position at time T-dT);
- xp_target_extra_main:
 - Target geodetic co-ordinates: (**lon,lat,h**)
 - Satellite to target azimuth, elevation: **0,90**, i.e. the same azimuth and elevation used as input for xp_target_inter.
 - Target to satellite azimuth, elevation: **0,90**, this is the view direction from the target at time T-dT to the satellite at time T.

The same results are given by the xp_target_extra... functions if the xp_target_generic is called with input target at EF co-ordinates (**X,Y,Z**) and velocity set to zero.

To activate the light propagation mode the *model_id* structure must be initialized using the function xl_model_init as follow:

1) for TRANSMITTER mode:

```
#include <explorer_lib.h>
{
    long mode, models[XL_NUM_MODEL_TYPES_ENUM];
    xl_model_id model_id = {NULL};
    long ierr[XL_NUM_ERR_MODEL_INIT], status;

    mode = XL_MODEL_CONFIG;
    ...
    models[XL_MODEL_TYPE_LIGHT_PROPAGATION] = XL_MODEL_LIGHT_PROPAGATION_TRANSMITTER;

    status = xl_model_init (&mode, models,
                           &model_id,
                           ierr)
}
```

2) for RECEIVER mode:

```
#include <explorer_lib.h>
{
    long mode, models[XL_NUM_MODEL_TYPES_ENUM];
```

```
xl_model_id model_id = {NULL};  
long ierr[XL_NUM_ERR_MODEL_INIT], status;  
  
mode = XL_MODEL_CONFIG;  
...  
models[XL_MODEL_TYPE_LIGHT_PROPAGATION] = XL_MODEL_LIGHT_PROPAGATION_RECEIVER;  
  
status = xl_model_init (&mode, models,  
                      &model_id,  
                      ierr)  
}
```

5 LIBRARY INSTALLATION

For a detailed description of the installation of any CFI library, please refer to [GEN_SUM].

6 LIBRARY USAGE

The EO_POINTING software library has the following dependencies:

- Other EOCFI libraries:
 - EO_FILE_HANDLING (See [F_H_SUM]).
 - EO_DATA_HANDLING (See [D_H_SUM]).
 - EO_LIB (See [LIB_SUM]).
- Third party libraries:
 - POSIX thread library: libpthread.so (Note: this library is normally pre-installed in Linux and MacOS platforms. For Windows platforms, pthread.lib is included in the distribution package, with license LGPL);
 - GEOTIFF, TIFF, PROJ, LIBXML2 libraries (these libraries are included in the distribution package. Their usage terms and conditions are available in the file "TERMS_AND_CONDITIONS.TXT" which is part of the distribution package).

In order to improve run-time performance, some functions (e.g. `xp_target_list_extra_vector`, `xp_target_list_extra_main`, `xp_target_list_extra_aux`, `xp_target_list_extra_ef_target`, `xp_target_list_extra_target_to_sun`, `xp_target_list_extra_target_to_moon`, `xp_target_list_extra_specular_reflection`) perform their computations in multi-threading mode.

The multi-threading code of the Pointing functions uses the OpenMP API (see <http://en.wikipedia.org/wiki/OpenMP>).

OpenMP is not supported in the clang compiler, therefore such functions work in single-thread mode in MacOS.

The following is required to compile and link a Software application that uses the EO_POINTING software library functions (it is assumed that the required EOFCI and third-part libraries are located in directory `cfi_lib_dir` and the required header files are located in `cfi_include`, see [GEN_SUM] for installation procedures):

1) include the following header files in the source code:

- `explorer_pointing.h` (for a C application)

2) use the following compile and link options:

Linux platforms:

```
-Icfi_include_dir -Lcfi_lib_dir -lexplorer_pointing  
-lexplorer_lib -lexplorer_data_danding -lexplorer_file_handling -lgeotiff -ltiff -lproj -lxml2 -lm -lc -lpthread -fopenmp
```

MacOS platforms (openmp is not supported):

```
-Icfi_include_dir -Lcfi_lib_dir -lexplorer_pointing
```

-lexplorer_lib - lexplorer_data_dandling -lexplorer_file_handling -lgeotiff -ltiff -lproj -lxml2 -lm -lc -lpthread

Windows platforms:

/I "cfi_include_dir" /libpath:"cfi_lib_dir" libexplorer_pointing.lib

libexplorer.lib libexplorer_data_handling.lib libexplorer_file_handling.lib libgeotiff.lib libtiff.lib libproj.lib libxml2.lib pthread.lib Ws2_32.lib /openmp

All functions described in this document have a name starting with the prefix `xp_`

To avoid problems in linking a user application with the `EO_POINTING` software library due to the existence of names multiple defined, the user application should avoid naming any global software item beginning with either the prefix `XP_` or `xp_`.

It is possible to call the following CFI functions from a user application.

Table 2: CFI functions included within `EO_POINTING` library

| Function Name | Enumeration value | Long |
|---|--|------|
| Main CFI Functions | | |
| <code>xp_sat_nominal_att_init</code> | <code>XP_SAT_NOMINAL_ATT_INIT_ID</code> | 0 |
| <code>xp_sat_nominal_att_init_model</code> | <code>XP_SAT_NOMINAL_ATT_INIT_MODEL_ID</code> | 1 |
| <code>xp_sat_nominal_att_init_harmonic</code> | <code>XP_SAT_NOMINAL_ATT_INIT_HARMONIC_ID</code> | 2 |
| <code>xp_sat_nominal_att_init_file</code> | <code>XP_SAT_NOMINAL_ATT_INIT_FILE_ID</code> | 3 |
| <code>xp_sat_nominal_att_close</code> | <code>XP_SAT_NOMINAL_ATT_CLOSE_ID</code> | 4 |
| <code>xp_sat_att_angle_init</code> | <code>XP_SAT_ATT_ANGLE_INIT_ID</code> | 5 |
| <code>xp_sat_att_matrix_init</code> | <code>XP_SAT_ATT_MATRIX_INIT_ID</code> | 6 |
| <code>xp_sat_att_init_harmonic</code> | <code>XP_SAT_ATT_INIT_HARMONIC_ID</code> | 7 |
| <code>xp_sat_att_init_file</code> | <code>XP_SAT_ATT_INIT_FILE_ID</code> | 8 |
| <code>xp_sat_att_quat_plus_matrix_init</code> | <code>XP_SAT_ATT_QUAT_PLUS_MATRIX_INIT_ID</code> | 9 |
| <code>xp_sat_att_quat_plus_angle_init</code> | <code>XP_SAT_ATT_QUAT_PLUS_ANGLE_INIT_ID</code> | 10 |
| <code>xp_sat_att_close</code> | <code>XP_SAT_ATT_CLOSE_ID</code> | 11 |
| <code>xp_instr_att_angle_init</code> | <code>XP_INSTR_ATT_ANGLE_INIT_ID</code> | 12 |
| <code>xp_instr_att_matrix_init</code> | <code>XP_INSTR_ATT_MATRIX_INIT_ID</code> | 13 |
| <code>xp_instr_att_init_harmonic</code> | <code>XP_INSTR_ATT_INIT_HARMONIC_ID</code> | 14 |
| <code>xp_instr_att_init_file</code> | <code>XP_INSTR_ATT_INIT_FILE_ID</code> | 15 |
| <code>xp_instr_att_close</code> | <code>XP_INSTR_ATT_CLOSE_ID</code> | 16 |
| <code>xp_change_frame</code> | <code>XP_CHANGE_FRAME_ID</code> | 17 |
| <code>xp_attitude_init</code> | <code>XP_ATTITUDE_INIT_ID</code> | 18 |
| <code>xp_attitude_compute</code> | <code>XP_ATTITUDE_COMPUTE_ID</code> | 19 |

| | | |
|--------------------------------|-----------------------------------|----|
| | | |
| xp_attitude_user_set | XP_ATTITUDE_USER_SET_ID | 20 |
| xp_attitude_close | XP_ATTITUDE_CLOSE_ID | 21 |
| xp_set_az_el_definition | XP_SET_AZ_EL_DEFINITION_ID | 22 |
| xp_atmos_init | XP_ATMOS_INIT_ID | 23 |
| xp_atmos_close | XP_ATMOS_CLOSE_ID | 24 |
| xp_dem_init | XP_DEM_INIT_ID | 25 |
| xp_dem_compute | XP_DEM_COMPUTE_ID | 26 |
| xp_dem_close | XP_DEM_CLOSE_ID | 27 |
| xp_dem_get_info | XP_DEM_GET_INFO_ID | 28 |
| xp_dem_id_configure | XP_DEM_ID_CONFIGURE_ID | 29 |
| xp_dem_get_cell_value | XP_DEM_GET_CELL_VALUE_ID | 30 |
| xp_dem_get_cell_geod | XP_DEM_GET_CELL_GEOID_ID | 31 |
| xp_target_inter | XP_TARGET_INTER_ID | 32 |
| xp_target_travel_time | XP_TARGET_TRAVEL_TIME_ID | 33 |
| xp_target_ground_range | XP_TARGET_GROUND_RANGE_ID | 34 |
| xp_target_incidence_angle | XP_TARGET_INCIDENCE_ANGLE_ID | 35 |
| xp_target_range | XP_TARGET_RANGE_ID | 36 |
| xp_target_range_rate | XP_TARGET_RANGE_RATE_ID | 37 |
| xp_target_tangent | XP_TARGET_TANGENT_ID | 38 |
| xp_target_altitude | XP_TARGET_ALTITUDE_ID | 39 |
| xp_target_star | XP_TARGET_STAR_ID | 40 |
| xp_target_station | XP_TARGET_STATION_ID | 41 |
| xp_target_drs | XP_TARGET_DRS_ID | 42 |
| xp_target_generic | XP_TARGET_GENERIC_ID | 43 |
| xp_target_reflected | XP_TARGET_REFLECTED_ID | 44 |
| xp_target_sc | XP_TARGET_SC_ID | 45 |
| xp_multi_target_inter | XP_MULTI_TARGET_INTER_ID | 46 |
| xp_multi_target_travel_time | XP_MULTI_TARGET_TRAVEL_TIME_ID | 47 |
| xp_target_list_inter | XP_TARGET_LIST_INTER_ID | 48 |
| xp_target_extra_vector | XP_TARGET_EXTRA_VECTOR_ID | 49 |
| xp_target_extra_main | XP_TARGET_EXTRA_MAIN_ID | 50 |

| xp_target_extra_ef_target | XP_TARGET_EXTRA_EF_TARGET_ID | 52 |
| xp_target_extra_target_to_sun | XP_TARGET_EXTRA_TARGET_TO_SUN_ID | 53 |
| xp_target_extra_target_to_moon | XP_TARGET_EXTRA_TARGET_TO_MOON_ID | 54 |

| | | |
|--|---|----|
| xp_target_extra_specular_reflection | XP_TARGET_EXTRA_SPECULAR_REFLECTION_ID | 55 |
| xp_target_list_extra_vector | XP_TARGET_LIST_EXTRA_VECTOR_ID | 56 |
| xp_target_list_extra_main | XP_TARGET_LIST_EXTRA_MAIN_ID | 57 |
| xp_target_list_extra_aux | XP_TARGET_LIST_EXTRA_AUX_ID | 58 |
| xp_target_list_extra_ef_target | XP_TARGET_LIST_EXTRA_EF_TARGET_ID | 59 |
| xp_target_list_extra_specular_reflection | XP_TARGET_LIST_EXTRA_SPECULAR_REFLECTION_ID | 60 |
| xp_target_list_extra_target_to_moon | XP_TARGET_LIST_EXTRA_TARGET_TO_SUN_ID | 61 |
| xp_target_list_extra_target_to_sun | XP_TARGET_LIST_EXTRA_TARGET_TO_MOON_ID | 62 |
| xp_target_tangent_sun | XP_TARGET_TANGENT_SUN_ID | 63 |
| xp_target_tangent_moon | XP_TARGET_TANGENT_MOON_ID | 64 |
| xp_target_close | XP_TARGET_CLOSE_ID | 65 |
| xp_gen_dem_max_altitude | XP_GENDEM_MAX_ALTITUDE_ID | 66 |
| xp_gen_dem_altitude_from_ellipsoid | XP_GENDEM_ALTITUDE_FROM_ELLIPSOID_ID | 67 |
| xp_attitude_define | XP_ATTITUDE_DEFINE_ID | 68 |
| xp_attitude_transform | XP_ATTITUDE_TRANSFORM_ID | 69 |
| xp_run_init | XP_RUN_INIT_ID | 70 |
| Error Handling Functions | | |
| xp_verbose | not applicable | |
| xp_silent | | |
| xp_get_code | | |
| xp_get_msg | | |
| xp_print_msg | | |

Notes about the table:

- To transform the extended status flag returned by a CFI function to either a list of error codes or list of error messages, the enumeration value (or the corresponding long value) described in the table must be used
- The error handling functions have no enumerated values

Whenever available it is strongly recommended to use enumeration values rather than integer values.

6.1 Usage hints

The runtime performances of some of the CFI functions are improved to a large extent if they are called two consecutive times keeping constant some of their inputs.

Nevertheless, although the user may not need to call the CFI functions two consecutive times with the same inputs, there are internal functions that are actually called in those conditions, and thus improving the runtime performances of the former.

Thus, the runtime improvement is achieved with any sequence of calls to those CFI functions, not only with a sequence of calls to the same function.

In fact, the time, position, velocity, acceleration vectors, AOCS and mispointing angles do not need to keep exactly constant as long as the difference between two consecutive calls lays within the following thresholds:

- Time: 0.0864 microsec
- Position vector: 0.6e-3 m
- Velocity vector: 0.6e-6 m/s
- Acceleration vector: 0.6e-9 m/s²
- AOCS: 5e-9 deg
- Mispointing angles: 5e-9 deg
- Mispointing angles-rate: 5e-12 deg
- Mispointing angles-rate-rate: 5e-15 deg

Every CFI function has a different length of the Error Vector, used in the calling I/F examples of this SUM and defined at the beginning of the library header file. In order to provide the user with a single value that could be used as Error Vector length for every function, a generic value has been defined (XP_ERR_VECTOR_MAX_LENGTH) as the maximum of all the Error Vector lengths. This value can therefore be safely used for every call of functions of this library.

6.2 General Enumerations

The aim of the current section is to present the enumeration values that can be used rather than integer parameters for some of the input parameters of the EO_POINTING routines, as shown in the table below. The enumerations presented in [GEN_SUM], [F_H_SUM] and [LIB_SUM] are also applicable.

Table 3: Enumerations within EO_POINTING library

| Input | Description | Enumeration value | Long |
|--------------------------|---|-------------------|------|
| Time Initialization Mode | Initialization from file (data-driven) | XP_SEL_FILE | 0 |
| | Initialization within a time range | XP_SEL_TIME | 1 |
| | Initialization within a range of orbits | XP_SEL_ORBIT | 2 |
| | (not used in POINTING) | XP_SEL_DEFAULT | 3 |
| Earth Intersection Mode | No intersection with Earth geoid | XP_NO_INTER | 0 |
| | First intersection with Earth geoid | XP_INTER_1ST | 1 |
| | Second intersection with Earth geoid | XP_INTER_2ND | 2 |

| | | | |
|----------------------------------|--|-------------------------------|----|
| AOCS mode | Geocentric pointing | XP_AOCS_GPM | 0 |
| | Local normal pointing | XP_AOCS_LNP | 1 |
| | Yaw steering + local normal pointing | XP_AOCS_YSM | 2 |
| | Zero-Doppler YSM | XP_AOCS_ZDOPPLER | 3 |
| Satellite Nominal Attitude Model | Generic model | XP_MODEL_GENERIC | 0 |
| | Envisat model | XP_MODEL_ENVISAT | 1 |
| | Cryosat model | XP_MODEL_CRYOSAT | 2 |
| | ADM model | XP_MODEL ADM | 3 |
| | SENTINEL 1 model | XP_MODEL_SENTINEL1 | 4 |
| | SENTINEL 2 model | XP_MODEL_SENTINEL2 | 5 |
| | Geostationary satellite model | XP_MODEL_GEO | 6 |
| | MetOp-SG | XP_MODEL_METOPSG | 7 |
| Axis enumeration | X axis | XP_X_AXIS | 0 |
| | -X axis | XP_NEG_X_AXIS | 1 |
| | Y axis | XP_Y_AXIS | 2 |
| | -Y axis | XP_NEG_Y_AXIS | 3 |
| | Z axis | XP_Z_AXIS | 4 |
| | -Z axis | XP_NEG_Z_AXIS | 5 |
| Axis target | Sun pointing | XP_SUN_VEC | 0 |
| | Moon pointing | XP_MOON_VEC | 1 |
| | Earth pointing | XP_EARTH_VEC | 2 |
| | Nadir pointing | XP_NADIR_VEC | 3 |
| | Inertial velocity pointing | XP_INERTIAL_VEL_VEC | 4 |
| | Earth Fixed velocity pointing | XP_EF_VEL_VEC | 5 |
| | Inertial target pointing | XP_INERTIAL_TARGET_VEC | 6 |
| | Spacecraft Earth Fixed velocity | XP_EF_TARGET_VEC | 7 |
| | Earth Fixed target pointing | XP_SC_EF_VEL_VEC | 8 |
| | Orbit Pole | XP_ORBIT_POLE | 9 |
| | Corrected Satellite Position (ToD) | XP_INERTIAL_POS_VEC_CORRECTED | 10 |
| | Rotated Inertial velocity vector (ToD) | XP_INERTIAL_VEL_VEC_ROTATED | 11 |
| | North (EF) | XP_EF_NORTH | 12 |
| | South (EF) | XP_EF_SOUTH | 13 |
| Mode Flag | Flag for location calculus | XP_MODE_FLAG_LOCATION | 0 |
| | Flag for direction calculus | XP_MODE_FLAG_DIRECTION | 1 |
| Frame Flag | Selection of coordinate frame | XP_FRAME_FLAG_EXT | 0 |
| | Selection of attitude frame | XP_FRAME_FLAG_SAT | 1 |

| | | | |
|--------------------------------|--|----------------------------|------|
| Angle Type | True Latitude (TOD) | XP_ANGLE_TYPE_TRUE_LAT_TOD | 0 |
| | True latitude (EF) | XP_ANGLE_TYPE_TRUE_LAT_EF | 1 |
| Attitude Frame ID | No attitude frame defined | XP_NONE_ATTITUDE | -1 |
| | Satellite Orbital Reference Frame | XP_SAT_ORBITAL_REF | 0 |
| | Satellite Nominal Attitude Frame | XP_SAT_NOMINAL_ATT | 1 |
| | Satellite Attitude Frame | XP_SAT_ATT | 2 |
| | Instrument(s) Attitude Frame(s) | XP_INSTR_ATT | 3 |
| Target Type | User Target | XP_USER_TARGET_TYPE | 0 |
| | Line of Sight Target | XP_LOS_TARGET_TYPE | 1 |
| | DEM Target | XP_DEM_TARGET_TYPE | 2 |
| Source Type | Star | XP_SOURCE_STAR | 0 |
| | Sun | XP_SOURCE_SUN | 1 |
| | Moon | XP_SOURCE_MOON | 2 |
| | Generic source | XP_SOURCE_GENERIC | 3 |
| Atmosphere Initialization Mode | No refraction mode | XP_NO_REF_INIT | 0 |
| | | XP_STD_INIT | 1 |
| | User defined mode (n-z table, see section 10) | XP_USER_INIT | 2 |
| | Predefined LUT mode | XP_PRED_INIT | 3 |
| | Standard refraction mode (US76) | XP_STD_INIT_N | 10 |
| | User defined mode (n-z table, see section 10)) | XP_USER_INIT_N | 20 |
| | Predefined LUT mode | XP_PRED_INIT_N | 30 |
| | User's predefined refraction LUTs | XP_US76_INIT | 300 |
| | | XP_TROPIC_INIT | 301 |
| | | XP_MID_SUM_INIT | 302 |
| | | XP_MID_WIN_INIT | 303 |
| | | XP_SUBAR_SUM_INIT | 304 |
| | | XP_SUBAR_WIN_INIT | 305 |
| | | XP_LUT_INIT | 400 |

| | Target calculated with Multi Travel Time (2nd) function | XP_MULTI_TARGET_TRAVEL_TIME_2ND_MODE | 20 |
| | Target calculated with Target reflected function | XP_TARGET_REFLECTED_MODE | 21 |
| | Target calculated with Target List Inter (1st) function | XP_TARGET_LIST_INTER_1ST_MODE | 22 |
| | Target calculated with Target List Inter (2nd) function | XP_TARGET_LIST_INTER_2ND_MODE | 23 |
| DEM configuration operations | XP_LOAD_TILE_SET | Load a set of tiles identified by a rectangular region | 0 |
| | XP_CLEAR_CACHE | Unload all the tiles in cache but do not free memory | 1 |
| | XP_FREE_CACHE | Unload all the tiles in cache but and free memory | 2 |
| | XP_SET_MAX_SIZE | Set new maximum size for cache | 3 |
| Azimuth elevation type | XP_AZ_EL_LIST | List of azimuth/elevation points | 0 |
| | XP_AZ_EL_STRIP | Strip of points with fixed azimuth | 1 |
| | XP_AZ_EL_GRID | Grid of azimuth/elevation points | 2 |
| Yaw flip attitude configuration | XP_AUTOMATIC_FLIP_MODE | The mode will be updated automatically to Winter or Summer mode | 0 |
| | XP_WINTER_MODE | Yaw flip Winter mode | 1 |
| | XP_SUMMER_MODE | Yaw flip Summer mode | 2 |
| Set of DEM selection | XP_ALL_DEM | All DEM tiles will be computed | 0 |
| | XP_DEM_SET | Only tiles in input range will be computed | 1 |

6.3 Data Structures

The aim of the current section is to present the data structures that are used in the EO_POINTING library. The structures are currently used for the CFI Identifiers accessor functions. The following table show the structures with their names and the data that contain:

Table 4: EO_POINTING structures

| Structure name | Data | | |
|-------------------------------|---------------------|---------------------------------|--|
| | Variable Name | C type | Description |
| xp_param_model_str | model_param | double [XP_NUM_MODEL_PARAM] | Model Parameters |
| | model_enum | long | Model type |
| xp_harmonic_data | num_terms | long [3] | Number of harmonics coefficient(pitch, roll and yaw) |
| | harmonic_type_pitch | long [XP_MAX_NUM_HARMONIC] | Harmonic type |
| | harmonic_type_roll | long [XP_MAX_NUM_HARMONIC] | Harmonic type |
| | harmonic_type_yaw | long [XP_MAX_NUM_HARMONIC] | Harmonic type |
| | harmonic_coef_pitch | double [XP_MAX_NUM_HARMONIC] | Harmonic coefficient |
| | harmonic_coef_roll | double [XP_MAX_NUM_HARMONIC] | Harmonic coefficient |
| | harmonic_coef_yaw | double [XP_MAX_NUM_HARMONIC] | Harmonic coefficient |
| xp_harmonic_model_str | angle_type | long | Angle type |
| | harmonic | xp_harmonic_data | Harmonic data |
| xp_att_data_rec | time_ref | long | Time reference |
| | time | double | Time for the quaternions/angles |
| | quaternion | double [4] | Quaternions |
| | angles | double [3] | Angles |
| | file_model | long | File model |
| xp_sat_nom_att_file_model_str | val_time0 | double | Validity start time |
| | val_time1 | double | Validity stop time |
| | data_type | long | 0 = quaternions 1 = angles |
| | inertial_frame | long | initial reference frame: Inertial reference frame |
| | lines | long | number of records in the attitude lists |

| | | | |
|-----------------------------|------------------|---------------------|--|
| | max_gap | double | Maximum gap between consecutive data |
| | att_data | xp_att_data_rec* | array with the angle/quaternion records |
| xp_angle_model_st | pitch | double | Pitch |
| | roll | double | Roll |
| | yaw | double | Yaw |
| xp_matrix_model_str | att_matrix | double [3][3] | Attitude matrix |
| xp_star_tracker | quaternion[4] | float | Quaternions |
| | time | double | Quaternion time in TAI |
| | status | unsigned char | Quaternions status |
| xp_star_tracker_aux | star_tr_id | long | Star tracker Id (1,2 or 3) |
| | aberr_correction | long | Aberration correction flag: -1 = Aberration correction with transposed matrix 0 = No aberration 1 = Aberration correction |
| | str_att_rot | double [3][3] | Satellite attitude frame to star tracker rotation matrix |
| xp_sat_att_file_model_str | file_model | long | file model |
| | val_time0 | double | Validity start time |
| | val_time1 | double | Validity stop time |
| | data_type | long | 0 = quaternions 1 = angles |
| | inertial_frame | long | initial reference frame |
| | lines | long | number of records in the attitude lists |
| | max_gap | double | Maximum time gap between angles or quaternions |
| | att_data | xp_att_data_rec* | Array with the angle/quaternion records |
| | aux_data | xp_star_tracker_aux | Data from the auxiliary file |
| | tm_data | xp_star_tracker* | Cryosat Star Tracker attitude data |
| xp_instr_att_file_model_str | rot_to_sat | double** | Matrix with the rotation from the frame based on the satellite to the satellite frame. |
| | file_model | long | File model |
| | val_time0 | double | Validity start time |
| | val_time1 | double | Validity stop time |

| | | | |
|--------------------------------|------------------|------------------|---|
| | data_type | long | 0 = quaternions 1 = angles |
| | inertial_frame | long | initial reference frame |
| | lines | long | number of records in the attitude lists |
| | max_gap | double | Maximum gap between quaternions/angles |
| | att_data | xp_att_data_rec* | array with the angle/quaternion records |
| xp_quat_plus_angle _model_str | inertial_frame | long | Inertial reference frame |
| | num_quat | long | Number of quaternions |
| | quat | xd_att_rec* | List of quaternions |
| | angles | double[3] | Rotation angles |
| xp_quat_plus_matri x_model_str | inertial_frame | long | Inertial reference frame |
| | num_quat | long | Number of quaternions |
| | quat | xd_att_rec* | List of quaternions |
| | rot_matrix | double[3][3] | Rotation matrix |
| xp_attitude_id_dat a | model | long | Attitude model |
| | time_ref | long | Time reference |
| | time | double | Time |
| | sat_vector | xl_cord | Satellite vector (EF) |
| | source_frame | long | Source reference frame (according to the extended reference frames enumeration in [LIB_SUM]) |
| | target_frame | long | Target reference frame according to the Attitude Frame ID enumeration, defined in the current document (see Table 3) |
| | sat_mat | xl_cs_tra | Attitude matrix. Provides transformation from source to target frame |
| | offset | double [3] | Instrument offset from initial reference frame |
| | attitude_EF | xl_cs_tra | Attitude matrix in EF: position and orientation of the instrument/satellite frame. |
| xp_atmos_id_data | atm_max_alt_std | double | Standard atmosphere geometric altitude |
| | atm_max_alt_user | double | User atmosphere geometric altitude |
| xp_dem_ace (deprecated) | dir | char [100] | Directory for the the DEM files |
| | res_X | double | Interval between points along X-axis |
| | res_Y | double | Interval between points along Y-axis |

| | res_unit | double | Conversion factor from x,y units to the res_X, res_Y units. for example if res_X is given in seconds and X in degrees => res_unit=3600 | | | | | | | |
|----------------|---------------------------|--------------------|---|-------|-------------|------|---------------------------|--------|---------------------------|---------|
| | X_num_points | long | Number of points along X-axis (columns) | | | | | | | |
| | Y_num_points | long | Number of points along Y-axis (lines) | | | | | | | |
| | x_range | double | Longitude of the x-axis for one file (grid) | | | | | | | |
| | y_range | double | longitude of the y-axis for one file (grid) | | | | | | | |
| | data_size | long | Size in bytes of the data stored in the files | | | | | | | |
| | data_type | long | data type (int, long, float, double) | | | | | | | |
| | north_alt | double[4] | Altitude at the North pole cell | | | | | | | |
| | south_alt | double[4] | Altitude at the South pole cell | | | | | | | |
| xp_dem_id_data | model | long | DEM model | | | | | | | |
| | dem_data | xp_dem_ace * | DEM configuration data (deprecated) | | | | | | | |
| | dem_user_params | xd_dem_user_params | DEM user parameters (see [D_H_SUM]) | | | | | | | |
| | dem_metadata | xd_dem_metadata | DEM metadata (see [D_H_SUM]) | | | | | | | |
| xp_dem_info | dem_model | long | DEM model (according to XD_Dem_model_enum in [D_H_SUM]) | | | | | | | |
| | data_source | long | <p>Source flag. According to the dem_model, the value is one of the following enumerations (see [D_H_SUM]):</p> <ul style="list-style-type: none"> • DEM Data Source Types for GETASSE30 v1, v2 and v3 • DEM Data Source Types for ACE2 • DEM Data Source Types for GDEM v2 • For GDEM v3 the range for the data source is a wide range as follows: <table> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0-50</td> <td>GDEM V3 (0 to 50+ scenes)</td> </tr> <tr> <td>60-110</td> <td>GDEM V2 (0 to 50+ scenes)</td> </tr> <tr> <td>131-184</td> <td>PRISM (1 to 54 scenes)</td> </tr> </tbody> </table> | Value | Description | 0-50 | GDEM V3 (0 to 50+ scenes) | 60-110 | GDEM V2 (0 to 50+ scenes) | 131-184 |
| Value | Description | | | | | | | | | |
| 0-50 | GDEM V3 (0 to 50+ scenes) | | | | | | | | | |
| 60-110 | GDEM V2 (0 to 50+ scenes) | | | | | | | | | |
| 131-184 | PRISM (1 to 54 scenes) | | | | | | | | | |

| | | | |
|-------------------|----------------|------------------|--|
| | | | 201-223 SRTM (1 to 23 swaths) 231 SRTM V3 from initial GDEM V3 232 SRTM V2 from initial GDEM V3 233 SRTM V2 from GDEM V2 234 SRTM with NGA fill from GDEM V2 241 NED from GDEM V2 (USA) 242 NED from initial GDEM V3 (USA) 243 CDED from GDEM V2 (Canada) 244 CDED from initial GDEM V3 (Canada) 245 Alaska DEM from GDEM V2 246 Alaska DEM from initial GDEM V3 250 Interpolated (described in "Reference Data for Number of Scenes Layer" in https://lpdaac.usgs.gov/products/astgt_mv003/) |
| xp_generic_data | time_ref | long | Time reference |
| | time | double | Time |
| | sat_vector | xl_cord | Satellite state vector (see [LIB_SUM]) |
| | iray | long | Refraction model |
| | freq | double | Frequency |
| | deriv | long | Derivative flag according to derivatives enumeration in [LIB_SUM] |
| xp_target_data | tar_vector | xl_cord | target vector |
| | z_tan | xl_par_der | Tangent altitude |
| | range | xl_par_der | target range |
| | time | xl_par_der | time |
| | tar_sat_vector | xl_cord | target to satellite vector |
| | sat_tar_vector | xl_cord | satellite to target vector |
| xp_target_str | num_target | long | Number of targets |
| | target | xp_target_data * | target data |
| xp_target_id_data | generic_data | xp_generic_data | Target generic data |
| | earth_crossed | long | Flag to indicate if the Earth is crossed |
| | atm_crossed | long | Flag to indicate if the atmosphere is crossed |
| | user | xp_target_str | User target |
| | los | xp_target_str | LOS target |

| | | | |
|----------------------------------|-------------------------------|----------------------------------|--|
| | earth | xp_target_str | Earth target |
| | exit_atm_vector | xl_cord | Pointing vector at exit from atmosphere |
| xp_latlon_area | lon_min | double | Minimum longitude of rectangular area |
| | lon_max | double | Maximum longitude of rectangular area |
| | lat_min | double | Minimum latitude of rectangular area |
| | lat_max | double | Maximum latitude of rectangular area |
| xp_dem_id_config | command | long | Operation to be executed (DEM configuration enum) |
| | max_cache_size | long | Maximum cache size (MegaBytes) |
| | area | xp_latlon_area | Rectangular area |
| xp_azimuth_elevation | azimuth | double | Azimuth [deg] |
| | elevation | double | Elevation [deg] |
| | azimuth_rate | double | Azimuth rate [deg/s] |
| | elevation_rate | double | Elevation rate [deg/s] |
| xp_azimuth_elevation_list | num_rec | long | Number of azimuth/elevation points |
| | az_el_list | xp_azimuth_elevation* | Array of azimuth/elevation points |
| xp_azimuth_elevation_strip | azimuth | double | Fixed azimuth of strip [deg] |
| | min_elevation | double | Lower elevation of strip points [deg] |
| | max_elevation | double | Maximum elevation of strip points [deg] |
| | step_elevation | double | Step between elevation points [deg] |
| xp_azimuth_elevation_grid | min_azimuth | double | Lower azimuth of grid points [deg] |
| | max_azimuth | double | Maximum azimuth of grid points [deg] |
| | step_azimuth | double | Step between azimuth points [deg] |
| | min_elevation | double | Lower elevation of grid points [deg] |
| | max_elevation | double | Maximum elevation of grid points [deg] |
| | step_elevation | double | Step between elevation points [deg] |
| xp_azimuth_elevation_input_union | azimuth_elevation_list | xp_azimuth_elevation_list | List of points |
| | azimuth_elevation_strip | xp_azimuth_elevation_strip | Strip of points |
| | azimuth_elevation_grid | xp_azimuth_elevation_grid | Grid of points |
| xp_instrument_data | type | long | Type of instrument data (see Azimuth elevation type enumeration) |
| | azimuth_elevation_input_union | xp_azimuth_elevation_input_union | Azimuth/elevation points |

| | | | |
|-------------------------------------|--------------------------|---------------------------------|--|
| | signal_frequency | double | Signal frequency |
| xp_target_output | num_user_target | long | Number of user targets |
| | num_los_target | long* | Array of length num_user_targets with the number of LOS targets corresponding to every user target |
| xp_target_list_input_info | input_type | long | List/Grid/Strip (see XP_Az_el_type_enum) |
| | azimuth | double | Azimuth used as input to compute the target |
| | elevation | double | Elevation used as input to compute the target |
| | azimuth_idx | long | Azimuth index in azimuth/elevation grid |
| | elevation_idx | long | Elevation index in azimuth/elevation grid |
| xp_target_input_info_union | target_list_input_info | xp_target_list_input_info | Target input information union |
| xp_target_input_info | target_function | long | It defines the function used to compute the target |
| | target_input_info_union | xp_target_input_info_union | Target input information |
| xp_target_extra_vector_results | status | long | Target computation status |
| | target_input_info | xp_target_input_info | Input information used to compute the target |
| | vector_results | double[] | Results |
| | vector_results_rate | double[] | Results rate |
| | vector_results_rate_rate | double[] | Results rate rate |
| xp_target_extra_vector_results_list | num_rec | long | Number of targets computed |
| | extra_vector_results | xp_target_extra_vector_results* | Array with results for every target |
| xp_target_extra_main_results | status | long | Target computation status |
| | target_input_info | xp_target_input_info | Input information used to compute the target |
| | main_results | double[] | Results |
| | main_results_rate | double[] | Results rate |
| | main_results_rate_rate | double[] | Results rate rate |
| xp_target_extra_main_results_list | num_rec | long | Number of targets computed |
| | extra_main_results | xp_target_extra_main_results* | Array with results for every target |

| | | | |
|---|----------------------------------|---|--|
| xp_target_extra_aux_results | status | long | Target computation status |
| | target_input_info | xp_target_input_info | Input information used to compute the target |
| | aux_results | double[] | Results |
| | aux_results_rate | double[] | Results rate |
| | aux_results_rate_rate | double[] | Results rate rate |
| xp_target_extra_aux_results_list | num_rec | long | Number of targets computed |
| | extra_aux_results | xp_target_extra_aux_results* | Array with results for every target |
| xp_target_extra_ef_target_results | status | long | Target computation status |
| | target_input_info | xp_target_input_info | Input information used to compute the target |
| | ef_target_results | double[] | Results |
| | ef_target_results_rate | double[] | Results rate |
| | ef_target_results_rate_rate | double[] | Results rate rate |
| xp_target_extra_ef_target_results_list | num_rec | long | Number of targets computed |
| | extra_ef_target_results | xp_target_extra_ef_target_results* | Array with results for every target |
| xp_target_extra_spec_reflec_target_results | status | long | Target computation status |
| | target_input_info | xp_target_input_info | Input information used to compute the target |
| | spec_reflec_results | double[] | Results |
| | spec_reflec_results_rate | double[] | Results rate |
| | spec_reflec_results_rate_rate | double[] | Results rate rate |
| xp_target_extra_spec_reflec_target_results_list | num_rec | long | Number of targets computed |
| | extra_spec_reflec_target_results | xp_target_extra_spec_reflec_target_results* | Array with results for every target |
| xp_target_extra_moon_target_results | status | long | Target computation status |
| | target_input_info | xp_target_input_info | Input information used to compute the target |
| | moon_results | double[] | Results |
| | moon_rate | double[] | Results rate |
| | moon_rate_rate | double[] | Results rate rate |
| xp_target_extra_moon_target_results_list | num_rec | long | Number of targets computed |
| | extra_moon_target_results | xp_target_extra_moon_target_results* | Array with results for every target |
| xp_target_extra_su | status | long | Target computation status |

| | | | |
|--------------------------------------|--------------------------|-------------------------------------|---|
| n_target_results | target_input_info | xp_target_input_info | Input information used to compute the target |
| | sun_results | double[] | Results |
| | sun_rate | double[] | Results rate |
| | sun_rate_rate | double[] | Results rate rate |
| xp_target_extra_sun_target_results | num_rec | long | Number of targets computed |
| | extra_sun_target_results | xp_target_extra_sun_target_results* | Array with results for every target |
| xp_gen_dem_alt_from_ellipsoid_inputs | set_type | long | DEM set selected for computation (see DEM set enum) |
| | lon_min | double | Minimum longitude of DEM set |
| | lon_max | double | Maximum longitude of DEM set |
| | lat_min | double | Minimum latitude of DEM set |
| | lat_max | double | Maximum latitude of DEM set |
| | verbose | long | If == 0, no log message will be printed. If > 0, a log message will be printed every "verbose" points processed in DEM. |
| xp_attitude_def | type | long | Attitude type. Possible values: XP_NONE_ATTITUDE: No attitude defined XP_SAT_NOMINAL_ATT: Satellite Nominal attitude target. XP_SAT_ATT: Satellite attitude target. XP_INSTR_ATT: Instrument attitude target. |
| | sat_nom_trans_id | xp_sat_nom_trans_id | Satellite Nominal attitude |
| | sat_trans_id | xp_sat_trans_id | Satellite attitude target |
| | instr_trans_id | xp_instr_trans_id | Instrument attitude target |
| | ref_frame | long | New reference frame. See enumeration "Reference frame" in [D_H_SUM] |
| xp_transform_cfg | time_id | xl_time_id | Time Id. |
| | model_id | xl_model_id | Model Id. |

7 CFI FUNCTIONS DESCRIPTION

The following sections describe each CFI function.

The calling interfaces are described for C users.

Input and output parameters of each CFI function are described in tables, where C programming language syntax is used to specify:

- Parameter types (e.g. long, double)
- Array sizes of N elements (e.g. param[N])
- Array element M (e.g. [M])

7.1 xp_sat_nominal_att_init

7.1.1 Overview

The **xp_sat_nominal_att_init** CFI function initialises the AOCS mode for a given satellite. The initialised mode will be stored in the *sat_nom_trans_id* output structure.

7.1.2 Calling Interface

The calling interface of the **xp_sat_nominal_att_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long aocs_mode;
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    long ierr[XP_NUM_ERR_NOM_ATT_INIT_DEF], status;

    status = xp_sat_nominal_att_init(&aocs_mode,
                                    &sat_nom_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_NOM_ATT_INIT** constant is defined in the file *explorer_pointing.h*.

7.1.3 Input Parameters

The `xp_sat_nominal_att_init` CFI function has the following input parameters:

Table 5: Input parameters of `xp_sat_nominal_att_init` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------|--------|---------------|-------------------------|---------------|---------------|
| aocs_mode | long * | - | AOCS Mode ID | - | Complete |

It is possible to use enumeration values rather than integer values for some of the input arguments:
 AOCS Mode ID: `aocs_mode`. See current document, Table 3.

7.1.4 Output Parameters

The output parameters of the `xp_sat_nominal_att_init` CFI function are:

Table 6: Output parameters of `xp_sat_nominal_att_init`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------------|-----------------------------------|---------------|--|---------------|---------------|
| <code>sat_nom_trans_id</code> | <code>xp_sat_nom_trans_id*</code> | - | Structure that contains the Satellite nominal Transformation | - | - |
| <code>ierr</code> | long | - | Error vector | - | - |

7.1.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_nominal_att_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_nominal_att_init` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM])

Table 7: Error messages of `xp_sat_nominal_att_init` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | <code>XP_CFI_SAT_NOMINAL_ATT_INIT_MEMORY_ERR</code> | 0 |

7.2 xp_sat_nominal_att_init_model

7.2.1 Overview

The **xp_sat_nominal_att_init_model** CFI function initialises the satellite nominal attitude model for a given satellite. The initialised model will be stored in the *sat_nom_trans_id* output structure.

7.2.2 Calling Interface

The calling interface of the **xp_sat_nominal_att_init_model** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long model_enum;
    double model_param[XP_NUM_MODEL_PARAM];
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_NOM_ATT_INIT_MODEL], status;

    status = xp_sat_nominal_att_init_model(&model_enum,
                                           model_param,
                                           &sat_nom_trans_id, ierr);
}
```

The `XP_NUM_ERR_SAT_NOM_ATT_INIT_MODEL` and `XP_NUM_MODEL_PARAM` constants are defined in the file *explorer_pointing.h*.

7.2.3 Input Parameters

The `xp_sat_nominal_att_init_model` CFI function has the following input parameters:

Table 8: Input parameters of xp_sat_nominal_att_init_model function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|--------|---------------|----------------------------|---------------|---------------|
| model_enum | long * | - | Sat Nom Attitude Model ID | - | Complete |
| model_param | double | - | Model dependant parameters | - | Complete |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Satellite Nominal Attitude Model ID: `model_enum`. See current document, Table 3.
- Model dependant parameters: `model_param`. See current document, Table 9.

Table 9: Model parameters depending on the attitude model

| Attitude Model | Array Element | Description (Reference) | Unit (Format) |
|--------------------|---------------|---|---------------|
| XP_MODEL_GENERIC | [0] | First Axis enumeration value | - |
| | [1] | First Target enumeration value | - |
| | [2] | First Vector[0] | - or deg |
| | [3] | First Vector[1] | - or deg |
| | [4] | First Vector[2] | - or deg |
| | [5] | Second Axis enumeration value | |
| | [6] | Second Target enumeration value | |
| | [7] | Second Vector[0] | - or deg |
| | [8] | Second Vector[1] | - or deg |
| | [9] | Second Vector[2] | - or deg |
| XP_MODEL_ENVISAT | [0] | AOCS Cx parameter [pitch] | deg |
| | [1] | AOCS Cy parameter [roll] | deg |
| | [2] | AOCS Cz parameter [yaw] | deg |
| XP_MODEL_CRYOSAT | [0] | Local Normal Z Coefficient | - |
| XP_MODEL_ADMIN | [0] | Scan Angle | deg |
| | [1] | Scan Limit | deg |
| | [2] | Velocity Offset | m/s |
| XP_MODEL_SENTINEL1 | [0] | Local Normal Coefficient | - |
| | [1] | Earth's angular velocity vector | rad/s |
| | [2] | Antenna bore sight off nadir angle at reference altitude (Θ_{ref}) | deg |

| | | | |
|--------------------|------|--|--------|
| | [3] | Reference altitude (H_{ref}) | km |
| | [4] | Roll steering sensitivity versus altitude (α_{roll}) | deg/km |
| | [5] | h_0 | m |
| | [6] | h_1 | m |
| | [7] | h_2 | m |
| | [8] | h_3 | m |
| | [9] | h_4 | m |
| | [10] | φ_1 | rad |
| | [11] | φ_2 | rad |
| | [12] | φ_3 | rad |
| | [13] | φ_4 | rad |
| XP_MODEL_SENTINEL2 | [0] | Earth's angular velocity vector | rad/s |
| XP_MODEL_GEO | [0] | Flag (enumeration values can be used): XP_AUTOMATIC_FLIP_MODE = enable the automatic Yaw Flip XP_WINTER_MODE = Winter XP_SUMMER_MODE = Summer | - |
| XP_MODEL_METOPSG | [0] | Local Normal Coefficient | - |
| | [1] | Earth's angular velocity vector | rad/s |

7.2.3.1 Generic Model description

The generic model builds the reference frames from the specified direction vectors.

The model parameters are:

- first_axis: It can be any of {XP_X_AXIS, XP_NEG_X_AXIS, XP_Y_AXIS, XP_NEG_Y_AXIS, XP_Z_AXIS, XP_NEG_Z_AXIS}
- first_target: It can be any of {XP_SUN_VEC, XP_MOON_VEC, XP_EARTH_VEC, XP_NADIR_VEC, XP_INERTIAL_VEL_VEC, XP_EF_VEL_VEC, XP_INERTIAL_TARGET_VEC, XP_EF_TARGET_VEC, XP_SC_EF_VEL_VEC, XP_ORBIT_POLE, XP_INERTIAL_POS_VEC_CORRECTED, XP_INERTIAL_VEL_VEC_ROTATED, XP_EF_NORTH, XP_EF_SOUTH}
- first_vector[3]: contains either:
 - dummies
 - [long, lat, alt] if first target = XP_EF_TARGET_VEC
 - [ra, decl, parallax] if first target = XP_INERTIAL_TARGET_VEC
 - correction coefficients if first target = XP_INERTIAL_POS_VEC_CORRECTED
 - rotation vector if first target = XP_INERTIAL_VEL_VEC_ROTATED

- second_axis: It can be any of {XP_X_AXIS, XP_NEG_X_AXIS, XP_Y_AXIS, XP_NEG_Y_AXIS, XP_Z_AXIS, XP_NEG_Z_AXIS}
- second_target: : It can be any of {XP_SUN_VEC, XP_MOON_VEC, XP_EARTH_VEC, XP_NADIR_VEC, XP_INERTIAL_VEL_VEC, XP_EF_VEL_VEC, XP_INERTIAL_TARGET_VEC, XP_EF_TARGET_VEC, XP_SC_EF_VEL_VEC, XP_ORBIT_POLE, XP_INERTIAL_POS_VEC_CORRECTED, XP_INERTIAL_VEL_VEC_ROTATED, XP_EF_NORTH, XP_EF_SOUTH}
- second_vector[3]: contains either:
 - dummies
 - [long, lat, alt] if second target= XP_EF_TARGET_VEC
 - [ra, decl, parallax] if second target=XP_INERTIAL_TARGET_VEC
 - correction coefficients if second target=XP_INERTIAL_POS_VEC_CORRECTED
 - rotation vector if second target = XP_INERTIAL_VEL_VEC_ROTATED

It is necessary to define a convention for each target type (e.g, always from Satellite to XXX):

- XP_SUN_VEC: Unit direction vector from Satellite to Sun
- XP_MOON_VEC: Unit direction vector from Satellite to Moon
- XP_EARTH_VEC: Unit direction vector from Satellite to Earth centre (opposite to Satellite Position Vector)
- XP_NADIR_VEC: Unit direction vector from Satellite to Nadir point
- XP_INERTIAL_VEL_VEC: Inertial Velocity vector (in TOD)
- XP_EF_VEL_VEC: Earth Fixed Velocity vector
- XP_INERTIAL_TARGET_VEC: Unit direction vector from Satellite to a target defined by a given [ra, decl, parallax]. The annual parallax is used in case we are pointing to a close object (for instance, the Moon), in order to get the distance. For stars, parallax=0 shall be used, meaning infinite distance. Units: degrees
- XP_EF_TARGET_VEC: Unit direction vector from Satellite to a target defined by a given [long, lat, alt]
- XP_SC_EF_VEL_VEC: Satellite Earth Fixed Velocity vector
- XP_ORBIT_POLE: Unit direction vector normal to the orbital plane (computed as the cross product of the Satellite Position vector and its Velocity vector)
- XP_INERTIAL_POS_VEC_CORRECTED: Unit Satellite position vector in ToD corrected by coefficients (e.g to approximate the local normal direction)
- XP_INERTIAL_VEL_VEC_ROTATED: Inertial Velocity vector in ToD rotated (e.g correcting for the Earth rotation)
- XP_EF_NORTH: Unit direction vector pointing North (in Earth Fixed)
- XP_EF_SOUTH: Unit direction vector pointing South (in Earth Fixed)

With these parameters, the calculation is done as follows:

- Compute the unit direction vector specified by first_target
 - Assign the calculated first target vector to the first axis vector
- Compute the unit direction vector specified by second_target
 - Cross-product of the first axis vector and the second target vector
 - Assign the resulting vector to the second axis vector
 - Complete the right-handed frame

The following are some examples:

Sun-Fixed Reference Frame

- model_param = {XP_X_AXIS, XP_SUN_VEC, 0.0, 0.0, 0.0, XP_Z_AXIS, XP_EARTH_VEC, 0.0, 0.0, 0.0}

Then:

- X-axis = Unit vector from Satellite to Sun (Sun Vector)
- Z-axis = Unit cross product: X-axis x (Unit vector from Satellite to Earth (Earth Vector))
- Y-axis = Z-axis x X-axis (completing the right-handed frame)

Yaw Steering Mode

- model_param={XP_NEG_Z_AXIS, XP_NADIR_VEC, 0.0, 0.0, 0.0, XP_X_AXIS, XP_SC_EF_VEL_VEC, 0.0, 0.0, 0.0}

Then:

- Z-axis = -(Unit vector from Satellite to Nadir (Nadir Vector))
- X-axis = Unit cross product: Z-axis x (Satellite Earth-Fixed Velocity Vector)
- Y-axis = Z-axis x X-axis (completing the right-handed frame)

7.2.3.2 Sentinel-1 Model parameters description

The parameters for the Sentinel-1 attitude model corresponds to the roll steering law:

$$\theta_{\text{offNadir}} = \theta_{\text{ref}} - \alpha_{\text{roll}} (H - H_{\text{ref}})$$

where the actual altitude of the satellite is approximated by the harmonic function:

$$H(t) = h_0 + \sum_{n=1}^N h_n \cdot \sin(n \cdot \omega_{\text{orb}} \cdot (t - t_{\text{ANX}}) + \phi_n)$$

The first four terms of the series are considered.

Consult [MSC] for more information.

7.2.3.3 Sentinel-2 Model description

Sentinel 2 model is implemented as generic model with the following definitions:

- First axis: XP_NEG_Z_AXIS; first target = XP_EARTH_VEC.
- Second axis: XP_X_AXIS; second target = XP_INERTIAL_VEL_VEC_ROTATED

7.2.3.4 Yaw flip attitude Model description

Yaw Flip model is implemented as generic model with the following definitions:

1. For WINTER mode:

- First axis: XP_NEG_Z_AXIS; first target = XP_NADIR_VEC.
- Second axis: XP_X_AXIS; second target = XP_EF_SOUTH

2. For SUMMER mode:

- First axis: XP_NEG_Z_AXIS; first target = XP_NADIR_VEC.

- Second axis: XP_X_AXIS; second target = XP_EF_NORTH

3. For AUTOMATIC Yaw Flip, the attitude is set to WINTER or SUMMER mode depending on the Sun position: if the Sun position is above the equatorial plane, SUMMER mode is selected; if the Sun position is below the equatorial plane, WINTER mode is selected.

7.2.3.5 MetOp-SG Model description

MetOp-SG model is identical to the ideal YSM law with the following definitions:

- The Z axis that is computed with an approximation for the local normal vector using an altitude dependent correction factor.
- The input parameters are the local normal coefficient and the Earth's rotation speed.
- First axis: XP_Z_AXIS; first target = XP_INERTIAL_POS_VEC_CORRECTED
- Second axis: XP_X_AXIS; second target = XP_INERTIAL_VEL_VEC_ROTATED

7.2.4 Output Parameters

The output parameters of the `xp_nominal_att_init_model` CFI function are:

Table 10: Output parameters of xp_sat_nominal_att_init_model

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-----------------------------------|---------------|--|---------------|---------------|
| sat_nom_trans_id | <code>xp_sat_nom_trans_id*</code> | - | Structure that contains the Satellite nominal Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.2.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_nominal_att_init_model` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_nominal_att_init_model` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM])

Table 11: Error messages of xp_sat_nominal_att_init_model function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | <code>XP_CFI_SAT_NOMINAL_ATT_INIT_MODEL_MEMORY_ERR</code> | 0 |

| | | | | |
|--|--|--|--|--|
| | | | | |
|--|--|--|--|--|

7.3 xp_sat_nominal_att_init_harmonic

7.3.1 Overview

The **xp_sat_nominal_init_harmonic** CFI function initialises the satellite orbital to satellite nominal attitude mispointing angles (i.e. roll, pitch, yaw) for a given satellite with a user-provided set of values. The initialised values will be stored in the *sat_nom_trans_id* output structure.

The mispointing angle (attitude angle in the formula) will be calculated by functions using such *sat_nominal_trans_id* (i.e. *xp_attitude_compute* or *xp_change_frame*) according to the following formula (the "angle" variable will be calculated as in *xl_position_on_orbit* (see [LIB_SUM]), using as inputs:

- the input state vector in EF passed to such functions;
- the angle_type passed as input to *xp_sat_nominal_att_init_harmonic*.

7.3.2 Calling Interface

The calling interface of the **xp_sat_nominal_att_init_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long angle_type, num_terms[3];
    long harmonic_type_pitch[XP_MAX_NUM_HARMONIC],
        harmonic_type_roll[XP_MAX_NUM_HARMONIC],
        harmonic_type_yaw[XP_MAX_NUM_HARMONIC];
    double harmonic_coef_pitch[XP_MAX_NUM_HARMONIC],
        harmonic_coef_roll[XP_MAX_NUM_HARMONIC],
        harmonic_coef_yaw[XP_MAX_NUM_HARMONIC];
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_NOM_ATT_INIT_HARMONIC], status;

    status =      xp_sat_nominal_att_init_harmonic(&angle_type,
                                                num_terms,
                                                harmonic_type_pitch,
                                                harmonic_type_roll,
                                                harmonic_type_yaw,
                                                harmonic_coef_pitch,
                                                harmonic_coef_roll,
                                                harmonic_coef_yaw,
                                                &sat_nom_trans_id,
```

```
ierr);  
}
```

The XP_NUM_ERR_SAT_NOM_ATT_INIT_HARMONIC and XP_MAX_NUM_HARMONIC constants are defined in the file *explorer_pointing.h*.

7.3.3 Input Parameters

The `xp_sat_nominal_att_init_harmonic` CFI function has the following input parameters:

Table 12: Input parameters of xp_sat_nominal_att_init_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------|---------------------------|---------------|--|---------------|---|
| angle_type | long * | - | Type of angle | - | XP_ANGLE_TYP E_TRUE_LAT_T OD XP_ANGLE_TYP E_TRUE_LAT_EF |
| num_terms[3] | long | [0] | Number of elements used in vectors harmonic_type_pitch and harmonic_coef_pitch | - | >=0 |
| | | [1] | Number of elements used in vectors harmonic_type_roll and harmonic_coef_roll | - | >=0 |
| | | [2] | Number of elements used in vectors harmonic_type_yaw and harmonic_coef_yaw | - | >=0 |
| harmonic_type_pitch | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | - | |
| harmonic_type_roll | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | - | - |
| harmonic_type_yaw | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) | - | - |

| | | | | | |
|---------------------|--------------------------------|-----|---|-----|---|
| | | | >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | | |
| harmonic_coef_pitch | dou ble[XP_MA_X_NUM_HA_RMONIC] | all | Bias, sinus and cosinus coefficients for the pitch angle | deg | - |
| harmonic_coef_roll | dou ble[XP_MA_X_NUM_HA_RMONIC] | all | Bias, sinus and cosinus coefficients for the roll angle | deg | - |
| harmonic_coef_yaw | dou ble[XP_MA_X_NUM_HA_RMONIC] | all | Bias, sinus and cosinus coefficients for the yaw angle | deg | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Angle Type: See current document, Table 3.

7.3.4 Output Parameters

The output parameters of the `xp_sat_nominal_att_init_harmonic` CFI function are:

Table 13: Output parameters of xp_sat_nominal_att_init_harmonic

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-----------------------------------|---------------|--|---------------|---------------|
| sat_nom_trans_id | <code>xp_sat_nom_trans_id*</code> | - | Structure that contains the Satellite nominal Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.3.5 Example

For the satellite ERS:

```
pitch = -0.16725*cos(true_lat)*sin(true_lat)*2=-0.16725*sin(2*true_lat)
```

```
num_terms[0]=1
```

```
harmonic_type_pitch={-2} harmonic_coef_pitch={-0.16725}
```

```
roll = 0.05012*sin(true_lat)
```

```
num_terms[1]=1
```

```
harmonic_type_roll={-1} harmonic_coef_roll={0.05012}
```

```

yaw= 3.9163*cos(true_lat)
num_terms[2]=1
harmonic_type_yaw={+1} harmonic_coef_yaw={3.9163}

```

7.3.6 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_nominal_att_init_harmonic` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_nominal_att_init_harmonic` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM])

Table 14: Error messages of xp_sat_nominal_att_init_harmonic function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_INIT_HARMONIC_MEMORY_EEE | 0 |

7.4 xp_sat_nominal_att_init_file

7.4.1 Overview

The **xp_sat_nominal_att_init_file** CFI function initialises the satellite nominal attitude rotation for a given satellite reading values from the attitude file(s). The validity time or orbital range for the attitude angles can be specified by the user. The initialised values will be stored in the *sat_nom_trans_id* output structure.

The computed rotation will be given between the inertial reference frame specified in the file (tag <Reference_Frame>) and the satellite nominal attitude frame. In case that the files contain rotation angles (pitch, roll, yaw) and if the reference frame is based on the satellite (“SATELLITE_ACTUAL”, “SATELLITE” or “SATELLITE_RELATIVE”), then the rotation will be defined between the satellite orbital frame and the satellite nominal attitude frame.

In order to read files, **xp_sat_nominal_att_init_file** function internally uses Data Handling functions. Please refer to [D_H_SUM], in particular sections 4.2 and 4.3, for further details.

7.4.2 Calling Interface

The calling interface of the **xp_sat_nominal_att_init_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_time_id time_id = {NULL};
    long n_files, time_init_mode, time_ref;
    char **attitude_file;
    double time0, time1;
    double val_time0, val_time1;
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_NOM_ATT_INIT_FILE], status;

    status = xp_sat_nominal_att_init_file(&time_id, &n_files,
                                          attitude_file, &time_init_mode, &time_ref, &time0, &time1,
                                          &val_time0, &val_time1, &sat_nom_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_NOM_ATT_INIT_FILE** constant is defined in the file *explorer_pointing.h*.

7.4.3 Input Parameters

The `xp_sat_nominal_att_init_file` CFI function has the following input parameters:

Table 15: Input parameters of xp_sat_nominal_att_init_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|-------------|---------------|--|----------------------------------|--|
| time_id | xl_time_id* | - | Structure that contains the time correlations. | - | - |
| n_files | long * | - | Number of reference data files | - | > 0 |
| attitude_file | char ** | - | Filenames of the reference data files. In case multiple files are used, the files should be time ordered and all files should be of the same type. The supported Attitude File format are: - Generic Attitude File. - Attitude Ephemeris Message Files. In this case only one file is allowed and only the first segment of the file is taken for the initialisation. Those files are described in [D_H_SUM]. | - | - |
| time_init_mode | long * | - | Flag for selecting the time range of the initialization. | - | Select either: · XP_SEL_TIME · XP_SEL_FILE |
| time_ref | long * | - | Time reference ID | - | Complete |
| time0 | double* | - | If: <code>time_init_mode=XP_SEL_TIME</code> Start of the time range defined by[time0,time1] | Decimal days (Processing format) | [-18262.0,36524.0] |
| time1 | double* | - | If: <code>time_init_mode=XP_SEL_TIME</code> End of the time range defined by [time0,time1] | Decimal days (Processing format) | [-18262.0,36524.0] > time0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Time Reference ID: `time_ref`. See [GEN_SUM].
- Time Init Mode ID: `time_init_mode`. See current document, Table 3.

7.4.4 Output Parameters

The output parameters of the `xp_sat_nominal_att_init_file` CFI function are:

Table 16: Output parameters of xp_sat_nominal_att_init_file

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|----------------------|---------------|--|----------------------------------|--------------------|
| val_time0 | double* | - | Validity start time of the initialization | Decimal days (Processing format) | [-18262.0,36524.0] |
| val_time1 | double* | - | Validity end time of the initialization | Decimal days (Processing format) | [-18262.0,36524.0] |
| sat_nom_trans_id | xp_sat_nom_trans_id* | - | Structure that contains the Satellite nominal Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.4.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_nominal_att_init_file` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_nominal_att_init_file` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 17: Error messages of xp_sat_nominal_att_init_file function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--------------------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_INIT_FILE_MEMORY_ERR | 0 |
| ERR | Wrong input time reference | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_INIT_FILE_WRONG_TIME_REF_ERR | 1 |
| ERR | Error opening attitude file: %s | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_INIT_FILE_OPEN_FILES_ERR | 2 |
| ERR | Error reading generic attitude files | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_INIT_FILE_READ_ATT_FI | 3 |

| | | | LES_ERR | |
|------|---|--|---|---|
| ERR | Could not perform a time transformation | No calculation performed | XP_CFI_SAT_NOMINAL_AT_T_INIT_FILE_TIME_CONV_ERR | 4 |
| ERR | Unsupported attitude file format detected | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_IN_IT_FILE_WRONG_FILE_FORMAT_ERR | 5 |
| WARN | AEM with more than 1 segment used for initialization. Only 1st segment will be used | Attitude is initialised using the 1 st segment in the AEM file. | XP_CFI_SAT_NOMINAL_ATT_IN_IT_FILE_ONLY_SEGMENT0_WARN | 6 |

7.5 xp_sat_nominal_att_close

7.5.1 Overview

The **xp_sat_nominal_att_close** CFI function cleans up any memory allocation performed by the satellite nominal attitude initialization functions.

7.5.2 Calling Interface

The calling interface of the **xp_sat_nominal_att_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_NOM_ATT_CLOSE], status;

    status =     xp_sat_nominal_att_close(&sat_nom_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_NOM_ATT_CLOSE** constant is defined in the file *explorer_pointing.h*.

7.5.3 Input Parameters

The `xp_sat_nominal_att_close` CFI function has the following input parameters:

Table 18: Input parameters of `xp_sat_nominal_att_close` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------------|-----------------------------------|---------------|---|---------------|---------------|
| <code>sat_nom_trans_id</code> | <code>xp_sat_nom_trans_id*</code> | - | Structure that contains the Satellite Nom. Trans. | - | - |

7.5.4 Output Parameters

The output parameters of the `xp_sat_nominal_att_close` CFI function are:

Table 19: Output parameters of `xp_sat_nominal_att_close`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------|-------------------|---------------|-------------------------|---------------|---------------|
| <code>ierr</code> | <code>long</code> | - | Error vector | - | - |

7.5.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_nominal_att_close` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_nominal_att_close` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 20: Error messages of `xp_sat_nominal_att_close` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---|----------|
| ERR | Could not close the Id. as it is not initialized or it is being used | No calculation performed | XP_CFI_SAT_NOMINAL_ATT_CLOSE_WRONG_ID_ERR | 0 |

7.6 xp_sat_nominal_att_get_aocs

7.6.1 Overview

The **xp_sat_nominal_att_get_aocs** CFI function returns AOCS mode used for the satellite nominal attitude initialization.

7.6.2 Calling interface

The calling interface of the **xp_sat_nominal_att_get_aocs** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status, aocs_model;
    status = xp_sat_nominal_att_get_aocs (&sat_nom_trans_id,
                                          &aocs_model);
}
```

7.6.3 Input parameters

The **xp_sat_nominal_att_get_aocs** CFI function has the following input parameters:

Table 21: Input parameters of xp_sat_nominal_att_get_aocs function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|---------------------------|---------------|--------------------------------------|---------------|---------------|
| sat_nom_tr ans_id | xp_sat_nom_tr ans_id * | - | Satellite nominal transformation ID. | - | - |

7.6.4 Output parameters

The output parameters of the **xp_sat_nominal_att_get_aocs** CFI function are:

Table 22: Output parameters of xp_sat_nominal_att_get_aocs function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_nominal_att _get_aocs | long | - | Status flag | - | - |
| aocs_model | long | - | AOCS model | - | - |

| | | | | | |
|--|--|--|--|--|--|
| | | | | | |
|--|--|--|--|--|--|

7.6.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.7 xp_sat_nominal_att_set_aocs

7.7.1 Overview

The **xp_sat_nominal_att_set_aocs** CFI function changes the AOCS mode used for the satellite nominal attitude initialization.

7.7.2 Calling interface

The calling interface of the **xp_sat_nominal_att_set_aocs** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status, aocs_model;
    status = xp_sat_nominal_att_set_aocs (&sat_nom_trans_id,
                                          &aocs_model);
}
```

7.7.3 Input parameters

The **xp_sat_nominal_att_set_aocs** CFI function has the following input parameters:

Table 23: Input parameters of xp_sat_nominal_att_set_aocs function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-----------------------|---------------|--|---------------|---------------|
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |
| aocs_model | long | - | AOCS model | - | - |

7.7.4 Output parameters

The output parameters of the **xp_sat_nominal_att_set_aocs** CFI function are:

Table 24: Output parameters of xp_sat_nominal_att_set_aocs function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_nominal_att | long | - | Status flag | - | - |

| _set_aocs | | | | | |
|------------------|-----------------------|---|--|---|---|
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |

7.7.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.8 xp_sat_nominal_att_get_param

7.8.1 Overview

The **xp_sat_nominal_att_get_param** CFI function returns parameters used for the satellite nominal attitude initialization.

7.8.2 Calling interface

The calling interface of the **xp_sat_nominal_att_get_param** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status;
    xp_param_model_str data;
    status = xp_sat_nominal_att_get_param (&sat_nom_trans_id,
                                            &data);
}
```

7.8.3 Input parameters

The **xp_sat_nominal_att_get_param** CFI function has the following input parameters:

Table 25: Input parameters of xp_sat_nominal_att_get_param function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|---------------------------|---------------|--------------------------------------|---------------|---------------|
| sat_nom_tr ans_id | xp_sat_nom_tr ans_id * | - | Satellite nominal transformation ID. | - | - |

7.8.4 Output parameters

The output parameters of the **xp_sat_nominal_att_get_param** CFI function are:

Table 26: Output parameters of xp_sat_nominal_att_get_param function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_nominal_att _get_param | long | - | Status flag | - | - |

| | | | | | |
|------|------------------------|---|---------------------------------|---|---|
| data | xp_param_mode l_str | - | Attitude initialization data | - | - |
|------|------------------------|---|---------------------------------|---|---|

7.8.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.9 xp_sat_nominal_att_set_param

7.9.1 Overview

The **xp_sat_nominal_att_set_param** CFI function changes the parameters used for the satellite nominal attitude initialization.

7.9.2 Calling interface

The calling interface of the **xp_sat_nominal_att_set_param** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status;
    xp_param_model_str data;
    status = xp_sat_nominal_att_set_param (&sat_nom_trans_id,
                                            &data);
}
```

7.9.3 Input parameters

The **xp_sat_nominal_att_set_param** CFI function has the following input parameters:

Table 27: Input parameters of xp_sat_nominal_att_set_param function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-----------------------|---------------|--|---------------|---------------|
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |
| data | xp_param_model_str | - | Attitude initialization data | - | - |

7.9.4 Output parameters

The output parameters of the **xp_sat_nominal_att_set_param** CFI function are:

Table 28: Output parameters of xp_sat_nominal_att_set_param function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------------------|-----------------------|---------------|--|---------------|---------------|
| xp_sat_nominal_att_set_param | long | - | Status flag | - | - |
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |

7.9.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.10 xp_sat_nominal_att_get_harmonic

7.10.1 Overview

The **xp_sat_nominal_att_get_harmonic** CFI function returns harmonic data used for the satellite nominal attitude initialization.

7.10.2 Calling interface

The calling interface of the **xp_sat_nominal_att_get_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status;
    xp_harmonic_model_str data;
    status = xp_sat_nominal_att_get_harmonic (&sat_nom_trans_id,
                                              &data);
}
```

7.10.3 Input parameters

The **xp_sat_nominal_att_get_harmonic** CFI function has the following input parameters:

Table 29: Input parameters of xp_sat_nominal_att_get_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|---------------------------|---------------|--------------------------------------|---------------|---------------|
| sat_nom_tr ans_id | xp_sat_nom_tr ans_id * | - | Satellite nominal transformation ID. | - | - |

7.10.4 Output parameters

The output parameters of the **xp_sat_nominal_att_get_harmonic** CFI function are:

Table 30: Output parameters of xp_sat_nominal_att_get_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_nominal_att _get_harmonic | long | - | Status flag | - | - |

| | | | | | |
|------|---------------------------|---|---------------------------------|---|---|
| data | xp_harmonic_m odel_str | - | Attitude initialization data | - | - |
|------|---------------------------|---|---------------------------------|---|---|

7.10.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.11 xp_sat_nominal_att_set_harmonic

7.11.1 Overview

The **xp_sat_nominal_att_set_harmonic** CFI function changes the harmonic data used for the satellite nominal attitude initialization.

7.11.2 Calling interface

The calling interface of the **xp_sat_nominal_att_set_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status;
    xp_harmonic_model_str data;
    status = xp_sat_nominal_att_set_harmonic (&sat_nom_trans_id,
                                                &data);
}
```

7.11.3 Input parameters

The **xp_sat_nominal_att_set_harmonic** CFI function has the following input parameters:

Table 31: Input parameters of xp_sat_nominal_att_set_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|---------------------------|---------------|--|---------------|---------------|
| sat_nom_tr ans_id | xp_sat_nom_tr ans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |
| data | xp_harmonic_ model_str | - | Attitude initialization data | - | - |

7.11.4 Output parameters

The output parameters of the **xp_sat_nominal_att_set_harmonic** CFI function are:

Table 32: Output parameters of xp_sat_nominal_att_set_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------------------|-----------------------|---------------|--|---------------|---------------|
| xp_sat_nominal_att_set_harmonic | long | - | Status flag | - | - |
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |

7.11.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.12 xp_sat_nominal_att_get_file

7.12.1 Overview

The **xp_sat_nominal_att_get_file** CFI function returns initialization data from the satellite nominal attitude Id. when it was initialised with a file.

7.12.2 Calling interface

The calling interface of the **xp_sat_nominal_att_get_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status;
    xp_file_model_str data;
    status = xp_sat_nominal_att_get_file (&sat_nom_trans_id,
                                          &data);
}
```

7.12.3 Input parameters

The **xp_sat_nominal_att_get_file** CFI function has the following input parameters:

Table 33: Input parameters of xp_sat_nominal_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|---------------------------|---------------|--------------------------------------|---------------|---------------|
| sat_nom_tr ans_id | xp_sat_nom_tr ans_id * | - | Satellite nominal transformation ID. | - | - |

7.12.4 Output parameters

The output parameters of the **xp_sat_nominal_att_get_file** CFI function are:

Table 34: Output parameters of xp_sat_nominal_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_nominal_att _get_file | long | - | Status flag | - | - |

| | | | | | |
|------|-------------------|---|------------------------------|---|---|
| data | xp_file_model_str | - | Attitude initialization data | - | - |
|------|-------------------|---|------------------------------|---|---|

7.12.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.13 xp_sat_nominal_att_set_file

7.13.1 Overview

The **xp_sat_nominal_att_set_file** CFI function changes the initialization data for the satellite nominal attitude Id, when it was initialised with a file.

If quaternions are introduced, it is checked that they are normalized.

7.13.2 Calling interface

The calling interface of the **xp_sat_nominal_att_set_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_nom_trans_id sat_nom_trans_id;
    long status;
    xp_file_model_str data;
    status = xp_sat_nominal_att_set_file (&sat_nom_trans_id,
                                          &data);
}
```

7.13.3 Input parameters

The **xp_sat_nominal_att_set_file** CFI function has the following input parameters:

Table 35: Input parameters of xp_sat_nominal_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-----------------------|---------------|--|---------------|---------------|
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |
| data | xp_file_model_str | - | Attitude initialization data | - | - |

7.13.4 Output parameters

The output parameters of the **xp_sat_nominal_att_set_file** CFI function are:

Table 36: Output parameters of xp_sat_nominal_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------------|-----------------------|---------------|--|---------------|---------------|
| xp_sat_nominal_att_set_file | long | - | Status flag | - | - |
| sat_nom_trans_id | xp_sat_nom_trans_id * | - | Satellite nominal transformation ID (input / output parameter) | - | - |

7.13.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_nom_trans_id was not initialised.
- The sat_nom_trans_id initialization does not allow the use of this function.

7.14 xp_sat_att_angle_init

7.14.1 Overview

The **xp_sat_att_angle_init** CFI function initialises the satellite nominal attitude to satellite attitude mispointing angles for a given satellite with a user-provided set of values. The initialised values will be stored in the *sat_trans_id* output structure.

7.14.2 Calling Interface

The calling interface of the **xp_sat_att_angle_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    double ang[3];
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_MISP_ANGLE_INIT_DEF], status;

    status = xp_sat_att_angle_init(ang, &sat_trans_id, ierr);
}
```

The XP_NUM_ERR_SAT_ATT_ANGLE_INIT constant is defined in the file *explorer_pointing.h*.

7.14.3 Input Parameters

The `xp_sat_att_angle_init` CFI function has the following input parameters:

Table 37: Input parameters of `xp_sat_att_angle_init` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-----------|---------------|---|---------------|-----------------------------------|
| ang | double[3] | [0] | Pitch mispointing angle (Satellite Nominal Attitude Frame) | deg | If no better value, assume 0.0 |
| | | [1] | Roll mispointing angle (Satellite Nominal Attitude Frame) | deg | If no better value, assume 0.0 |
| | | [2] | Yaw mispointing angle (Satellite Nominal Attitude Frame) | deg | If no better value, assume 0.0 |

7.14.4 Output Parameters

The output parameters of the `xp_sat_att_angle_init` CFI function are:

Table 38: Output parameters of `xp_sat_att_angle_init`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------------------|---------------|--|---------------|---------------|
| sat_trans_id | <code>xp_sat_trans_id*</code> | - | Structure that contains the Satellite Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.14.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_att_angle_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_att_angle_init` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 39: Error messages of xp_sat_att_angle_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|--------------------------------------|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_ATT_ANGLE_INIT_MEMORY_ERR | 0 |

7.15 xp_sat_att_matrix_init

7.15.1 Overview

The **xp_sat_att_matrix_init** CFI function initializes misalignment matrix between the satellite nominal attitude frame and satellite attitude frame with a user-provided matrix. The initialized values will be stored in the *sat_trans_id* output structure. It is checked that the input matrix is orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.15.2 Calling Interface

The calling interface of the **xp_sat_att_matrix_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    double att_matrix[3][3];
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_ATT_MATRIX_INIT], status;

    status = xp_sat_att_matrix_init(att_matrix,
                                   &sat_trans_id, ierr);
}
```

The XP_NUM_ERR_SAT_ATT_MATRIX_INIT constant is defined in the file *explorer_pointing.h*.

7.15.3 Input Parameters

The `xp_sat_att_matrix_init` CFI function has the following input parameters:

Table 40: Input parameters of `xp_sat_att_matrix_init` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------|--------------|---------------|-------------------------|---------------|---------------|
| att_matrix | double[3][3] | all | Mispointing Matrix | - | - |

7.15.4 Output Parameters

The output parameters of the `xp_sat_att_matrix_init` CFI function are:

Table 41: Output parameters of `xp_sat_att_matrix_init`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------------------|---------------|--|---------------|---------------|
| sat_trans_id | <code>xp_sat_trans_id*</code> | - | Structure that contains the Satellite Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.15.5 Example

TBD

7.15.6 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_att_matrix_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_att_matrix_init` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 42: Error messages of `xp_sat_att_matrix_init` function

| Error | Error message | Cause and impact | Error code | Error |
|-------|---------------|------------------|------------|-------|
|-------|---------------|------------------|------------|-------|

| type | | | | No |
|-------------|-------------------------|---|--|-----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_ATT_MATRIX_INIT_MEMORY_ERR | 0 |
| ERR | Matrix not orthonormal | No calculation performed The CFI performs a check, with a tolerance of 10^{-6} , that the product of the input matrix and its transposed is the unitary matrix | XP_CFI_SAT_ATT_MATRIX_INIT_ORTHONORMAL_ERR | 1 |

7.16 xp_sat_att_init_harmonic

7.16.1 Overview

The **xp_sat_att_init_harmonic** CFI function initialises the satellite nominal orbital to satellite attitude mispointing angles (i.e. roll, pitch, yaw) for a given satellite with a user-provided set of values. The initialised values will be stored in the *sat_trans_id* output structure.

The mispointing angle (attitude angle in the formula) will be calculated by functions using such *sat_trans_id* (i.e. *xp_attitude_compute* or *xp_change_frame*) according to the following formula (the "angle" variable will be calculated as in *xl_position_on_orbit* (see [LIB_SUM]), using as inputs:

- the input state vector in EF passed to such functions;
- the *angle_type* passed as input to *xp_sat_att_init_harmonic*.

7.16.2 Calling Interface

The calling interface of the **xp_sat_att_init_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long angle_type, num_terms[3];
    long harmonic_type_pitch[XP_MAX_NUM_HARMONIC],
        harmonic_type_roll[XP_MAX_NUM_HARMONIC],
        harmonic_type_yaw[XP_MAX_NUM_HARMONIC];
    double harmonic_coef_pitch[XP_MAX_NUM_HARMONIC],
        harmonic_coef_roll[XP_MAX_NUM_HARMONIC],
        harmonic_coef_yaw[XP_MAX_NUM_HARMONIC];
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_ATT_INIT_HARMONIC], status;

    status = xp_sat_att_init_harmonic(&angle_type, num_terms,
                                      harmonic_type_pitch,
                                      harmonic_type_roll,
                                      harmonic_type_yaw,
                                      harmonic_coef_pitch,
                                      harmonic_coef_roll,
                                      harmonic_coef_yaw,
                                      &sat_trans_id, ierr);
}
```

}

The XP_NUM_ERR_SAT_ATT_INIT_HARMONIC and XP_MAX_NUM_HARMONIC constants are defined in the file *explorer_pointing.h*.

7.16.3 Input Parameters

The `xp_sat_att_init_harmonic` CFI function has the following input parameters:

Table 43: Input parameters of xp_sat_att_init_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------|---------------------------|---------------|--|---------------|---|
| angle_type | long * | - | Type of angle | - | XP_ANGLE_TYPE_TRUE_LAT_TOD XP_ANGLE_TYPE_TRUE_LAT_EF |
| num_terms[3] | long | [0] | Number of elements used in vectors harmonic_type_pitch and harmonic_coef_pitch | - | >=0 |
| | | [1] | Number of elements used in vectors harmonic_type_roll and harmonic_coef_roll | - | >=0 |
| | | [2] | Number of elements used in vectors harmonic_type_yaw and harmonic_coef_yaw | - | >=0 |
| harmonic_type_pitch | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | - | - |
| harmonic_type_roll | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | - | - |
| harmonic_type_yaw | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) | - | - |

| | | | | | |
|---------------------|-------------------------------|-----|---|-----|--|
| | | | >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | | |
| harmonic_coef_pitch | dou ble[XP_MA_X_NUM_HARMONIC] | all | Bias, sinus and cosinus coefficients for the pitch angle | deg | |
| harmonic_coef_roll | dou ble[XP_MA_X_NUM_HARMONIC] | all | Bias, sinus and cosinus coefficients for the roll angle | deg | |
| harmonic_coef_yaw | dou ble[XP_MA_X_NUM_HARMONIC] | all | Bias, sinus and cosinus coefficients for the yaw angle | deg | |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Angle Type: See current document, Table 3.

7.16.4 Output Parameters

The output parameters of the `xp_sat_att_init_harmonic` CFI function are:

Table 44: Output parameters of xp_sat_att_init_harmonic

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------------------|---------------|--|---------------|---------------|
| sat_trans_id | <code>xp_sat_trans_id*</code> | - | Structure that contains the Satellite Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.16.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_att_init_harmonic` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_att_init_harmonic` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM])

Table 45: Error messages of xp_sat_att_init_harmonic function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_ATT_INIT_HARMONIC_MEMORY_ERR | 0 |

7.17xp_sat_att_init_file

7.17.1 Overview

The **xp_sat_att_init_file** CFI function initialises the satellite attitude rotation for a given satellite reading values from the attitude file(s). The validity time or orbital range for the attitude angles can be specified by the user. The initialised values will be stored in the *sat_trans_id* output structure. The quaternions that could be read from the file are checked to be normalized.

The computed rotation will be given between the inertial reference frame specified in the file (tag <Reference_Frame>) and the satellite attitude frame. In case that the files contain rotation angles (pitch, roll, yaw) and if the reference frame is based on the satellite (“SATELLITE_ACTUAL”, “SATELLITE” or “SATELLITE_RELATIVE”), then the rotation will be defined between the satellite nominal attitude frame and the satellite attitude frame.

In order to read files, **xp_sat_att_init_file** function internally uses Data Handling functions. Please refer to [D_H_SUM], in particular sections 4.2 and 4.3, for further details.

7.17.2 Calling Interface

The calling interface of the **xp_sat_att_init_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_time_id time_id = {NULL};
    long n_files, time_init_mode, time_ref;
    char **attitude_file *auxiliary_file;
    double time0, time1;
    double val_time0, val_time1;
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_ATT_INIT_FILE], status;

    status = xp_sat_att_init_file(&time_id, &n_files,
                                  attitude_file, *auxiliary_file,
                                  time_init_mode, &time_ref, &time0, &time1,
                                  &val_time0, &val_time1, &sat_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_ATT_INIT_FILE** constant is defined in the file *explorer_pointing.h*.

7.17.3 Input Parameters

The `xp_sat_att_init_file` CFI function has the following input parameters:

Table 46: Input parameters of `xp_sat_att_init_file` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|-------------|---------------|--|-------------------------------------|--|
| time_id | xl_time_id* | - | Structure that contains the time correlations. | - | - |
| n_files | long * | - | Number of reference data files | - | > 0 |
| attitude_file | char ** | - | Filenames of the reference data files. In case multiple files are used, the files should be time ordered and all files should be of the same type. The supported Attitude Files are: - Generic Attitude Files - Star Tracker files., The function assumes that all the input files belong to the same Star- Tracker. As a consequence of this assumption only the Star-Tracker identifier of the first file provided in the list is read. Note that the Star-Tracker identification number should be either 1, 2 or 3 (no internal check is performed) - Attitude Ephemeris Message Files. In this case only one file is allowed and only the first segment of the file is taken for the initialisation. Those files are described in [D_H_SUM] . | - | - |
| auxiliary_file | char ** | - | Filename of an auxiliary file containing the Star-Tracker misalignment matrices | - | - |
| time_init_mode | long * | - | Flag for selecting the time range of the initialization. | - | Select either: · XP_SEL_TIME · XP_SEL_FILE |
| time_ref | long * | - | Time reference ID | - | Complete |
| time0 | double* | - | If: <code>time_init_mode=XP_SEL_TIME</code> Start of the time range defined by [time0,time1] | Decimal days (Processing format) | [-18262.0, 36524.0] |

| | | | | | |
|-------|---------|---|--|-------------------------------------|-------------------------------|
| time1 | double* | - | If: <code>time_init_mode=XP_SEL_TIME</code> End of the time range defined by [time0,time1] | Decimal days (Processing format) | [-18262.0,36524.0] > time0 |
|-------|---------|---|--|-------------------------------------|-------------------------------|

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Time Reference ID: `time_ref`. See [GEN_SUM].
- Time Init Mode ID: `time_init_mode`. See current document, Table 3.

7.17.4 Output Parameters

The output parameters of the `xp_sat_att_init_file` CFI function are:

Table 47: Output parameters of xp_sat_att_init_file

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------------------|---------------|--|----------------------------------|--------------------|
| val_time0 | double* | - | Validity start time of the initialization | Decimal days (Processing format) | [-18262.0,36524.0] |
| val_time1 | double* | - | Validity end time of the initialization | Decimal days (Processing format) | [-18262.0,36524.0] |
| sat_trans_id | <code>xp_sat_trans_id*</code> | - | Structure that contains the Satellite Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.17.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_att_init_file` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_sat_att_init_file` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 48: Error messages of xp_sat_att_init_file function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|-------------------------------------|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_MEMORY_ERR | 0 |

| | | | | |
|------|---|--|---|----|
| ERR | Error opening attitude file: %s | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ OPEN_FILES_ERR | 1 |
| ERR | Error reading input star tracker files | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ READ_FILES_ERR | 2 |
| ERR | Error reading generic attitude files | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ READ_ATT_FILES_ERR | 3 |
| ERR | No data has been read from the files | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ NO_READ_DATA_ERR | 4 |
| ERR | Error reading auxiliary file | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ READ_AUX_FILE_ERR | 5 |
| ERR | Wrong input time reference | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ WRONG_TIME_REF_ERR | 6 |
| ERR | Could not perform a time transformation | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ TIME_REF_ERR | 7 |
| ERR | Could not find word "SPH_DESCRIPTOR" in attitude file | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ READ_STR_ID_ERR | 8 |
| ERR | Quaternion is not normalized | No calculation performed | XP_CFI_SAT_ATT_INIT_FILE_ QUAT_UNITARY_ERR | 9 |
| WARN | AEM with more than 1 segment used for initialization. Only 1st segment will be used | Attitude is initialised using the 1 st segment in the AEM file. | XP_CFI_SAT_ATT_INIT_FILE_ ONLY_SEGMENT0_WARN | 10 |

7.18 xp_sat_att_quat_plus_matrix_init

7.18.1 Overview

The **xp_sat_att_quat_plus_matrix_init** CFI function initialises the satellite attitude angles using the input quaternions, and stores the rotation matrix from the satellite-based reference frame defined by the quaternions to the satellite frame, that must be provided by the user. The initialised values will be stored in the *sat_trans_id* output structure. The input quaternions are checked to be normalized, and the input matrix is checked to be orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V}' = \mathbf{M}^* \mathbf{V}$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.18.2 Calling Interface

The calling interface of the **xp_sat_att_quat_plus_matrix_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long inertial_frame;
    long num_rec;
    xd_att_rec *quaternions;
    double **matrix;
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_ATT_QUAT_PLUS_MATRIX_INIT], status;

    status = xp_sat_att_quat_plus_matrix_init( &inertial_frame,
                                              &num_rec, quaternions, matrix, sat_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_ATT_QUAT_PLUS_MATRIX_INIT** constant is defined in the file *explorer_pointing.h*.

7.18.3 Input Parameters

The `xp_sat_att_quat_plus_matrix_init` CFI function has the following input parameters:

Table 49: Input parameters of xp_sat_att_quat_plus_matrix_init function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|--------------|---------------|---|---------------|-----------------------|
| inertial_frame | long* | - | Inertial reference frame. | - | Defined in XD_Cs_enum |
| num_rec | long * | - | Number of quaternions | - | > 0 |
| quaternions | xd_att_rec * | - | Quaternions that give the rotation from the inertial reference frame to the frame based on the satellite. | - | - |
| matrix | double** | - | Rotation matrix from the frame based on the satellite to the satellite frame. | - | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Inertial frame. See [D_H_SUM].

7.18.4 Output Parameters

The output parameters of the `xp_sat_att_init_file` CFI function are:

Table 50: Output parameters of xp_sat_att_quat_plus_matrix_init

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Satellite Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.18.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_att_quat_plus_matrix_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the ***xp_sat_att_quat_plus_matrix_init*** function by calling the function of the EO_POINTING software library ***xp_get_code*** (see [GEN_SUM]).

Table 51: Error messages of xp_sat_att_quat_plus_matrix_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|------------------------------|---|--|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_ATT_QUAT_PLU_S_MATRIX_INIT_MEMORY_ERR | 0 |
| ERR | Quaternion is not normalized | No calculation performed | XP_CFI_SAT_ATT_QUAT_PLU_S_MATRIX_INIT_QUAT_UNITY_ERR | 1 |
| ERR | Matrix is not orthonormal | No calculation performed. The CFI performs a check, with a tolerance of 10^{-6} , that the product of the input matrix and its transposed is the unitary matrix. | XP_CFI_SAT_ATT_QUAT_PLU_S_MATRIX_INIT_MATRIX_ORTHONORMAL_ERR | 2 |

7.19 xp_sat_att_quat_plus_angle_init

7.19.1 Overview

The **xp_sat_att_quat_plus_angle_init** CFI function initialises the satellite attitude angles using the input quaternions, and stores the rotation matrix from the satellite-based reference frame defined by the quaternions to the satellite frame, calculated with the input angles. The initialised values will be stored in the *sat_trans_id* output structure. The input quaternions are checked to be normalized.

7.19.2 Calling Interface

The calling interface of the **xp_sat_att_quat_plus_angle_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long inertial_frame;
    long num_rec;
    xd_att_rec *quaternions;
    double angles[3];
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_ATT_QUAT_PLUS_ANGLE_INIT], status;

    status = xp_sat_att_quat_plus_angle_init( &inertial_frame,
                                              &num_rec, quaternions, angles, sat_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_ATT_QUAT_PLUS_ANGLE_INIT** constant is defined in the file *explorer_pointing.h*.

7.19.3 Input Parameters

The `xp_sat_att_quat_plus_angle_init` CFI function has the following input parameters:

Table 52: Input parameters of xp_sat_att_quat_plus_matrix_init function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|--------------|---------------|---|---------------|-----------------------|
| inertial_frame | long* | - | Inertial reference frame. | - | Defined in XD_Cs_enum |
| num_rec | long * | - | Number of quaternions | - | > 0 |
| quaternions | xd_att_rec * | - | Quaternions that give the rotation from the inertial reference frame to the frame based on the satellite. | - | - |
| angles | double[3] | - | Angles that define the rotation from the frame based on the satellite to the satellite frame. | - | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Inertial frame. See [D_H_SUM].

7.19.4 Output Parameters

The output parameters of the `xp_sat_att_quat_plus_angle_init` CFI function are:

Table 53: Output parameters of xp_sat_att_quat_plus_angle_init

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Satellite Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.19.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_sat_att_quat_plus_angle_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the ***xp_sat_att_quat_plus_angle_init*** function by calling the function of the EO_POINTING software library ***xp_get_code*** (see [GEN_SUM]).

Table 54: Error messages of xp_sat_att_quat_plus_angle_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--|--|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_SAT_ATT_QUAT_PLUS_ANGLE_INIT_MEMORY_ERR | 0 |
| ERR | Error calculating rotation matrix for euler angles | No calculation performed | XP_CFI_SAT_ATT_QUAT_PLUS_ANGLE_EULER_TO_MATRIX_ERR | 1 |
| ERR | Quaternion is not normalized | No calculation performed The CFI performs a check, with a tolerance of 10^{-6} , that the product of the input matrix and its transposed is the unitary matrix. | XP_SAT_ATT_QUAT_PLUS_ANGLE_INIT_QUAT_UNITARY_ERR | 2 |

7.20 xp_sat_att_close

7.20.1 Overview

The **xp_sat_att_close** CFI function cleans up any memory allocation performed by the satellite attitude initialization functions.

7.20.2 Calling Interface

The calling interface of the **xp_sat_att_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_sat_trans_id sat_trans_id = {NULL};
    long ierr[XP_NUM_ERR_SAT_ATT_CLOSE], status;

    status = xp_sat_att_close(&sat_trans_id, ierr);
}
```

The **XP_NUM_ERR_SAT_ATT_CLOSE** constant is defined in the file *explorer_pointing.h*.

7.20.3 Input Parameters

The **xp_sat_att_close** CFI function has the following input parameters:

Table 55: Input parameters of xp_sat_att_close function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|------------------|---------------|---|---------------|---------------|
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Sat. Trans. | - | - |

7.20.4 Output Parameters

The output parameters of the **xp_sat_att_close** CFI function are:

Table 56: Output parameters of xp_sat_att_close

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.20.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_sat_att_close** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_sat_att_close** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 57: Error messages of xp_sat_att_close function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|-----------------------------------|----------|
| ERR | Could not close the Id. as it is not initialized or it is being used | No calculation performed | XP_CFI_SAT_ATT_CLOSE_WRONG_ID_ERR | 0 |

7.21 xp_sat_att_get_angles

7.21.1 Overview

The `xp_sat_att_get_angles` CFI function returns angle data used for the satellite attitude initialization.

7.21.2 Calling interface

The calling interface of the `xp_sat_att_get_angles` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_angle_model_str data;
    status = xp_sat_att_get_angles (&sat_trans_id,
                                    &data);
}
```

7.21.3 Input parameters

The `xp_sat_att_get_angles` CFI function has the following input parameters:

Table 58: Input parameters of `xp_sat_att_get_angles` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|------------------------------|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID. | - | - |

7.21.4 Output parameters

The output parameters of the `xp_sat_att_get_angles` CFI function are:

Table 59: Output parameters of `xp_sat_att_get_angles` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------|----------------|---------------|-------------------------|---------------|---------------|
| xp_sat_att_get_angles | long | - | Status flag | - | - |
| data | xp_angle_model | - | Attitude initialization | - | - |

| | | | | | |
|--|------|--|------|--|--|
| | _str | | data | | |
|--|------|--|------|--|--|

7.21.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.22 xp_sat_att_set_angles

7.22.1 Overview

The `xp_sat_att_set_angles` CFI function changes the harmonic data used for the satellite attitude initialization.

7.22.2 Calling interface

The calling interface of the `xp_sat_att_set_angles` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_angle_model_str data;
    status = xp_sat_att_set_angles (&sat_trans_id,
                                    &data);
}
```

7.22.3 Input parameters

The `xp_sat_att_set_angles` CFI function has the following input parameters:

Table 60: Input parameters of xp_sat_att_set_angles function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|---------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |
| data | xp_angle_mod_el_str | - | Attitude initialization data | - | - |

7.22.4 Output parameters

The output parameters of the `xp_sat_att_set_angles` CFI function are:

Table 61: Output parameters of xp_sat_att_set_angles function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------|-------------------|---------------|--|---------------|---------------|
| xp_sat_att_set_angles | long | - | Status flag | - | - |
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |

7.22.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.23 xp_sat_att_get_matrix

7.23.1 Overview

The **xp_sat_att_get_matrix** CFI function returns the matrix data used for the satellite attitude initialization.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V}' = \mathbf{M} * \mathbf{V}$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.23.2 Calling interface

The calling interface of the **xp_sat_att_get_matrix** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_matrix_model_str data;
    status = xp_sat_att_get_matrix (&sat_trans_id,
                                    &data);
}
```

7.23.3 Input parameters

The **xp_sat_att_get_matrix** CFI function has the following input parameters:

Table 62: Input parameters of xp_sat_att_get_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|------------------------------|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID. | - | - |

7.23.4 Output parameters

The output parameters of the `xp_sat_att_get_matrix` CFI function are:

Table 63: Output parameters of `xp_sat_att_get_matrix` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------------------------|-----------------------------------|---------------|------------------------------|---------------|---------------|
| <code>xp_sat_att_get_matrix</code> | long | - | Status flag | - | - |
| <code>data</code> | <code>xp_matrix_mode_l_str</code> | - | Attitude initialization data | - | - |

7.23.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The `sat_trans_id` was not initialised.
- The `sat_trans_id` initialization does not allow the use of this function.

7.24 xp_sat_att_set_matrix

7.24.1 Overview

The **xp_sat_att_set_matrix** CFI function changes matrix data used for the satellite attitude initialization. It is checked that the input matrix is orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.24.2 Calling interface

The calling interface of the **xp_sat_att_set_matrix** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_matrix_model_str data;
    status = xp_sat_att_set_matrix (&sat_trans_id,
                                    &data);
}
```

7.24.3 Input parameters

The **xp_sat_att_set_matrix** CFI function has the following input parameters:

Table 64: Input parameters of xp_sat_att_set_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |

| | | | | | |
|------|---------------------|---|------------------------------|---|---|
| data | xp_angle_mod_el_str | - | Attitude initialization data | - | - |
|------|---------------------|---|------------------------------|---|---|

7.24.4 Output parameters

The output parameters of the **xp_sat_att_set_matrix** CFI function are:

Table 65: Output parameters of xp_sat_att_set_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------|-------------------|---------------|--|---------------|---------------|
| xp_sat_att_set_matrix | long | - | Status flag | - | - |
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |

7.24.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.25 xp_sat_att_get_harmonic

7.25.1 Overview

The `xp_sat_att_get_harmonic` CFI function returns harmonic data used for the satellite attitude initialization.

7.25.2 Calling interface

The calling interface of the `xp_sat_att_get_harmonic` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_harmonic_model_str data;
    status = xp_sat_att_get_harmonic (&sat_trans_id,
                                       &data);
}
```

7.25.3 Input parameters

The `xp_sat_att_get_harmonic` CFI function has the following input parameters:

Table 66: Input parameters of xp_sat_att_get_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|------------------------------|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID. | - | - |

7.25.4 Output parameters

The output parameters of the `xp_sat_att_get_harmonic` CFI function are:

Table 67: Output parameters of xp_sat_att_get_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_att_get_harmonic | long | - | Status flag | - | - |

| | | | | | |
|------|---------------------------|---|---------------------------------|---|---|
| data | xp_harmonic_m odel_str | - | Attitude initialization data | - | - |
|------|---------------------------|---|---------------------------------|---|---|

7.25.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.26 xp_sat_att_set_harmonic

7.26.1 Overview

The **xp_sat_att_set_harmonic** CFI function changes the harmonic data used for the satellite attitude initialization.

7.26.2 Calling interface

The calling interface of the **xp_sat_att_set_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_harmonic_model_str data;
    status = xp_sat_att_set_harmonic (&sat_trans_id,
                                       &data);
}
```

7.26.3 Input parameters

The **xp_sat_att_set_harmonic** CFI function has the following input parameters:

Table 68: Input parameters of xp_sat_att_set_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-----------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |
| data | xp_harmonic_model_str | - | Attitude initialization data | - | - |

7.26.4 Output parameters

The output parameters of the **xp_sat_att_set_harmonic** CFI function are:

Table 69: Output parameters of xp_sat_att_set_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|-------------------|---------------|--|---------------|---------------|
| xp_sat_att_set_harmonic | long | - | Status flag | - | - |
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |

7.26.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.27 xp_sat_att_get_file

7.27.1 Overview

The `xp_sat_att_get_file` CFI function returns satellite attitude data from the satellite attitude Id. that was initialized with a file.

7.27.2 Calling interface

The calling interface of the `xp_sat_att_get_file` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_sat_att_file_model_str data;
    status = xp_sat_att_get_file (&sat_trans_id,
                                 &data);
}
```

7.27.3 Input parameters

The `xp_sat_att_get_file` CFI function has the following input parameters:

Table 70: Input parameters of xp_sat_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|------------------------------|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID. | - | - |

7.27.4 Output parameters

The output parameters of the `xp_sat_att_get_file` CFI function are:

Table 71: Output parameters of xp_sat_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_att_get_file | long | - | Status flag | - | - |

| | | | | |
|------|------------------------------|------------------------------|---|---|
| data | xp_sat_att_file_m - odel_str | Attitude initialization data | - | - |
|------|------------------------------|------------------------------|---|---|

7.27.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.28 xp_sat_att_set_file

7.28.1 Overview

The **xp_sat_att_set_file** CFI function changes the initialization data in the satellite attitude Id. when it was initialised with a file. Quaternions are checked to be normalized.

7.28.2 Calling interface

The calling interface of the **xp_sat_att_set_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_sat_att_file_model_str data;
    status = xp_sat_att_set_file (&sat_trans_id,
                                  &data);
}
```

7.28.3 Input parameters

The **xp_sat_att_set_file** CFI function has the following input parameters:

Table 72: Input parameters of xp_sat_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|---------------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |
| data | xp_sat_att_file_model_str | - | Attitude initialization data | - | - |

7.28.4 Output parameters

The output parameters of the **xp_sat_att_set_file** CFI function are:

Table 73: Output parameters of xp_sat_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------|----------------------|---------------|--|---------------|---------------|
| xp_sat_att_set_file | long | - | Status flag | - | - |
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |

7.28.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.

7.29 xp_sat_att_get_quat_plus_angle

7.29.1 Overview

The **xp_sat_att_get_quat_plus_angle** CFI function returns satellite attitude data from the satellite attitude Id. that was initialized with quaternions and angles.

7.29.2 Calling interface

The calling interface of the **xp_sat_att_get_quat_plus_angle** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_quat_plus_angle_model_str data;
    status = xp_sat_att_get_quat_plus_angle (&sat_trans_id,
                                             &data);
}
```

7.29.3 Input parameters

The **xp_sat_att_get_quat_plus_angle** CFI function has the following input parameters:

Table 74: Input parameters of xp_sat_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|------------------------------|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID. | - | - |

7.29.4 Output parameters

The output parameters of the **xp_sat_att_get_quat_plus_angle** CFI function are:

Table 75: Output parameters of xp_sat_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_sat_att_get_quat_plus_angle | long | - | Status flag | - | - |

| | | | | | |
|------|------------------------------|---|------------------------------|---|---|
| data | xp_quat_plus_angle_model_str | - | Attitude initialization data | - | - |
|------|------------------------------|---|------------------------------|---|---|

7.29.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.
- There was an error in the calculation of the angles from the rotation matrix.

7.30 xp_sat_att_set_quat_plus_angle

7.30.1 Overview

The **xp_sat_att_set_quat_plus_angle** CFI function changes the initialization data in the satellite attitude ID, when it was initialised with quaternions and angles. The input quaternions are checked to be normalized.

7.30.2 Calling interface

The calling interface of the **xp_sat_att_set_quat_plus_angle** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_quat_plus_angle_model_str data;
    status = xp_sat_att_set_quat_plus_angle (&sat_trans_id,
                                             &data);
}
```

7.30.3 Input parameters

The **xp_sat_att_set_quat_plus_angle** CFI function has the following input parameters:

Table 76: Input parameters of xp_sat_att_set_quat_plus_angle function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-----------------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |
| data | xp_quat_plus_angle_model_st | - | Attitude initialization data | - | - |

7.30.4 Output parameters

The output parameters of the **xp_sat_att_set_quat_plus_angle** CFI function are:

Table 77: Output parameters of xp_sat_att_set_quat_plus_angle function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------------|-------------------|---------------|--|---------------|---------------|
| xp_sat_att_set_quat_plus_angle | long | - | Status flag | - | - |
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output parameter) | - | - |

7.30.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The sat_trans_id was not initialised.
- The sat_trans_id initialization does not allow the use of this function.
- There was an error in the calculation of the rotation matrix from angles.

7.31 xp_sat_att_get_quat_plus_matrix

7.31.1 Overview

The **xp_sat_att_get_quat_plus_matrix** CFI function returns satellite attitude data from the satellite attitude Id. that was initialized with quaternions and a rotation matrix.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.31.2 Calling interface

The calling interface of the **xp_sat_att_get_quat_plus_matrix** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_quat_plus_matrix_model_str data;
    status = xp_sat_att_get_quat_plus_matrix (&sat_trans_id,
                                              &data);
}
```

7.31.3 Input parameters

The **xp_sat_att_get_quat_plus_matrix** CFI function has the following input parameters:

Table 78: Input parameters of xp_sat_att_get_quat_plus_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|------------------------------|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID. | - | - |

7.31.4 Output parameters

The output parameters of the `xp_sat_att_get_quat_plus_matrix` CFI function are:

Table 79: Output parameters of xp_sat_att_get_quat_plus_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--|--|---------------|------------------------------|---------------|---------------|
| <code>xp_sat_att_get_quat_plus_matrix</code> | long | - | Status flag | - | - |
| <code>data</code> | <code>xp_quat_plus_matrix_model_str</code> | - | Attitude initialization data | - | - |

7.31.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The `sat_trans_id` was not initialised.
- The `sat_trans_id` initialization does not allow the use of this function.

7.32 xp_sat_att_set_quat_plus_matrix

7.32.1 Overview

The xp_sat_att_set_quat_plus_matrix CFI function changes the initialization data in the satellite attitude Id. when it was initialised with quaternions and a rotation matrix. The input quaternions are checked to be normalized, and the input matrix is checked to be orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.32.2 Calling interface

The calling interface of the xp_sat_att_set_quat_plus_matrix CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_sat_trans_id sat_trans_id;
    long status;
    xp_quat_plus_matrix_model_str data;
    status = xp_sat_att_set_quat_plus_matrix (&sat_trans_id,
                                              &data);
}
```

7.32.3 Input parameters

The xp_sat_att_set_quat_plus_matrix CFI function has the following input parameters:

Table 80: Input parameters of xp_sat_att_set_quat_plus_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-------------------|---------------|--|---------------|---------------|
| sat_trans_id | xp_sat_trans_id * | - | Satellite transformation ID (input / output) | - | - |

| | | | | | |
|------|-------------------------------|---|------------------------------|---|---|
| | | | parameter) | | |
| data | xp_quat_plus_matrix_model_str | - | Attitude initialization data | - | - |

7.32.4 Output parameters

The output parameters of the `xp_sat_att_set_quat_plus_matrix` CFI function are:

Table 81: Output parameters of xp_sat_att_get_quat_plus_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--|-----------------------------------|---------------|--|---------------|---------------|
| <code>xp_sat_att_set_quat_plus_matrix</code> | long | - | Status flag | - | - |
| <code>sat_trans_id</code> | <code>xp_sat_trans_id</code> * | - | Satellite transformation ID (input / output parameter) | - | - |

7.32.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The `sat_trans_id` was not initialised.
- The `sat_trans_id` initialization does not allow the use of this function.

7.33 **xp_instr_att_angle_init**

7.33.1 Overview

The **xp_instr_att_angle_init** CFI function initialises the instrument attitude mispointing angles for a given satellite and instrument with a user-provided set of values. The initialised values will be stored in the *instr_trans_id* output structure.

7.33.2 Calling Interface

The calling interface of the **xp_instr_att_angle_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    double ang[3], offset[3];
    xp_instr_trans_id instr_trans_id = {NULL};
    long ierr[XP_NUM_ERR_INSTR_ATT_ANGLE_INIT], status;

    status = xp_instr_att_angle_init(ang, offset,
                                    &instr_trans_id, ierr);
}
```

The **XP_NUM_ERR_INSTR_ATT_ANGLE_INIT** constant is defined in the file *explorer_pointing.h*.

7.33.3 Input Parameters

The `xp_instr_att_angle_init` CFI function has the following input parameters:

Table 82: Input parameters of `xp_instr_att_angle_init` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-----------|---------------|--|---------------|-----------------------------------|
| ang | double[3] | [0] | Pitch mispointing angle (Satellite Attitude Frame) | deg | If no better value, assume 0.0 |
| | | [1] | Roll mispointing angle (Satellite Attitude Frame) | deg | If no better value, assume 0.0 |
| | | [2] | Yaw mispointing angle (Satellite Attitude Frame) | deg | If no better value, assume 0.0 |
| offset | double[3] | all | Instrument Frame Origin position vector (Satellite Attitude Frame) | m | - |

7.33.4 Output Parameters

The output parameters of the `xp_instr_att_angle_init` CFI function are:

Table 83: Output parameters of `xp_instr_att_angle_init`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------------------|---------------|---|---------------|---------------|
| instr_trans_id | <code>xp_instr_trans_id*</code> | - | Structure that contains the Instrument Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.33.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_instr_att_angle_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_instr_att_angle_init** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM])

Table 84: Error messages of xp_instr_att_angle_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|--|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_INSTR_ATT_ANGLE_INIT_MEMORY_ERR | 0 |

7.34 xp_instr_att_matrix_init

7.34.1 Overview

The **xp_instr_att_matrix_init** CFI function initialises the instrument attitude mispointing angles for a given satellite and instrument with a user-provided matrix. The initialised values will be stored in the *instr_trans_id* output structure. Input matrix is checked to be orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.34.2 Calling Interface

The calling interface of the **xp_instr_att_matrix_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    double att_matrix[3][3], offset[3];
    xp_instr_trans_id instr_trans_id = {NULL};
    long ierr[XP_NUM_ERR_INSTR_ATT_MATRIX_INIT], status;

    status = xp_instr_att_matrix_init(att_matrix, offset,
                                    &instr_trans_id, ierr);
}
```

The `XP_NUM_ERR_INSTR_ATT_MATRIX_INIT` constant is defined in the file *explorer_pointing.h*.

7.34.3 Input Parameters

The `xp_instr_att_matrix_init` CFI function has the following input parameters:

Table 85: Input parameters of `xp_instr_att_matrix_init` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------|--------------|---------------|--|---------------|---------------|
| att_matrix | double[3][3] | all | Mispointing Matrix | - | - |
| offset | double[3] | all | Instrument Frame Origin position vector (Satellite Attitude Frame) | m | - |

7.34.4 Output Parameters

The output parameters of the `xp_instr_att_matrix_init` CFI function are:

Table 86: Output parameters of `xp_instr_att_matrix_init`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------------------|---------------|---|---------------|---------------|
| instr_trans_id | <code>xp_instr_trans_id*</code> | - | Structure that contains the Instrument Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.34.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_instr_att_matrix_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_instr_att_matrix_init` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 87: Error messages of `xp_instr_att_matrix_init` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|-------------------------|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_INSTR_ATT_MATRIX | 0 |

| | | | _INIT_MEMORY_ERR | |
|-----|---------------------------|---|---|---|
| ERR | Matrix is not orthonormal | No calculation performed. The CFI performs a check, with a tolerance of 10^{-6} , that the product of the input matrix and its transposed is the unitary matrix. | XP_CFI_INSTR_ATT_MATRIX_INIT_MATRIX_ORTHONORMAL_ERR | 1 |

7.35 xp_instr_att_init_harmonic

7.35.1 Overview

The **xp_instr_att_init_harmonic** CFI function initialises the instrument attitude mispointing angles (i.e. roll, pitch, yaw) for a given satellite and instrument with a user-provided set of values. The initialised values will be stored in the *instr_trans_id* output structure.

The mispointing angle (attitude angle in the formula) will be calculated by functions using such *instr_trans_id* (i.e. **xp_attitude_compute** or **xp_change_frame**) according to the following formula (the "angle" variable will be calculated as in **xl_position_on_orbit** (see [LIB_SUM]), using as inputs:

- the input state vector in EF passed to such functions;
- the angle_type passed as input to **xp_instr_att_init_harmonic**.

7.35.2 Calling Interface

The calling interface of the **xp_instr_att_init_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long angle_type, num_terms[3];
    long harmonic_type_pitch[XP_MAX_NUM_HARMONIC],
        harmonic_type_roll[XP_MAX_NUM_HARMONIC],
        harmonic_type_yaw[XP_MAX_NUM_HARMONIC];
    double harmonic_coef_pitch[XP_MAX_NUM_HARMONIC],
        harmonic_coef_roll[XP_MAX_NUM_HARMONIC],
        harmonic_coef_yaw[XP_MAX_NUM_HARMONIC];
    double offset[3];
    xp_instr_trans_id instr_trans_id = {NULL};
    long ierr[XP_NUM_ERR_INSTR_ATT_INIT_HARMONIC], status;

    status = xp_instr_att_init_harmonic(&angle_type, num_terms,
                                         harmonic_type_pitch,
                                         harmonic_type_roll,
                                         harmonic_type_yaw,
                                         harmonic_coef_pitch,
                                         harmonic_coef_roll,
                                         harmonic_coef_yaw,
```

```
    offset,  
    &instr_trans_id, ierr);  
}
```

The XP_NUM_ERR_INSTR_ATT_INIT_HARMONIC and XP_MAX_NUM_HARMONIC constants are defined in the file *explorer_pointing.h*.

7.35.3 Input Parameters

The `xp_instr_att_init_harmonic` CFI function has the following input parameters:

Table 88: Input parameters of xp_instr_att_init_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------|---------------------------|---------------|--|---------------|---|
| angle_type | long * | - | Type of angle | - | XP_ANGLE_TYPE_TRUE_LAT_TOD XP_ANGLE_TYPE_TRUE_LAT_EF |
| num_terms[3] | long | [0] | Number of elements used in vectors harmonic_type_pitch and harmonic_coef_pitch | - | >=0 |
| | | [1] | Number of elements used in vectors harmonic_type_roll and harmonic_coef_roll | - | >=0 |
| | | [2] | Number of elements used in vectors harmonic_type_yaw and harmonic_coef_yaw | - | >=0 |
| harmonic_type_pitch | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | - | - |
| harmonic_type_roll | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | - | - |
| harmonic_type_yaw | long[XP_MAX_NUM_HARMONIC] | all | Type of coefficients: =0 for the bias parameter <0 for the sinus coefficients (-n means that corresponds to the sinus coefficient of order n) | - | - |

| | | | | | |
|---------------------|------------------------------|-----|---|-----|---|
| | | | >0 for the cosinus coefficients (+n means that corresponds to the cosinus coefficient of order n) | | |
| harmonic_coef_pitch | double[XP_MA_X_NUM_HARMONIC] | all | Bias, sinus and cosinus coefficients for the pitch angle | deg | |
| harmonic_coef_roll | double[XP_MA_X_NUM_HARMONIC] | all | Bias, sinus and cosinus coefficients for the roll angle | deg | |
| harmonic_coef_yaw | double[XP_MA_X_NUM_HARMONIC] | all | Bias, sinus and cosinus coefficients for the yaw angle | deg | |
| offset | double[3] | all | Instrument Frame Origin position vector (Satellite Attitude Frame) | m | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Angle Type: See current document, Table 3.

7.35.40 *utput Parameters*

The output parameters of the `xp_instr_att_init_harmonic` CFI function are:

Table 89: Output parameters of xp_instr_att_init_harmonic

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------------------|---------------|---|---------------|---------------|
| instr_trans_id | <code>xp_instr_trans_id*</code> | - | Structure that contains the Instrument Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.35.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_instr_att_init_harmonic` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_instr_att_init_harmonic` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 90: Error messages of xp_instr_att_init_harmonic function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_INSTR_ATT_INIT_HARMONIC_MEMORY_ERR | 0 |

7.36 xp_instr_att_init_file

7.36.1 Overview

The **xp_instr_att_init_file** CFI function initialises the instrument attitude rotation for a given satellite reading values from the attitude file(s). The validity time or orbital range for the attitude angles can be specified by the user. The initialised values will be kept in memory and used by other CFI functions.

The computed rotation will be given between the inertial reference frame specified in the file (tag <Reference_Frame>) and the instrument frame. In case that the files contain rotation angles (pitch, roll, yaw) and if the reference frame is based on the satellite (“SATELLITE_ACTUAL”, “SATELLITE” or “SATELLITE_RELATIVE”), then the rotation will be defined between the satellite attitude frame and the instrument frame.

In order to read files, **xp_instr_att_init_file** function internally uses Data Handling functions. Please refer to [D_H_SUM], in particular sections 4.2 and 4.3, for further details.

7.36.2 Calling Interface

The calling interface of the **xp_instr_att_init_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_time_id time_id = {NULL};
    long n_files, time_init_mode, time_ref;
    char **instrument_file;
    double time0, time1;
    double val_time0, val_time1;
    xp_instr_trans_id instr_trans_id = {NULL};
    long ierr[XP_NUM_ERR_INSTR_ATT_INIT_FILE], status;

    status = xp_instr_att_init_file(&time_id,
                                    &n_files, instrument_file,
                                    &time_init_mode, &time_ref, &time0, &time1,
                                    &val_time0, &val_time1, &instr_trans_id, ierr);
}
```

The **XP_NUM_ERR_INSTR_ATT_INIT_FILE** constant is defined in the file *explorer_pointing.h*.

7.36.3 Input Parameters

The `xp_instr_att_init_file` CFI function has the following input parameters:

Table 91: Input parameters of `xp_instr_att_init_file` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|-------------|---------------|---|----------------------------------|--|
| time_id | xl_time_id* | - | Structure that contains the time correlations. | - | - |
| n_files | long * | - | Number of reference data files | - | > 0 |
| instrument_file | char ** | - | Filenames of the reference data files. In case multiple files are used, the files should be time ordered and all files should be of the same type. The supported Attitude File formats are: - Generic Attitude files. - Attitude Ephemeris Message Files. In this case only one file is allowed and only the first segment of the file is taken for the initialisation. Those files are described in [D_H_SUM]. | - | - |
| time_init_mode | long * | - | Flag for selecting the time range of the initialization. | - | Select either: · XP_SEL_TIME · XP_SEL_FILE |
| time_ref | long * | - | Time reference ID | - | Complete |
| time0 | double* | - | If: <code>time_init_mode=XP_SEL_TIME</code> Start of the time range defined by [time0,time1] | Decimal days (Processing format) | [-18262.0,36524.0] |
| time1 | double* | - | If: <code>time_init_mode=XP_SEL_TIME</code> End of the time range defined by [time0,time1] | Decimal days (Processing format) | [-18262.0,36524.0] > time0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Time Reference ID: `time_ref`. See [GEN_SUM].
- Time Init Mode ID: `time_init_mode`. See current document, Table 3.

7.36.4 Output Parameters

The output parameters of the `xp_instr_att_init_file` CFI function are:

Table 92: Output parameters of xp_instr_att_init_file

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|--------------------|---------------|---|----------------------------------|--------------------|
| val_time0 | double* | - | Validity start time of the initialization | Decimal days (Processing format) | [-18262.0,36524.0] |
| val_time1 | double* | - | Validity end time of the initialization | Decimal days (Processing format) | [-18262.0,36524.0] |
| instr_trans_id | xp_instr_trans_id* | - | Structure that contains the Instrument Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.36.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_instr_att_init_file` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_instr_att_init_file` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 93: Error messages of xp_instr_att_init_file function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|---|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_INSTR_ATT_INIT_FILE_MEMORY_ERR | 0 |
| ERR | Wrong input time reference | No calculation performed | XP_CFI_INSTR_ATT_INIT_FILE_WRONG_TIME_REF_ERR | 1 |
| ERR | Error opening attitude file: %s | No calculation performed | XP_CFI_INSTR_ATT_INIT_ | 2 |

| | | | FILE_OPEN_FILES_ERR | |
|------|---|--|---|---|
| ERR | Error reading generic attitude files | No calculation performed | XP_CFI_INSTR_ATT_INIT_FILE_READ_ATT_FILES_E RR | 3 |
| ERR | Could not perform a time transformation | No calculation performed | XP_CFI_INSTR_ATT_INIT_FILE_TIME_CONV_ERR | 4 |
| ERR | Unsupported attitude file format detected | No calculation performed | XP_CFI_INSTR_ATT_INIT_FILE_WRONG_FILE_FORMAT_E RR | 5 |
| WARN | AEM with more than 1 segment used for initialization. Only 1st segment will be used | Attitude is initialised using the 1 st segment in the AEM file. | XP_CFI_INSTR_ATT_INIT_FILE_ONLY_SEGMENT0_WARN, | 6 |

7.37 xp_instr_att_close

7.37.1 Overview

The **xp_instr_att_close** CFI function cleans up any memory allocation performed by the instrument attitude initialization functions.

7.37.2 Calling Interface

The calling interface of the **xp_instr_att_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_instr_trans_id instr_trans_id = {NULL};
    long ierr[XP_NUM_ERR_INSTR_ATT_CLOSE], status;

    status = xp_instr_att_close(&instr_trans_id, ierr);
}
```

The **XP_NUM_ERR_INSTR_ATT_CLOSE** constant is defined in the file *explorer_pointing.h*.

7.37.3 Input Parameters

The **xp_instr_att_close** CFI function has the following input parameters:

Table 94: Input parameters of xp_instr_att_close function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|--------------------|---------------|---|---------------|---------------|
| instr_trans_id | xp_instr_trans_id* | - | Structure that contains the Instr. Trans. | - | - |

7.37.4 Output Parameters

The output parameters of the **xp_instr_att_close** CFI function are:

Table 95: Output parameters of xp_instr_att_close

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.37.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_instr_att_close** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_instr_att_close** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 96: Error messages of xp_instr_att_close function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|-------------------------------------|----------|
| ERR | Could not close the Id. as it is not initialized or it is being used | No calculation performed | XP_CFI_INSTR_ATT_CLOSE_WRONG_ID_ERR | 0 |

7.38 xp_instr_att_get_angles

7.38.1 Overview

The `xp_instr_att_get_angles` CFI function returns the angle data used for the instrument attitude initialization.

7.38.2 Calling interface

The calling interface of the `xp_instr_att_get_angles` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_angle_model_str data;
    status = xp_instr_att_get_angles (&instr_trans_id,
                                      &data);
}
```

7.38.3 Input parameters

The `xp_instr_att_get_angles` CFI function has the following input parameters:

Table 97: Input parameters of `xp_instr_att_get_angles` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|-------------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID. | - | - |

7.38.4 Output parameters

The output parameters of the `xp_instr_att_get_angles` CFI function are:

Table 98: Output parameters of `xp_instr_att_get_angles` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_instr_att_get_angles | long | - | Status flag | - | - |

| | | | | | |
|------|------------------------|---|---------------------------------|---|---|
| data | xp_angle_model _str | - | Attitude initialization data | - | - |
|------|------------------------|---|---------------------------------|---|---|

7.38.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.39xp_instr_att_set_angles

7.39.1 Overview

The **xp_instr_att_set_angles** CFI function changes the harmonic data used for the satellite attitude initialization.

7.39.2 Calling interface

The calling interface of the **xp_instr_att_set_angles** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_angle_model_str data;
    status = xp_instr_att_set_angles (&instr_trans_id,
                                      &data);
}
```

7.39.3 Input parameters

The **xp_instr_att_set_angles** CFI function has the following input parameters:

Table 99: Input parameters of xp_instr_att_set_angles function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|---|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |
| data | xp_angle_model_str | - | Attitude initialization data | - | - |

7.39.4 Output parameters

The output parameters of the **xp_instr_att_set_angles** CFI function are:

Table 100: Output parameters of xp_instr_att_set_angles function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|---------------------|---------------|---|---------------|---------------|
| xp_instr_att_set_angles | long | - | Status flag | - | - |
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |

7.39.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.40 xp_instr_att_get_matrix

7.40.1 Overview

The `xp_instr_att_get_matrix` CFI function returns the matrix data used for the satellite attitude initialization.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.40.2 Calling interface

The calling interface of the `xp_instr_att_get_matrix` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_matrix_model_str data;
    status = xp_instr_att_get_matrix (&instr_trans_id,
                                      &data);
}
```

7.40.3 Input parameters

The `xp_instr_att_get_matrix` CFI function has the following input parameters:

Table 101: Input parameters of `xp_instr_att_get_matrix` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|-------------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID. | - | - |

7.40.4 Output parameters

The output parameters of the `xp_instr_att_get_matrix` CFI function are:

Table 102: Output parameters of `xp_instr_att_get_matrix` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------------------|-----------------------------------|---------------|------------------------------|---------------|---------------|
| <code>xp_instr_att_get_matrix</code> | long | - | Status flag | - | - |
| <code>data</code> | <code>xp_matrix_mode_l_str</code> | - | Attitude initialization data | - | - |

7.40.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The `instr_trans_id` was not initialised.
- The `instr_trans_id` initialization does not allow the use of this function.

7.41 xp_instr_att_set_matrix

7.41.1 Overview

The **xp_instr_att_set_matrix** CFI function changes matrix data used for the satellite attitude initialization. The matrix is checked to be orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.41.2 Calling interface

The calling interface of the **xp_instr_att_set_matrix** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_matrix_model_str data;
    status = xp_instr_att_set_matrix (&instr_trans_id,
                                      &data);
}
```

7.41.3 Input parameters

The **xp_instr_att_set_matrix** CFI function has the following input parameters:

Table 103: Input parameters of xp_instr_att_set_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|---|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |

| | | | | | |
|------|---------------------|---|------------------------------|---|---|
| data | xp_angle_mod_el_str | - | Attitude initialization data | - | - |
|------|---------------------|---|------------------------------|---|---|

7.41.4 Output parameters

The output parameters of the `xp_instr_att_set_matrix` CFI function are:

Table 104: Output parameters of xp_instr_att_set_matrix function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|---------------------|---------------|---|---------------|---------------|
| xp_instr_att_set_matrix | long | - | Status flag | - | - |
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |

7.41.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.42 xp_instr_att_get_harmonic

7.42.1 Overview

The **xp_instr_att_get_harmonic** CFI function returns harmonic data used for the satellite attitude initialization.

7.42.2 Calling interface

The calling interface of the **xp_instr_att_get_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_harmonic_model_str data;
    status = xp_instr_att_get_harmonic (&instr_trans_id,
                                         &data);
}
```

7.42.3 Input parameters

The **xp_instr_att_get_harmonic** CFI function has the following input parameters:

Table 105: Input parameters of xp_instr_att_get_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|-------------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID. | - | - |

7.42.4 Output parameters

The output parameters of the **xp_instr_att_get_harmonic** CFI function are:

Table 106: Output parameters of xp_instr_att_get_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_instr_att_get_harmonic | long | - | Status flag | - | - |

| | | | | | |
|------|---------------------------|---|---------------------------------|---|---|
| data | xp_harmonic_m odel_str | - | Attitude initialization data | - | - |
|------|---------------------------|---|---------------------------------|---|---|

7.42.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.43 xp_instr_att_set_harmonic

7.43.1 Overview

The **xp_instr_att_set_harmonic** CFI function changes the harmonic data used for the satellite attitude initialization.

7.43.2 Calling interface

The calling interface of the **xp_instr_att_set_harmonic** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_harmonic_model_str data;
    status = xp_instr_att_set_harmonic (&instr_trans_id,
                                         &data);
}
```

7.43.3 Input parameters

The **xp_instr_att_set_harmonic** CFI function has the following input parameters:

Table 107: Input parameters of xp_instr_att_set_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|-----------------------|---------------|---|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |
| data | xp_harmonic_model_str | - | Attitude initialization data | - | - |

7.43.4 Output parameters

The output parameters of the **xp_instr_att_set_harmonic** CFI function are:

Table 108: Output parameters of xp_instr_att_set_harmonic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------------|---------------------|---------------|---|---------------|---------------|
| xp_instr_att_set_harmonic | long | - | Status flag | - | - |
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |

7.43.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.44 xp_instr_att_get_file

7.44.1 Overview

The `xp_instr_att_get_file` CFI function returns satellite attitude data from the satellite attitude Id. that was initialized with a file.

7.44.2 Calling interface

The calling interface of the `xp_instr_att_get_file` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_instr_att_file_model_str data;
    status = xp_instr_att_get_file (&instr_trans_id,
                                    &data);
}
```

7.44.3 Input parameters

The `xp_instr_att_get_file` CFI function has the following input parameters:

Table 109: Input parameters of xp_instr_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|-------------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID. | - | - |

7.44.4 Output parameters

The output parameters of the `xp_instr_att_get_file` CFI function are:

Table 110: Output parameters of xp_instr_att_get_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_instr_att_get_file | long | - | Status flag | - | - |

| | | | | | |
|------|---------------------------------|---|---------------------------------|---|---|
| data | xp_instr_att_file_ model_str | - | Attitude initialization data | - | - |
|------|---------------------------------|---|---------------------------------|---|---|

7.44.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.45 xp_instr_att_set_file

7.45.1 Overview

The xp_instr_att_set_file CFI function changes the initialization data in the satellite attitude Id. when it was initialised with a file. Quaternions are checked to be normalized.

7.45.2 Calling interface

The calling interface of the xp_instr_att_set_file CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_instr_trans_id instr_trans_id;
    long status;
    xp_instr_att_file_model_str data;
    status = xp_instr_att_set_file (&instr_trans_id,
                                    &data);
}
```

7.45.3 Input parameters

The xp_instr_att_set_file CFI function has the following input parameters:

Table 111: Input parameters of xp_instr_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|-----------------------------|---------------|---|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |
| data | xp_instr_att_file_model_str | - | Attitude initialization data | - | - |

7.45.4 Output parameters

The output parameters of the xp_instr_att_set_file CFI function are:

Table 112: Output parameters of xp_instr_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------|---------------------|---------------|---|---------------|---------------|
| xp_instr_att_set_file | long | - | Status flag | - | - |
| instr_trans_id | xp_instr_trans_id * | - | Instrument transformation ID (input / output parameter) | - | - |

7.45.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The instr_trans_id was not initialised.
- The instr_trans_id initialization does not allow the use of this function.

7.46 xp_instr_att_get_offset

7.46.1 Overview

The **xp_instr_att_get_offset** CFI function allows the user to retrieve the offsets associated with an **xp_instr_trans_id**.

7.46.2 Calling interfaces

The calling interface of the **xp_instr_att_get_offset** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_instr_trans_id *instr_trans_id;
    double offset[3];
    long status;

    status = xp_instr_att_get_offset(instr_trans_id, offset);
}
```

7.46.3 Input Parameters

The **xp_instr_att_get_offset** CFI function has the following input parameters:

Table 113: Input parameters of xp_instr_att_get_offset function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|-------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument trans id | - | - |

7.46.4 Output Parameters

The output parameters of the **xp_instr_att_get_offset** CFI function are:

Table 114: Output parameters of xp_instr_att_get_offset

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-----------|---------------|--|---------------|---------------|
| offset | double[3] | - | Offsets associated with instr_trans_id | - | - |

7.46.5 Warnings and Errors

The **xp_instr_att_get_offset** CFI function has no warnings and errors defined.

7.47 xp_instr_att_set_offset

7.47.1 Overview

The `xp_instr_att_set_offset` CFI function allows the user to set the offsets associated with an `xp_instr_trans_id`.

7.47.2 Calling interfaces

The calling interface of the `xp_instr_att_set_offset` CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_instr_trans_id *instr_trans_id;
    double offset[3];
    long status;

    status = xp_instr_att_set_offset(instr_trans_id, offset);
}
```

7.47.3 Input Parameters

The `xp_instr_att_set_offset` CFI function has the following input parameters:

Table 115: Input parameters of `xp_instr_att_set_offset` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|--------------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument trans id | - | - |
| offset | double[3] | - | New offsets for instr_trans_id | - | - |

7.47.4 Output Parameters

The output parameters of the `xp_instr_att_set_offset` CFI function are:

Table 116: Output parameters of `xp_instr_att_set_offset`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------|---------------------|---------------|-------------------------|---------------|---------------|
| instr_trans_id | xp_instr_trans_id * | - | Instrument trans id | - | - |

7.47.5 Warnings and Errors

The **xp_instr_att_set_offset** CFI function has no warnings and errors defined.

7.48 xp_set_az_el_definition

7.48.1 Overview

The **xp_set_az_el_definition** function sets an user-defined azimuth/elevation in a satellite nominal attitude id, satellite attitude id or instrument attitude id.

7.48.2 Calling interface

The calling interface of the **xp_set_az_el_definition** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    void *att_frame_id;
    xl_az_el_definition azel_def;
    long ierr[XP_NUM_ERR_SET_AZ_EL_DEFINITION];
    status = xp_set_az_el_definition (att_frame_id,
                                    &azel_def,
                                    ierr);
}
```

7.48.3 Input parameters

The **xp_set_az_el_definition** CFI function has the following input parameters:

Table 117: Input parameters of xp_instr_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|--------|---------------|---|---------------|--|
| att_frame_id | void* | - | Attitude where the definition will be inserted. | - | It must be a Satellite Nominal id (xp_sat_nom_trans_id*), satellite attitude id (xp_sat_trans_id*) or instrument attitude id (xp_instr_trans_id*). |

| | | | | | |
|----------|---------------------|---|------------------------------|---|---|
| azel_def | xl_az_el_definition | - | Azimuth/elevation definition | - | - |
|----------|---------------------|---|------------------------------|---|---|

7.48.4 Output parameters

The output parameters of the **xp_set_az_el_definition** CFI function are:

Table 118: Output parameters of xp_instr_att_set_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.48.5 Warnings and errors

This function returns error if the input id is not initialized, it is not of the correct type, or there is a problem with the azimuth/elevation definition introduced by the user. In Table 119 are summarized the possible errors.

Table 119: Error messages of xp_set_az_el_definition function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|--|----------|
| ERR | Argument ID is not initialized. | No calculation performed | XP_CFI_SET_AZ_EL_DEF_ID_NOT_INITIALIZE_ERR | 0 |
| ERR | Argument ID is not a satellite nominal, satellite or instrument attitude ID. | No calculation performed | XP_CFI_SET_AZ_EL_DEF_NOT_ATTITUDE_ID_ERR | 1 |
| ERR | Azimuth axis are not perpendicular. | No calculation performed | XP_CFI_SET_AZ_EL_DEF_NOT_PERPENDICULAR_AXIS_AZIMUTH_AXIS_ERR | 2 |
| ERR | Elevation axis not perpendicular to azimuth plane. | No calculation performed | XP_CFI_SET_AZ_EL_DEF_NOT_PERPENDICULAR_ELEVATION_AXIS_ERR | 3 |

7.49 xp_attitude_define

7.49.1 Overview

The **xp_attitude_define** CFI function initializes the satellite nominal attitude, satellite attitude and instrument attitude according to the input data.

The input data is stored in a structure of type **xd_attitude_definition_data** (see section 6.3 of [D_H_SUM]). The user can fill this structure within his application program or by reading an attitude definition file using function **xd_read_att_def** (see [D_H_SUM]).

7.49.2 Calling Interface

The calling interface of the **xp_attitude_define** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xd_attitude_definition_data data;
    xp_sat_nom_trans_id sat_nom_trans_id;
    xp_sat_trans_id sat_trans_id;
    xp_instr_trans_id instr_trans_id;
    long ierr[XP_NUM_ERR_ATTITUDE_DEFINE], status;

    status = xp_attitude_define(&data,
                                &sat_nom_trans_id,
                                &sat_trans_id,
                                &instr_trans_id, ierr);
}
```

The **XP_NUM_ERR_ATTITUDE_DEFINE** constant is defined in the file *explorer_pointing.h*.

7.49.3 Input Parameters

The **xp_attitude_define** CFI function has the following input parameters:

Table 120: Input parameters of xp_attitude_define function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-----------------------------|---------------|-------------------------------|---------------|---------------|
| Data | xd_attitude_definition_data | - | Attitude file definition data | - | - |

7.49.4 Output Parameters

The output parameters of the **xp_attitude_define** CFI function are:

Table 121: Output parameters of xp_attitude_define

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|----------------------|---------------|--|---------------|---------------|
| sat_nom_trans_id | xp_sat_nom_trans_id* | - | Structure that contains the Satellite nominal Transformation | - | - |
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Satellite Transformation | - | - |
| instr_trans_id | xp_instr_trans_id* | - | Structure that contains the Instrument Transformation | - | - |
| ierr | long | - | Error vector | - | - |

7.49.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_attitude_define** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_attitude_define** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 122: Error messages of xp_attitude_define function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---------------------------------------|----------|
| ERR | Error initializing satellite nominal attitude | No computation performed | XP_ATTITUDE_DEFINE_SAT_NOM_TRANS_INIT | 0 |
| ERR | Error initializing satellite attitude | No computation performed | XP_ATTITUDE_DEFINE_SAT_TRANS_INIT | 1 |
| ERR | Error initializing instrument attitude | No computation performed | XP_ATTITUDE_DEFINE_INST_R_TRANS_INIT | 2 |

7.50 xp_run_init

7.50.1 Overview

The **xp_run_init** CFI function adds to the *run id* the *sat_nom_trans_id*, *sat_trans_id*, *instr_trans_id*, *atmos_id* and *dem Id*.

7.50.2 Calling interface

The calling interface of the **xp_run_init** CFI function is the following:

```
#include <explorer_pointing.h>
{
    long run_id;
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    xp_sat_trans_id     sat_trans_id = {NULL};
    xp_instr_trans_id   instr_trans_id = {NULL};
    xp_atmos_id         atmos_id = {NULL};
    xp_dem_id           dem_id = {NULL};
    long ierr[XP_NUM_ERR_RUN_INIT], status;
    status = xp_run_init (&run_id, &sat_nom_trans_id,
                          &sat_trans_id, &instr_trans_id,
                          &atmos_id, &dem_id,
                          ierr);
}
```

7.50.3 Input parameters

The **xp_run_init** CFI function has the following input parameters:

Table 123: Input parameters of xp_run_init function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|----------------------|---------------|--|---------------|---------------|
| run_id | long * | - | Run ID | - | >=0 |
| sat_nom_trans_id | xp_sat_nom_trans_id* | - | Structure that contains the Sat. Nom. Trans. | - | - |
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Sat. Trans. | - | - |
| instr_trans_id | xp_instr_trans_id* | - | Structure that contains the Instr. Trans. | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | - |
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |

7.50.4 Output parameters

The output parameters of the **xp_run_init** CFI function are:

Table 124: Output parameters of xp_run_init function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|--------|---------------|-------------------------|---------------|---------------|
| xp_run_init | long | - | Status flag | - | - |
| run_id | long * | - | Run ID | - | >=0 |
| ierr | long | - | Error vector | - | - |

7.50.5 Warnings and errors

Next table lists the possible error messages that can be returned by the **xp_run_init** CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the **xp_run_init** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 125: Error messages of xl_run_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|-----------------------------------|----------|
| ERR | Wrong input run_id. It is not correctly initialized | No calculation performed | XP_CFI_RUN_INIT_STATUS_ERR | 0 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_RUN_INIT_MEMORY_ERR | 1 |
| ERR | Incompatible input Ids | No calculation performed | XP_CFI_RUN_INIT_INCONSISTENCY_ERR | 2 |

7.51 xp_run_get_ids

7.51.1 Overview

The **xp_run_get_ids** CFI function returns the *ids* being used..

7.51.2 Calling interface

The calling interface of the **xp_run_get_ids** CFI function is the following:

```
#include <explorer_pointing.h>
{
    long run_id;
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    xp_sat_trans_id     sat_trans_id = {NULL};
    xp_instr_trans_id   instr_trans_id = {NULL};
    xp_atmos_id         atmos_id = {NULL};
    xp_dem_id           dem_id = {NULL};
    xp_run_get_ids     (&run_id,
                        &sat_nom_trans_id,
                        &sat_trans_id,
                        &instr_trans_id,
                        &atmos_id,
                        &dem_id);
}
```

7.51.3 Input parameters

The `xp_run_get_ids` CFI function has the following input parameters:

Table 126: Input parameters of xp_run_get_ids function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| run_id | long * | - | Run ID | - | >=0 |

7.51.4 Output parameters

The output parameters of the `xp_run_get_ids` CFI function are:

Table 127: Output parameters of xp_run_get_ids function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|----------------------|---------------|--|---------------|---------------|
| xl_run_get_ids | void | - | - | - | - |
| sat_nom_trans_id | xp_sat_nom_trans_id* | - | Structure that contains the Sat. Nom. Trans. | - | - |
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Sat. Trans. | - | - |
| instr_trans_id | xp_instr_trans_id* | - | Structure that contains the Instr. Trans. | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | - |
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |

7.51.5 Warnings and errors

TBW

7.52 xp_run_close

7.52.1 Overview

The **xp_run_close** CFI function cleans up any memory allocation performed by the initialization functions.

7.52.2 Calling interface

The calling interface of the **xp_run_close** CFI function is the following:

```
#include <explorer_pointing.h>
{
    long run_id;
    xp_run_close (&run_id);
}
```

7.52.3 Input parameters

The **xp_run_close** CFI function has the following input parameters:

Table 128: Input parameters of xp_run_close function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| run_id | long * | - | Run ID | - | >=0 |

7.52.4 Output parameters

The output parameters of the **xp_run_close** CFI function are:

Table 129: Output parameters of xp_run_close function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|--------|---------------|-------------------------|---------------|---------------|
| xp_run_close | void | - | - | - | - |

7.52.5 Warnings and errors

This function does not return errors nor warnings.

7.53 xp_attitude_init

7.53.1 Overview

The **xp_attitude_init** CFI function creates an empty *attitude Id*.

7.53.2 Calling Interface

The calling interface of the **xp_attitude_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_attitude_id attitude_id = {NULL};
    long ierr[XP_NUM_ERR_ATTITUDE_INIT], status;

    status = xp_attitude_init(&attitude_id, ierr);
}
```

The **XP_NUM_ERR_ATTITUDE_INIT** constant is defined in the file *explorer_pointing.h*.

7.53.3 Input Parameters

The **xp_attitude_init** CFI function has no input parameters.

7.53.4 Output Parameters

The output parameters of the **xp_attitude_init** CFI function are:

Table 130: Output parameters of xp_attitude_init

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|---------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. | - | - |
| ierr | long | - | Error vector | - | - |

7.53.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_attitude_init** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_attitude_init** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 131: Error messages of xp_attitude_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------|--------------------------|---------------------------------|----------|
| ERR | Memory allocation error | No calculation performed | XP_CFI_ATTITUDE_INIT_MEMORY_ERR | 0 |

7.54 xp_attitude_compute

7.54.1 Overview

The **xp_attitude_compute** CFI function calculates the Attitude Frame for a given S/C state vector.

Note: a correction can be applied in order to compensate the travel time of Sun light travel time. This correction is not applied with default model. To activate this correction, the Sun model in xl_model_id must be initialized with the enum XL_MODEL_SUN_TRAVEL_TIME using the function xl_model_init (see [LIB_SUM]).

7.54.2 Calling interface

The calling interface of the **xp_attitude_compute** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_model_id          model_id = {NULL};
    xl_time_id           time_id  = {NULL};
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    xp_sat_trans_id      sat_trans_id = {NULL};
    xp_instr_trans_id   instr_trans_id = {NULL};
    xp_attitude_id       attitude_id = {NULL};
    long time_ref, target_frame;
    double time, pos[3], vel[3], acc[3];
    long ierr[XP_NUM_ERR_ATTITUDE_COMPUTE];

    status =xp_attitude_compute(&model_id, &time_id,
                                &sat_nom_trans_id,
                                &sat_trans_id,
                                &instr_trans_id,
                                &attitude_id,
                                /* input/output */
                                &time_ref, &time, &pos, &vel, &acc,
                                &target_frame,
                                ierr);
}

/* Or, using the run_id */
long run_id;
```

```

status = xp_attitude_compute_run(&run_id,
                                  &attitude_id,
                                  /* input/output */
                                  &time_ref, &time, pos, vel, acc,
                                  &target_frame,
                                  ierr);
}

```

The `XP_NUM_ERR_ATTITUDE_COMPUTE` constant is defined in the file `explorer_pointing.h`.

7.54.3 Input parameters

The `xp_attitude_compute` CFI function has the following input parameters:

Table 132: Input parameters of xp_attitude_compute function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|----------------------|---------------|---|-----------------------|--------------------|
| model_id | xl_model_id* | - | Model ID. | - | - |
| time_id | xl_time_id* | - | Structure that contains the time correlations. | - | - |
| sat_nom_trans_id | xp_sat_nom_trans_id* | - | Structure that contains the Sat. Nom. Trans. | - | - |
| sat_trans_id | xp_sat_trans_id* | - | Structure that contains the Sat. Trans. | - | - |
| instr_trans_id | xp_instr_trans_id* | - | Structure that contains the Instr. Trans. | - | - |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude (input/output) | - | - |
| time_ref | long * | - | Time reference ID | - | Complete |
| time | double | - | Time in Processing Format | Decimal days, MJD2000 | [-18262.0,36524.0] |
| pos[3] | double | all | Satellite position vector (Earth Fixed CS) | m | - |
| vel[3] | double | all | Satellite velocity vector (Earth Fixed CS) | m/s | - |
| acc[3] | double | all | Satellite acceleration vector (Earth Fixed CS) | m/s ² | - |
| target_frame | long * | - | Attitude FrameID | - | Complete |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Time Reference ID: time_ref. See [GEN_SUM].
- Attitude Frame ID: attitude_frame_id. See current document, Table 3.

7.54.4 Output parameters

The output parameters of the **xp_attitude_compute** CFI function are:

Table 133: Output parameters of xp_attitude_compute function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|--|---------------|---------------|
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| ierr | long | - | Error vector | - | - |

7.54.5 Warnings and errors

Next table lists the possible error messages that can be returned by the **xp_attitude_compute** CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library **xl_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the **xp_attitude_compute** function by calling the function of the EO_POINTING software library **xl_get_code** (see [GEN_SUM])

Table 134: Error messages of xp_attitude_compute function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------------|--------------------------|--|----------|
| ERR | Time Id. not initialized | No calculation performed | XP_CFI_ATTITUDE_COMPUTE_TIME_STATUS_ERR | 0 |
| ERR | Instrument Trans. Id. not initialized | No calculation performed | XP_CFI_ATTITUDE_COMPUTE_INSTR_TRANS_STATUS_ERR | 1 |
| ERR | Satellite Att. Trans. not initialized | No calculation performed | XP_CFI_ATTITUDE_COMPUTE_SAT_TRANS_STATUS_ERR | 2 |
| ERR | Satellite Nom. Trans not initialized | No calculation performed | XP_CFI_ATTITUDE_COMPUTE_SAT_NOM_TRANS_STATUS_ERR | 3 |
| ERR | Attitude Id. not initialized | No calculation performed | XP_CFI_ATTITUDE_COMPUTE_ATTITUDE_STATUS_ERR | 4 |
| ERR | Wrong input time reference | No calculation performed | XP_CFI_ATTITUDE_COMPUTE_WRONG_TIME | 5 |

| | | | _REF_ERR | |
|------|---|--------------------------|--|----|
| ERR | Attitude Id is being used by another Id. | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_BEING_USED_ERR | 6 |
| ERR | Could not compute orbit reference frame | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_ORB_REF_ERR | 7 |
| ERR | Could not calculate AOCS parametes | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_AOCS_CALC_E_RR | 8 |
| ERR | Could not compute Sat. Nom. Trans frame | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_SAT_NOM_TR_ANS_ERR | 9 |
| ERR | "Could not calculate the true latitude" | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_TRUE_LAT_ER R | 10 |
| ERR | Could not calculate harmonic angles | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_HARMONIC_C_ALC_ERR | 11 |
| ERR | Could not compute Sat.Trans. frame | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_SAT_TRANS_E_RR | 12 |
| ERR | Error computing direction cosine matrix from Sat. Att. to BJ2000 | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_ATT_TO_J2000_ERR | 13 |
| ERR | Could not compute Instrument Trans. frame | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_INSTR_TRANS_ERR | 14 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_MEMORY_ERR | 15 |
| ERR | Both input targets are the same | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_SAME_TARGET_S_ERR | 16 |
| ERR | Error occured during call to XP_Vec_Find | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_VEC_FIND_ERR | 17 |
| ERR | Error occured during call to XP_Create_Base | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_CREATE_BASE_ERR | 18 |
| ERR | Error occured trying to get the interpolated value for the quaternions/angles | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_ATT_FILE_INTE_R_ERR | 19 |
| ERR | Error in a change of coordinate frame | No calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_CHANGE_CS_E_RR | 20 |
| WARN | Warning raised by XP_Vec_Find | Calculation performed | XP_CFI_ATTITUDE_CO_MPUTE_VEC_FIND_WA RN | 21 |

| | | | | |
|-----|----------------------------------|--------------------------|---|----|
| ERR | Error computing Sun position | No calculation performed | XP_ATTITUDE_COMPUT E_SUN_ERR | 22 |
| ERR | Error in a change of time system | No calculation performed | XP_ATTITUDE_COMPUT E_CHANGE_TIME_ERR | 23 |

7.55 xp_attitude_user_set

7.55.1 Overview

The **xp_attitude_user_set** CFI function assigns a user defined Attitude Frame to the *attitude Id*. Input matrix is checked to be orthonormal.

Note on matrix notation:

If XYZ are the axes of the original reference frame, and X'Y'Z' are the axes of the rotated frame, the rows of the rotation matrix are respectively X, Y and Z axes expressed in X'Y'Z' system.

In the C representation, M[0][], M[1][], M[2][] are respectively 1st, and and 3rd row of a rotation matrix M.

The rotation matrix M satisfies the following equivalence:

$$\mathbf{V} = \mathbf{M}^* \mathbf{V}'$$

where \mathbf{V}' is a vector expressed in the X'Y'Z' reference system and \mathbf{V} is expressed in the XYZ reference system.

7.55.2 Calling interface

The calling interface of the **xp_attitude_user_set** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_model_id           model_id = {NULL};
    xl_time_id            time_id = {NULL};
    xp_attitude_id        attitude_id = {NULL};
    long time_ref, target_frame;
    double time, pos[3], vel[3], acc[3];
    double matrix[3][3];
    double matrix_rate[3][3];
    double matrix_rate_rate[3][3];
    double offset[3];
    long ierr[XP_NUM_ERR_ATTITUDE_USER_SET];

    long xp_attitude_user_set(&model_id, &time_id,
                           &attitude_id,
                           /* input / output */
                           &time_ref, &time, &pos, &vel, &acc,
                           &target_frame,
                           matrix, matrix_rate, matrix_rate_rate,
                           offset,
```

```

        ierr);

/* Or, using the run_id */
long run_id;

long xp_attitude_user_set_run(&run_id,
                            &attitude_id,
                            /* input / output */
                            &time_ref, &time, pos, vel, acc,
                            &target_frame,
                            matrix, matrix_rate, matrix_rate_rate,
                            offset, ierr);
}

```

The XP_NUM_ERR_ATTITUDE_USER_SET constant is defined in the file *explorer_pointing.h*.

7.55.3 Input parameters

The **xp_attitude_user_set** CFI function has the following input parameters:

Table 135: Input parameters of xp_attitude_user_set function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-----------------|---------------|---|-----------------------|--------------------|
| model_id | xl_model_id* | - | Model ID | - | - |
| time_id | xl_time_id* | - | Structure that contains the time correlations. | - | - |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude (input/output) | - | - |
| time_ref | long * | - | Time reference ID | - | Complete |
| time | double | - | Time in Processing Format | Decimal days, MJD2000 | [-18262.0,36524.0] |
| pos[3] | double | all | Satellite position vector (Earth Fixed CS) | m | - |
| vel[3] | double | all | Satellite velocity vector (Earth Fixed CS) | m/s | - |
| acc[3] | double | all | Satellite acceleration vector (Earth Fixed CS) | m/s ² | - |
| target_frame | long * | - | Attitude FrameID | - | Complete |
| matrix[3][3] | double | all | Matrix representing the | - | - |

| | | | | | |
|-------------------------|--------|-----|---|---|---|
| | | | transformation from ToD to target_frame | | |
| matrix_rate [3][3] | double | all | Matrix representing the transformation rate from ToD to target_frame | - | - |
| matrix_rate_rate [3][3] | double | all | Matrix representing the transformation rate rate from ToD to target_frame | - | - |
| offset[3] | double | all | Offset in the instrument frame origin | m | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Time Reference ID: time_ref. See [GEN_SUM].
- Attitude Frame ID: attitude_frame_id. See current document, Table 3.

7.55.4 Output parameters

The output parameters of the **xp_attitude_user_set** CFI function are:

Table 136: Output parameters of xp_attitude_user_set function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|--|---------------|---------------|
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| ierr | long | - | Error vector | - | - |

7.55.5 Warnings and errors

Next table lists the possible error messages that can be returned by the **xp_attitude_user_set** CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library **xl_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the **xp_attitude_user_set** function by calling the function of the EO_POINTING software library **xl_get_code** (see [GEN_SUM]).

Table 137: Error messages of xp_attitude_user_set function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--------------------------|--------------------------|--------------------|----------|
| ERR | Time Id. not initialized | No calculation performed | XP_CFI_ATTITUDE_US | 0 |

| | | | | |
|-----|---|---|---|---|
| | | | ER_SET_TIME_STATUS_ERR | |
| ERR | Wrong input target frame | No calculation performed | XP_CFI_ATTITUDE_US ER_SET_WRONG_TAR GET_FRAME_ERR | 1 |
| ERR | Attitude Id. not initialized | No calculation performed | XP_CFI_ATTITUDE_US ER_SET_ATTITUDE_ST ATUS_ERR | 2 |
| ERR | Attitude Id is being used by another Id | No calculation performed | XP_CFI_ATTITUDE_US ER_SET_BEING_USED_ERR | 3 |
| ERR | Could not compute orbit reference frame | No calculation performed | XP_CFI_ATTITUDE_US ER_SET_ORB_REF_ERR | 4 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_ATTITUDE_US ER_SET_MEMORY_ERR | 5 |
| ERR | Matrix is not orthonormal | No calculation performed. The CFI performs a check, with a tolerance of 10^{-6} , that the product of the input matrix and its transposed is the unitary matrix. | XP_CFI_ATTITUDE_USER_SET_MATRIX_ORTHONORMAL_ERR, | 6 |

7.56 xp_get_attitude_data

7.56.1 Overview

The **xp_get_attitude_data** CFI function computes the quaternions or attitude angles (roll, pitch, yaw) that define the rotation between two reference frames:

- A source reference frame (given as input).
- The attitude reference frame given by the input attitude_id. Note that the attitude_id has to be previously computed using the functions xp_attitude_compute or xp_attitude_user_set.

7.56.2 Calling interface

The calling interface of the **xp_get_attitude_data** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_attitude_id      attitude_id = {NULL};
    long data_type;
    long source_ref_type;
    long source_ref;
    xd_att_rec att_rec;
    long ierr[XP_NUM_ERR_GET_ATTITUDE_DATA];
    long xp_get_attitude_data(&attitude_id,
                             &data_type,
                             &source_ref_type,
                             &source_ref,
                             /* output */
                             &att_rec,
                             &ierr);
}
```

The XP_NUM_ERR_GET_ATTITUDE_DATA constant is defined in the file *explorer_pointing.h*.

7.56.3 Input parameters

The **xp_get_attitude_data** CFI function has the following input parameters:

Table 138: Input parameters of xp_get_attitude_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|-------------------------|---------------|---------------|
| attitude_id | xp_attitude_id* | - | Structure that contains | - | - |

| | | | | | |
|-----------------|------|---|--|---|--|
| | | | the Attitude | | |
| data_type | long | - | Requested data type: angles or quaternions. | - | XD_ATT_QUATERNIONS XD_ATTANGLES |
| source_ref_type | long | - | Source reference type: External or Satellite. | - | XP_FRAME_FLAG_EXT XP_FRAME_FLAG_SAT |
| source_ref | long | - | Source reference CS | - | XL_BM2000, XL_HM2000, XL_GM2000, XL_MOD, XL_TOD, XL_PEF, XL_EF XL_LIF, XL_GALACTIC, XL_SAT_ORBITAL_REF, XL_SAT_NOMINAL_ATT, XL_SAT_ATT, XL_INSTR_ATT |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- data_type: See XD_Attitude_data_type_enum [D_H_SUM].
- source_ref_type: See enumeration XP_Frame_flag_enum in current document (Table 3).
- source_ref: See enumeration XL_CS_rl_enum and XL_Attitude_fr_enum in [LIB_SUM].

7.56.4 Output parameters

The output parameters of the `xp_get_attitude_data` CFI function are:

Table 139: Output parameters of xp_get_attitude_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------|------------|---------------|--|---------------|---------------|
| att_rec | xd_att_rec | - | Structure containing the attitude angles/quaternions | - | - |
| ierr | long | - | Error vector | - | - |

7.56.5 Warnings and errors

Next table lists the possible error messages that can be returned by the `xp_get_attitude_data` CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the `xp_get_attitude_data` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 140: Error messages of `xp_get_attitude_data` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|--|----------|
| ERR | Wrong input satellite source frame | No calculation performed | XP_CFI_GET_ATT_DATA_WRONG_SAT_CS_ERR | 0 |
| ERR | Wrong input external source frame | No calculation performed | XP_CFI_GET_ATT_DATA_WRONG_EXT_CS_ERR | 1 |
| ERR | Wrong input source frame type. Should be external or satellite | No calculation performed | XP_CFI_GET_ATT_DATA_WRONG_FRAME_ERR | 2 |
| ERR | Error getting attitude data from input attitude Id. | No calculation performed | XP_CFI_GET_ATT_DATA_GET_ATT_DATA_ERR | 3 |
| ERR | Error computing rotation matrix | No calculation performed | XP_CFI_GET_ATT_DATA_GET_ROTATION_MATRIX_ERR, ERR | 4 |
| ERR | Error in attitude initialization | No calculation performed | XP_CFI_GET_ATT_DATA_GET_ATT_INIT_ERR | 5 |
| ERR | Error in attitude compute | No calculation performed | XP_CFI_GET_ATT_DATA_GET_ATT_COMPUTE_ERR | 6 |
| ERR | Error in matrix inversion | No calculation performed | XP_CFI_GET_ATT_DATA_MATRIX_INV_ERR | 7 |
| ERR | Could not close the attitude id. | No calculation performed | XP_CFI_GET_ATT_DATA_CLOSE_ATT_ERR | 8 |
| ERR | Could not compute the Euler angles | No calculation performed | XP_CFI_GET_ATT_DATA_ANGLE_COMP_ERR | 9 |
| ERR | Could not compute the quaternions | No calculation performed | (XP_CFI_GET_ATT_DATA_QUAT_COMP_ERR | 10 |

7.57 xp_gen_attitude_data

7.57.1 Overview

The **xp_gen_attitude_data** function computes a list of quaternions or attitude angles (roll, pitch, yaw) at an interval given by the user (with a regular time separation) that define the rotation between two reference frames:

- A source reference frame (given as input).
- The attitude frame given by the input attitude definition file.

7.57.2 Calling interface

The calling interface of the **xp_gen_attitude_data** function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xo_orbit_id      orbit_id = {NULL};
    xp_attitude_def  att_def;
    xo_time_interval time_interval;
    double           time_step;
    long              data_type;
    long              source_ref_type;
    long              source_ref;
    xd_att_file      *att_file;
    long ierr[XP_NUM_ERR_GEN_ATTITUDE_DATA];

    long xp_gen_attitude_data(&orbit_id,
                               &att_def,
                               &time_interval,
                               &time_step,
                               &data_type,
                               &source_ref_type,
                               &source_ref,
                               /* output */
                               &att_file,
                               ierr);

    /* Or, using the run_id */
    long run_id;
    long xp_gen_attitude_data_run(&run_id,
```

```

        &time_interval,
        &time_step,
        &data_type,
        &source_ref_type,
        &source_ref,
        /* output */
        &att_file,
        ierr);
}

```

The XP_NUM_ERR_GEN_ATTITUDE_DATA constant is defined in the file *explorer_pointing.h*.

7.57.3 Input parameters

The xp_gen_attitude_data CFI function has the following input parameters:

Table 141: Input parameters of xp_gen_attitude_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|-------------------|---------------|--|---------------|---|
| orbit_id | xp_orbit_id* | - | Structure that contains the satellite orbit data | - | - |
| att_def | xp_attitude_def* | - | Structure defining the attitude frames. It also defines the destination frame. | - | |
| time_interval | xo_time_interval* | - | start-stop time interval for the data generation | - | - |
| time_step | double* | - | Time step between records in the output file data. | seconds | - |
| data_type | long | - | Requested data type: angles or quaternions. | - | XD_ATT_QUATERNIONS XD_ATTANGLES |
| source_ref_type | long | - | Source reference type: External or Satellite. | - | XP_FRAME_FLAG_EXT XP_FRAME_FLAG_SAT |
| source_ref | long | - | Source reference CS | - | XL_BM2000, XL_HM2000, XL_GM2000, XL_MOD, XL_TOD, XL_PEF, |

| | | | | |
|--|--|--|--|---|
| | | | | XL_EF XL_LIF, XL_GALACTIC, XL_SAT_ORBITAL_REF, XL_SAT_NOMINAL_ATT, XL_SAT_ATT, XL_INSTR_ATT |
|--|--|--|--|---|

It is possible to use enumeration values rather than integer values for some of the input arguments:

- `data_type`: See `XD_Attitude_data_type_enum` [D_H_SUM].
- `source_ref_type`: See enumeration `XP_Frame_flag_enum` in current document (Table 143).
- `source_ref`: See enumeration `XL_CS_rl_enum` and `XL_Attitude_fr_enum` in [LIB_SUM].

7.57.4 Output parameters

The output parameters of the `xp_gen_attitude_data` CFI function are:

Table 142: Output parameters of xp_gen_attitude_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|--------------------------|---------------|--|---------------|---------------|
| att_file | <code>xd_att_file</code> | - | Structure containing the list of attitude angles/quaternions | - | - |
| ierr | <code>long</code> | - | Error vector | - | - |

7.57.5 Warnings and errors

Next table lists the possible error messages that can be returned by the `xp_gen_attitude_data` CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message return ed, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the `xp_gen_attitude_data` function by calling the function of the EO_POINTING software library `xp_gen_code` (see [GEN_SUM]).

Table 143: Error messages of xp_gen_attitude_data function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------|------------------|------------|----------|
|------------|---------------|------------------|------------|----------|

| | | | | |
|-----|--|--------------------------|---|----|
| ERR | Wrong input orbit Id. It is not initialized | No calculation performed | XP_CFI_GEN_ATT_DATA _ORBIT_INIT_ERR | 0 |
| ERR | Error in attitude initialization | No calculation performed | XP_CFI_GEN_ATT_DATA _ATT_INIT_ERR | 1 |
| ERR | Wrong input attitude definition structure: Attitude type has a wrong value | No calculation performed | XP_CFI_GEN_ATT_DATA _ATT_TARGET_TYPE_E RR | 2 |
| ERR | Wrong input attitude definition structure: Instrument attitude is not initialized | No calculation performed | XP_CFI_GEN_ATT_DATA _INSTR_ATT_ERR | 3 |
| ERR | Wrong input attitude definition structure: Satellite attitude is not initialized | No calculation performed | XP_CFI_GEN_ATT_DATA _SAT_ATT_ERR | 4 |
| ERR | Wrong input attitude definition structure: Satellite nominal attitude is not initialized | No calculation performed | XP_CFI_GEN_ATT_DATA _SAT_NOM_ATT_ERR | 5 |
| ERR | Could not compute the start interval UTC time | No calculation performed | XP_CFI_GEN_ATT_DATA _START_INTERVAL_ERR | 6 |
| ERR | Could not compute the stop interval UTC time | No calculation performed | XP_CFI_GEN_ATT_DATA _STOP_INTERVAL_ERR | 7 |
| ERR | Wrong input time step. It cannot be negative | No calculation performed | XP_CFI_GEN_ATT_DATA _TIME_STEP_ERR | 8 |
| ERR | Wrong input data type. It should be quaternions or angles | No calculation performed | XP_CFI_GEN_ATT_DATA _DATA_TYPE_ERR | 9 |
| ERR | Wrong input satellite source frame | No calculation performed | XP_CFI_GEN_ATT_DATA _SAT_CS_ERR | 10 |
| ERR | Wrong input external source frame | No calculation performed | XP_CFI_GEN_ATT_DATA _EXTERNAL_CS_ERR | 11 |
| ERR | Wrong input source frame type. Should be external or satellite | No calculation performed | XP_CFI_GEN_ATT_DATA _CS_TYPE_ERR | 12 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_GEN_ATT_DATA _MEM_ALLOC_ERR | 13 |
| ERR | Error computing the satellite state vector | No calculation performed | XP_CFI_GEN_ATT_DATA _OSV_COMP_ERR | 14 |
| ERR | Error in attitude compute | No calculation performed | XP_CFI_GEN_ATT_DATA _ATT_COMP_ERR | 15 |
| ERR | Could not compute the | No calculation performed | XP_CFI_GEN_ATT_DATA | 16 |

7.58 xp_gen_attitude_file

7.58.1 Overview

The **xp_gen_attitude_file** function creates an attitude file with the list of quaternions or attitude angles (roll, pitch, yaw) at an interval given by the user (with a regular time separation) that define the rotation between two reference frames:

- A source reference frame (given as input).
- The attitude frame given by the input attitude definition file.

7.58.2 Calling interface

The calling interface of the **xp_gen_attitude_file** function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xo_orbit_id          orbit_id = {NULL};
    xp_attitude_def     att_def;
    xo_time_interval    time_interval;
    double               time_step;
    long                 data_type;
    long                 source_ref_type;
    long                 source_ref;
    char                *output_dir,
    char                *file_class,
    long                 *version_number,
    char                *fh_system,
    char                filename[XD_MAX_STR],
    long ierr[XP_NUM_ERR_GEN_ATTITUDE_FILE];

    long xp_gen_attitude_file(&orbit_id,
                               &att_def,
                               &time_interval,
                               &time_step,
                               &data_type,
                               &source_ref_type,
                               &source_ref,
                               output_dir,
                               file_class,
                               &version_number,
```

```

        fh_system,
        /* input/output */
        filename,
        ierr);

/* Or, using the run_id */
long run_id;
long xp_gen_attitude_data_run(&run_id,
                               &time_interval,
                               &time_step,
                               &data_type,
                               &source_ref_type,
                               &source_ref,
                               output_dir,
                               file_class,
                               &version_number,
                               fh_system,
                               /* input/output */
                               filename,
                               ierr);
}

```

The XP_NUM_ERR_GEN_ATTITUDE_FILE constant is defined in the file *explorer_pointing.h*.

7.58.3 Input parameters

The xp_gen_attitude_file CFI function has the following input parameters:

Table 144: Input parameters of xp_gen_attitude_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|-------------------|---------------|--|---------------|---------------|
| orbit_id | xp_orbit_id* | - | Structure that contains the satellite orbit data | - | - |
| att_def | xp_attitude_def* | - | Structure defining the attitude frames. It also defines the destination frame. | - | |
| time_interval | xo_time_interval* | - | start-stop time interval for the data generation | - | - |
| time_step | double* | - | Time step between records in the output file | seconds | - |

| | | | | | |
|-----------------|------|---|--|---|--|
| | | | data. | | |
| data_type | long | - | Requested data type: angles or quaternions. | - | XD_ATT_QUATERNIONS XD_ATTANGLES |
| source_ref_type | long | - | Source reference type: External or Satellite. | - | XP_FRAME_FLAG_EXT XP_FRAME_FLAG_SAT |
| source_ref | long | - | Source reference CS | - | XL_BM2000, XL_HM2000, XL_GM2000, XL_MOD, XL_TOD, XL_PEF, XL_EF XL_LIF, XL_GALACTIC, XL_SAT_ORBITAL_REF, XL_SAT_NOMINAL_ATT, XL_SAT_ATT, XL_INSTR_ATT |
| output_dir | char | - | Directory for the output file. If empty, the current directory is chosen. | - | - |
| file_class | char | - | File class | - | - |
| version_number | long | - | File version | - | - |
| fh_system | char | - | system | - | - |
| filename | char | - | Output file name. If empty, the file is generated automatically and returned to this variable. | - | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- data_type: See XD_Attitude_data_type_enum [D_H_SUM].
- source_ref_type: See enumeration XP_Frame_flag_enum in current document (Table 146).
- source_ref: See enumeration XL_CS_rl_enum and XL_Attitude_fr_enum in [LIB_SUM].

7.58.4 Output parameters

The output parameters of the `xp_gen_attitude_file` CFI function are:

Table 145: Output parameters of xp_gen_attitude_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.58.5 Warnings and errors

Next table lists the possible error messages that can be returned by the `xp_gen_attitude_file` CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the `xp_gen_attitude_file` function by calling the function of the EO_POINTING software library `xp_gen_code` (see [GEN_SUM]).

Table 146: Error messages of xp_gen_attitude_file function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---------------------------------|----------|
| ERR | Error generating attitude data | No calculation performed | XP_CFI_GEN_ATT_FILE_GENDATA_ERR | 0 |
| ERR | Could not get the Fixed header data | No calculation performed | XP_CFI_GEN_ATT_FILE_GENFHR_ERR | 1 |
| ERR | No data generated for the requested interval | No calculation performed | XP_CFI_GEN_ATT_FILE_NO_DATA_ERR | 2 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_GEN_ATT_FILE_MEM_ERR | 3 |
| ERR | Error writing attitude file to disk | No calculation performed | XP_CFI_GEN_ATT_FILE_WRITE_ERR | 4 |

7.58.6 Executable Program

The gen_attitude executable program can be called from a shell as:

gen_attitude

```

-sat satellite_name
-tref time_ref
{
    -tstart start_time -tstop stop_time (decimal days) |

```

```
-tastart start_time -tastop stop_time (CCSDSA format) |  
-ostart start_orbit -ostop stop_orbit (orbits)  
}  
-orbtyp "orbit file type"  
-orbf "orbit file name"  
-atdef "attitude definition file name"  
-attyp "attitude data type, angles or quaternions"  
-tstep "Time step between generated attitude records (seconds)"  
-cs "source reference frame"  
[-dir output_dir] (default: current directory)  
[-atf output_filename] (default: name generated automatically)  
[-flcl file_class] (empty string by default)  
[-vers version] (version=1 by default)  
[-eoffs ffs_version] (Earth Observation File Format Standard Version)  
[-fhsys fh_system] (empty string by default)  
[ -v ]  
[ -xd_v ]  
[ -xl_v ]  
[ -xo_v ]  
[ -xp_v ]  
[ -help ]  
[ -show ]  
[ -with_xslt ] (add xslt reference with default style sheet)  
[  
    (-tai TAI_time -gps GPS_time -utc UTC_time -ut1 UT1_time) |  
    (-tm0 time0 -tm1 time1) | (-orb0 orbit0 -orb1 orbit1) } )  
]
```

Note that:

- Order of parameters does not matter.
- Bracketed parameters are not mandatory.
- Options between curly brackets and separated by a vertical bar are mutually exclusive.
- [-xd_v] option for EXPLORER_DATA_HANDLING Verbose mode.
- [-xl_v] option for EXPLORER_LIB Verbose mode.

- [-xo_v] option for EXPLORER_ORBIT Verbose mode.
- [-xp_v] option for EXPLORER_POINTING Verbose mode.
- [-v] option for Verbose mode for all libraries (default is Silent).
- [-show] displays the inputs of the function and the results.
- Possible values for satellite_name: ERS1, ERS2, ENVISAT, METOP1, METOP2, METOP3,
CRYOSAT, ADM, GOCE, SMOS, TERRASAR, EARTHCARE,
SWARM_A, SWARM_B, SWARM_C,
SENTINEL_1A, SENTINEL_1B, SENTINEL_1C,
SENTINEL_2A, SENTINEL_2B, SENTINEL_2C,
SENTINEL_3A, SENTINEL_3B, SENTINEL_3C,
JASON_CSA, JASON_CSB,
METOP_SG_A1, METOP_SG_A2, METOP_SG_A3,
METOP_SG_B1, METOP_SG_B2, METOP_SG_B3,
SENTINEL_5P,
BIOMASS, SENTINEL_5, SAOCOM_CS, FLEX,
SEOSAT, GENERIC.
- Possible values for time_model: USER, NONE, IERS_B_PREDICTED,
IERS_B_RESTITUTED, FOS_PREDICTED,
FOS_RESTITUTED, DORIS_PRELIMINARY, DORIS_PRECISE,
DORIS_NAVIGATOR, OSF.
- Possible values for time_ref and time_reference: UNDEF, TAI, UTC, UT1.
- Possible values for "orbit file type": OSF, POF, DORISNAV, ROF, TLE, DORISPREM, DORISPREC.
- Possible values for ffs_version: 0 (Default FFS), 1 (FFS version 1), 2 (FFS version 2), 3 (FFS version 3).
- Possible values for "Attitude data type": ANGLES, QUATERNIONS.
- Possible values for "source reference frame": GALACTIC (= Galactic CS)
BM2000 (= Barycentric Mean of 2000.0 CS)
HM2000 (= Heliocentric Mean of 2000.0 CS)
GM2000 (= Geocentric Mean of 2000.0 CS)
MOD (= Mean of Date CS)
TOD (= True of Date CS)
PEF (= Pseudo Earth Fixed CS)
EF (= Earth Fixed CS)
LIF (= Launch Inertial CS)
ORBITAL (= Satellite orbital frame CS)

NOM_ATT (= Satellite nominal attitude CS)

ATT (= Satellite attitude CS)

INSTR (= Satellite instrument CS)

- Time references need to be initialized.

The inputs needed for this issue are provided in the last three lines of parameters. Note that only one set of parameters should be introduced:

1. TAI, GPS, UTC and UT1 input times (as in xl_time_ref_init "\n");
2. A file with time reference data, the time mode, the time reference name and a time range (as in xl_time_ref_init_file)

7.59 xp_attitude_close

7.59.1 Overview

The **xp_attitude_close** CFI function cleans up any memory allocation performed by the Attitude functions.

7.59.2 Calling Interface

The calling interface of the **xp_attitude_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_attitude_id attitude_id = {NULL};
    long ierr[XP_NUM_ERR_ATTITUDE_CLOSE], status;

    status = xp_attitude_close(&attitude_id, ierr);
}
```

The **XP_NUM_ERR_ATTITUDE_CLOSE** constant is defined in the file *explorer_pointing.h*.

7.59.3 Input Parameters

The `xp_attitude_close` CFI function has the following input parameters:

Table 147: Input parameters of xp_attitude_close function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|----------------------------------|---------------|---------------------------------------|---------------|---------------|
| attitude_id | <code>xp_attitude_id</code> * | - | Structure that contains the Attitude. | - | - |

7.59.4 Output Parameters

The output parameters of the `xp_attitude_close` CFI function are:

Table 148: Output parameters of xp_attitude_close

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.59.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_attitude_close` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_attitude_close` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 149: Error messages of xp_attitude_close function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|------------------------------------|----------|
| ERR | Could not close Attitude Id. The Attitude Id. is not initialized or it is being used | No calculation performed | XP_CFI_ATTITUDE_CLOSE_WRONG_ID_ERR | 0 |

7.60 xp_attitude_get_id_data

7.60.1 Overview

The **xp_attitude_get_id_data** CFI function returns attitude initialization data.

7.60.2 Calling interface

The calling interface of the **xp_attitude_get_id_data** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id;
    long status;
    xp_attitude_id_data data;
    status = xp_attitude_get_id_data (&attitude_id,
                                      &data);
}
```

7.60.3 Input parameters

The **xp_attitude_get_id_data** CFI function has the following input parameters:

Table 150: Input parameters of xp_attitude_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|------------------|---------------|---------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the Attitude. | - | - |

7.60.4 Output parameters

The output parameters of the **xp_attitude_get_id_data** CFI function are:

Table 151: Output parameters of xp_attitude_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|---------------------|---------------|------------------------------|---------------|---------------|
| xp_attitude_get_id_data | long | - | Status flag | - | - |
| data | xp_attitude_id_data | - | Attitude initialization data | - | - |

7.60.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The attitude_id was not initialised.
- The attitude_id initialization does not allow the use of this function.

7.61 xp_attitude_set_id_data

7.61.1 Overview

The **xp_attitude_set_id_data** CFI function changes the harmonic data used for the satellite attitude initialization. Input matrix is checked to be orthonormal.

7.61.2 Calling interface

The calling interface of the **xp_attitude_set_id_data** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id;
    long status;
    xp_attitude_id_data data;
    status = xp_attitude_set_id_data (&attitude_id,
                                      &data);
}
```

7.61.3 Input parameters

The **xp_attitude_set_id_data** CFI function has the following input parameters:

Table 152: Input parameters of xp_attitude_set_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|---------------------|---------------|---|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the Attitude (input / output parameter) | - | - |
| data | xp_attitude_id_data | - | Attitude initialization data | - | - |

7.61.4 Output parameters

The output parameters of the **xp_attitude_set_id_data** CFI function are:

Table 153: Output parameters of xp_attitude_set_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|------------------|---------------|---|---------------|---------------|
| xp_attitude_set_id_data | long | - | Status flag | - | - |
| attitude_id | xp_attitude_id * | - | Structure that contains the Attitude. (input / output parameter) | - | - |

7.61.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The attitude_id was not initialised.
- The attitude_id initialization does not allow the use of this function.

7.62 xp_attitude_get_model_id

7.62.1 Overview

The **xp_attitude_get_model_id** CFI function retrieves the model ID from the input attitude ID.

7.62.2 Calling interface

The calling interface of the **xp_attitude_get_model_id** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id = {NULL};
    xl_model_id model_id;
    model_id =      xp_attitude_get_model_id (&attitude_id);
}
```

7.62.3 Input parameters

The **xp_attitude_get_model_id** CFI function has the following input parameters:

Table 154: Input parameters of xp_attitude_get_model_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|------------------|---------------|--------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the attitude | - | - |

7.62.4 Output parameters

The output parameters of the **xp_attitude_get_model_id** CFI function are:

Table 155: Output parameters of xp_attitude_get_model_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------|--------|---------------|-------------------------|---------------|---------------|
| xp_attitude_get_model_id | long | - | Status flag | - | - |

7.62.5 Warnings and errors

This function does not return any error/warning code. If there is an error, then the returned model ID will be set to NULL (no initialised)

The possible causes of error are:

- The attitude_id was not initialised.

7.63 xp_attitude_get_time_id

7.63.1 Overview

The xp_attitude_get_time_id CFI function retrieves the time_id from the input attitude_id.

7.63.2 Calling interface

The calling interface of the xp_attitude_get_time_id CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id = {NULL};
    xl_time_id time_id;
    time_id = xp_attitude_get_time_id (&attitude_id);
}
```

7.63.3 Input parameters

The xp_attitude_get_time_id CFI function has the following input parameters:

Table 156: Input parameters of xp_attitude_get_time_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|------------------|---------------|--------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the attitude | - | - |

7.63.4 Output parameters

The output parameters of the xp_attitude_get_time_id CFI function are:

Table 157: Output parameters of xp_attitude_get_time_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------|------------|---------------|---|---------------|---------------|
| time_id | xl_time_id | - | time_id used for the attitude_id initialization | - | - |

7.63.5 Warnings and errors

This function does not return any error/warning code. In case of error, an empty time_id is returned (initialised with NULL).

7.64 xp_attitude_get_sat_nom_trans_id

7.64.1 Overview

The `xp_attitude_get_sat_nom_trans_id` CFI function retrieves the snmt_id from the input attitude_id.

7.64.2 Calling interface

The calling interface of the `xp_attitude_get_sat_nom_trans_id` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id = {NULL};
    xp_sat_nom_trans_id snmt_id;
    snmt_id = xp_attitude_get_sat_nom_trans_id (&attitude_id);
}
```

7.64.3 Input parameters

The `xp_attitude_get_sat_nom_trans_id` CFI function has the following input parameters:

Table 158: Input parameters of xp_attitude_get_sat_nom_trans_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|------------------|---------------|--------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the attitude | - | - |

7.64.4 Output parameters

The output parameters of the `xp_attitude_get_sat_nom_trans_id` CFI function are:

Table 159: Output parameters of xp_attitude_get_sat_nom_trans_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------|---------------------|---------------|---|---------------|---------------|
| snmt_id | xp_sat_nom_trans_id | - | snmt_id used for the attitude_id initialization | - | - |

7.64.5 Warnings and errors

This function does not return any error/warning code. In case of error, an empty snmt_id is returned (initialised with NULL).

7.65 xp_attitude_get_sat_trans_id

7.65.1 Overview

The **xp_attitude_get_sat_trans_id** CFI function retrieves the st_id from the input attitude_id.

7.65.2 Calling interface

The calling interface of the **xp_attitude_get_sat_trans_id** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id = {NULL};
    xp_sat_trans_id st_id;
    st_id = xp_attitude_get_sat_trans_id (&attitude_id);
}
```

7.65.3 Input parameters

The **xp_attitude_get_sat_trans_id** CFI function has the following input parameters:

Table 160: Input parameters of xp_attitude_get_sat_trans_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|------------------|---------------|--------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the attitude | - | - |

7.65.4 Output parameters

The output parameters of the **xp_attitude_get_sat_trans_id** CFI function are:

Table 161: Output parameters of xp_attitude_get_sat_trans_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-----------------|---------------|--------------------------------|---------------|---------------|
| st_id | xp_sat_trans_id | - | st_id used for the attitude_id | - | - |

| | | | | |
|--|--|--|----------------|--|
| | | | initialization | |
|--|--|--|----------------|--|

7.65.5 Warnings and errors

This function does not return any error/warning code. In case of error, an empty st_id is returned (initialised with NULL).

7.66 xp_attitude_get_instr_id

7.66.1 Overview

The `xp_attitude_get_instr_id` CFI function retrieves the inst_id from the input attitude_id.

7.66.2 Calling interface

The calling interface of the `xp_attitude_get_instr_id` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_attitude_id attitude_id = {NULL};
    xp_instr_trans_id inst_id;
    inst_id = xp_attitude_get_instr_id (&attitude_id);
}
```

7.66.3 Input parameters

The `xp_attitude_get_instr_id` CFI function has the following input parameters:

Table 162: Input parameters of xp_attitude_get_instr_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|------------------|---------------|--------------------------------------|---------------|---------------|
| attitude_id | xp_attitude_id * | - | Structure that contains the attitude | - | - |

7.66.4 Output parameters

The output parameters of the `xp_attitude_get_instr_id` CFI function are:

Table 163: Output parameters of xp_attitude_get_instr_id function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
|--------|--------|---------------|-------------------------|---------------|---------------|

| | | | | | |
|---------|-------------------|---|---|---|---|
| inst_id | xp_instr_trans_id | - | inst_id used for the attitude_id initialization | - | - |
|---------|-------------------|---|---|---|---|

7.66.5 Warnings and errors

This function does not return any error/warning code. In case of error, an empty inst_id is returned (initialised with NULL).

7.67 xp_change_frame

7.67.1 Overview

The **xp_change_frame** CFI function changes the coordinate or attitude frame of a location or direction by keeping the location or direction in inertial space identical. Both all coordinate frames and all attitude frames are supported.

When changing the frame for a location (mode_flag = XP_MODE_FLAG_LOCATION), the difference between the frame origins is taken into account.

When changing the frame for a direction (mode_flag = XP_MODE_FLAG_DIRECTION), the output of the function is a direction, that does not depend on the origin of reference frame of the input vector. Therefore, in this specific case, the instrument offsets are not taken into account.

7.67.2 Calling interface

The calling interface of the **xp_change_frame** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_model_id model_id = {NULL};
    long sat_id, mode_flag, frame_flag_in, frame_id_in,
          frame_flag_out, frame_id_out, time_ref;
    xl_time_id           time_id = {NULL};
    xp_sat_nom_trans_id sat_nom_trans_id = {NULL};
    xp_sat_trans_id     sat_trans_id = {NULL};
    xp_instr_trans_id   instr_trans_id = {NULL};
    double time;
    double pos[3], vel[3], acc[3];
    long deriv;
    double vec_in[3], vec_rate_in[3], vec_rate_rate_in[3];
```

```
double vec_out[3], vec_rate_out[3], vec_rate_rate_out[3];
long ierr[XP_NUM_ERR_CHANGE_FRAME], status;
status = xp_change_frame (&sat_id, &model_id,
                           &time_id,
                           &sat_nom_trans_id,
                           &sat_trans_id,
                           &instr_trans_id,
                           &mode_flag,
                           &frame_flag_in, &frame_id_in,
                           &frame_flag_out, &frame_id_out,
                           &time_ref, &time,
                           pos, vel, acc, &deriv,
                           vec_in, vec_rate_in, vec_rate_rate_in,
                           vec_out, vec_rate_out, vec_rate_rate_out,
                           ierr);

/* Or, using the run_id */
long run_id;

status =     xp_change_frame_run (&run_id,
                                   &mode_flag,
                                   &frame_flag_in, &frame_id_in,
                                   &frame_flag_out, &frame_id_out,
                                   &time_ref, &time,
                                   pos, vel, acc, &deriv,
                                   vec_in, vec_rate_in, vec_rate_rate_in,
                                   vec_out, vec_rate_out, vec_rate_rate_out,
                                   ierr);

}
```

The XP_NUM_ERR_CHANGE_FRAME constant is defined in the file *explorer_pointing.h*.

7.67.3 Input parameters

The `xp_change_frame` CFI function has the following input parameters:

Table 164: Input parameters of `xp_change_frame` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------------|-----------------------------------|---------------|---|--------------------------|--|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>model_id</code> | <code>xl_model_id*</code> | - | Model ID | - | - |
| <code>time_id</code> | <code>xl_time_id*</code> | - | Structure that contains the time correlations. | - | - |
| <code>sat_nom_trans_id</code> | <code>xp_sat_nom_trans_id*</code> | - | Structure that contains the Sat. Nom. Trans. | - | - |
| <code>sat_trans_id</code> | <code>xp_sat_trans_id*</code> | - | Structure that contains the Sat. Trans. | - | - |
| <code>instr_trans_id</code> | <code>xp_instr_trans_id*</code> | - | Structure that contains the Instr. Trans. | - | - |
| <code>mode_flag</code> | <code>long *</code> | - | Selection of location or direction calculus | | Complete |
| <code>frame_flag_in</code> | <code>long *</code> | - | Selection of Coordinate or Attitude Frame on input | | Complete |
| <code>frame_id_in</code> | <code>long *</code> | | Coordinate Frame id or Attitude Frame id on input | | Complete |
| <code>frame_flag_out</code> | <code>long *</code> | - | Selection of Coordinate or Attitude Frame on output | | Complete |
| <code>frame_id_out</code> | <code>long *</code> | | Coordinate Frame id or Attitude Frame id on output | | Complete |
| <code>time_ref</code> | <code>long *</code> | - | Time reference ID | - | Complete |
| <code>time</code> | <code>double</code> | - | Time in Processing Format | Decimal days, MJD2000 | [-18262.0,36524.0] |
| <code>pos[3]</code> | <code>double</code> | all | Satellite position vector (Earth Fixed CS) | m | - |
| <code>vel[3]</code> | <code>double</code> | all | Satellite velocity vector (Earth Fixed CS) | m/s | - |
| <code>acc[3]</code> | <code>double</code> | all | Satellite acceleration vector (Earth Fixed CS) | m/s ² | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |

| | | | | | |
|---------------------|--------|-----|--|--------------------------------------|---|
| vec_in[3] | double | all | Position (direction) vector (Frame in) | m or - | - |
| vec_rate_in[3] | double | all | Velocity (direction) vector (Frame in) | m/s or 1/s | - |
| vec_rate_rate_in[3] | double | all | Acceleration (direction) vector (Frame in) | m/s ² or 1/s ² | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Time Reference ID: time_ref. See [GEN_SUM].
- Selection of location or direction calculus: mode_flag. See current document, Table 3.
- Selection of Coordinate or Attitude Frame: frame_flag. See current document, Table 3.

7.67.4 Output parameters

The output parameters of the `xp_change_frame` CFI function are

Table 165: Output parameters of `xp_change_frame` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|--------|---------------|---|--------------------------------------|---------------|
| vec_out[3] | double | all | Position (direction) vector (Frame out) | m or - | - |
| vec_rate_out[3] | double | all | Velocity (direction) vector (Frame out) | m/s or 1/s | - |
| vec_rate_rate_out[3] | double | all | Acceleration (direction) vector (Frame out) | m/s ² or 1/s ² | - |
| ierr | long | - | Error vector | - | - |

7.67.5 Warnings and errors

Next table lists the possible error messages that can be returned by the `xp_change_frame` CFI function after translating the returned extended status flag into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained translating the extended status flag returned by the `xp_change_frame` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 166: Error messages of `xp_change_frame` function

| Error | Error message | Cause and impact | Error code | Error |
|-------|---------------|------------------|------------|-------|
|-------|---------------|------------------|------------|-------|

| type | | | | No |
|-------------|-------------------------------------|--------------------------|-------------------------------------|-----------|
| ERR | Could not initialize the attitude | No calculation performed | XP_CHANGE_FRAME_ATTITUDE_INIT_ERR | 0 |
| ERR | Frame input flag is not correct | No calculation performed | XP_CHANGE_FRAME_I_NPUT_FRAME_ERR | 1 |
| ERR | Frame output flag is not correct | No calculation performed | XP_CHANGE_FRAME_OUTPUT_FRAME_ERR | 2 |
| ERR | Error calling xl_change_cart_cs | No calculation performed | XP_CHANGE_FRAME_CHANGE_CART_CS_ER R | 3 |
| ERR | Could not compute the attitude | No calculation performed | XP_CHANGE_FRAME_ATTITUDE_COMP_ERR | 4 |
| ERR | The Attitude Id could not be closed | No calculation performed | XP_CHANGE_FRAME_ATTITUDE_CLOSE_ER R | 5 |

7.68 xp_atmos_init

7.68.1 Overview

The **xp_atmos_init** CFI function initialises the atmospheric model for a given satellite. The initialised values will be stored in the *atmos_id* output structure.

7.68.2 Calling Interface

The calling interface of the **xp_atmos_init** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long atmos_mode, atmos_model;
    char atmos_file[XL_MAX_STR];
    xp_atmos_id atmos_id = {NULL};
    long ierr[XP_NUM_ERR_ATMOS_INIT], status;

    status = xp_atmos_init(&atmos_mode, &atmos_model, atmos_file,
                          &atmos_id, ierr);
}
```

The **XP_NUM_ERR_ATMOS_INIT** constant is defined in the file *explorer_pointing.h*.

7.68.3 Input Parameters

The `xp_atmos_init` CFI function has the following input parameters:

Table 167: Input parameters of xp_atmos_init function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|--------|---------------|--|---------------|---------------|
| atmos_mode | long * | - | Atmosphere initialization mode | - | Complete |
| atmos_model | long * | - | Not Used in the current implementation. | - | - |
| atmos_file | char[] | - | File used for atmosphere initialization. It is required when the input atmos_mode is: - User initialization mode (n-z table, see section 10) - User LUT mode | - | Complete |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Atmosphere Initialization Mode: atmos_mode. See current document, Table 3 .

7.68.4 Output Parameters

The output parameters of the `xp_atmos_init` CFI function are:

Table 168: Output parameters of xp_atmos_init

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|--------------|---------------|--|---------------|---------------|
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | - |
| ierr | long | - | Error vector | - | - |

7.68.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_atmos_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_atmos_init** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 169: Error messages of xp_atmos_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|-------------------------------------|----------|
| ERR | Atmosphere Mode ID is not correct | No calculation performed | XP_CFI_ATMOS_INIT_MODE_ID_ERR | 0 |
| ERR | Atmosphere Model ID is not correct | No calculation performed | XP_CFI_ATMOS_INIT_MODEL_ID_ERR | 1 |
| ERR | Atmosphere initialization file could not be opened | No calculation performed | XP_CFI_ATMOS_INIT_FILE_NOT_OPEN_ERR | 2 |
| ERR | Unable to store atmosphere initialization file (not enough memory) | No calculation performed | XP_CFI_ATMOS_INIT_MEMORY_ERR | 3 |
| ERR | Error while reading atmosphere initialization file | No calculation performed | XP_CFI_ATMOS_INIT_FILE_READING_ERR | 4 |

7.69 xp_atmos_close

7.69.1 Overview

The **xp_atmos_close** CFI function cleans up any memory allocation performed by the **xp_atmos_init** functions.

7.69.2 Calling Interface

The calling interface of the **xp_atmos_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_atmos_id atmos_id = {NULL};
    long ierr[XP_NUM_ERR_ATMOS_CLOSE], status;

    status = xp_atmos_close(&atmos_id, ierr);
}
```

The **XP_NUM_ERR_ATMOS_CLOSE** constant is defined in the file *explorer_pointing.h*.

7.69.3 Input Parameters

The `xp_atmos_close` CFI function has the following input parameters:

Table 170: Input parameters of `xp_atmos_close` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|---------------------------|---------------|--|---------------|---------------|
| atmos_id | <code>xp_atmos_id*</code> | - | Structure that contains the atmosphere initialization. | - | - |

7.69.4 Output Parameters

The output parameters of the `xp_atmos_close` CFI function are:

Table 171: Output parameters of `xp_atmos_close`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.69.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_atmos_close` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_atmos_close` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 172: Error messages of `xp_atmos_close` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---------------------------------|----------|
| ERR | Could not close the Atmos. Id. as it is not initialized or it is being used | No calculation performed | XP_CFI_ATMOS_CLOSE_WRONG_ID_ERR | 0 |

7.70 xp_atmos_get_id_data

7.70.1 Overview

The **xp_atmos_get_id_data** CFI function returns atmospheric initialization data.

7.70.2 Calling interface

The calling interface of the **xp_atmos_get_id_data** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_atmos_id atmos_id;
    long status;
    xp_atmos_id_data data;
    status = xp_atmos_get_id_data (&atmos_id, &data);
}
```

7.70.3 Input parameters

The **xp_atmos_get_id_data** CFI function has the following input parameters:

Table 173: Input parameters of xp_atmos_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|---------------|---------------|-------------------------|---------------|---------------|
| atmos_id | xp_atmos_id * | - | Atmospheric Id. | - | - |

7.70.4 Output parameters

The output parameters of the **xp_atmos_get_id_data** CFI function are:

Table 174: Output parameters of xp_atmos_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------|------------------|---------------|---------------------------------|---------------|---------------|
| xp_atmos_get_id_data | long | - | Status flag | - | - |
| data | xp_atmos_id_data | - | Atmospheric initialization data | - | - |

7.70.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The atmos_id was not initialised.

7.71 xp_dem_init

7.71.1 Overview

The **xp_dem_init** CFI function initializes the digital elevation model (DEM). The DEM is initialized using the DEM configuration file (see [D_H_SUM]) which contains some characteristics that can be configured (see [MCD] for further details about the DEM models).

Finally the initialisation values will be stored in the *dem_id* output structure.

7.71.2 Location of DEM dataset

The DEM files are looked for in the directory specified in the field Directory in the DEM configuration file (see [D_H_SUM]). If this field is empty, the DEM files are looked for in the directory where the DEM configuration file is placed.

7.71.3 Access to DEM dataset

Depending on the Cache_Type field in the DEM configuration file (see [D_H_SUM]), one of the following methods is used to access the DEM dataset:

- FIFO_CACHE (default): memory is reserved for holding DEM data. As soon as an altitude value is requested and is not yet available in memory, the corresponding data file is loaded in memory. When the maximum size of reserved memory (configurable with the field Cache_Max_Size) is exceeded, memory is made available with a First In – First Out policy, that is memory correspondent to the file loaded earliest is made available for the file to be loaded.
- PRELOAD_CACHE: memory is reserved for holding DEM data. The user shall load in memory the needed files in advance via the function *xp_dem_id_configure* (see section 7.76). Request of a value not available in memory would result in an error.
- NO_CACHE: no memory is reserved for holding DEM data. The dataset is accessed via a single direct I/O access to the file storing the requested value.

In the case of GDEM, due to the special structure of the tiles, loading them to memory can take much time, so it is not recommended the use of cache methods.

Choice of the method that best fits user's needs depends on many aspects including HW/SW setup and the type of user application:

- 1) The FIFO_CACHE is recommended for user applications able to request to the operating system a large amount of physical memory and that require making a large numbers of DEM computations per DEM area i.e. when several DEM computations are done reading the same file or small set of files covering the same region.
- 2) The PRELOAD_CACHE is recommended for multithreading applications. Note that memory holding DEM data can be shared amongst several threads. In the FIFO_CACHE, as memory content can change at runtime, mutual exclusion mechanisms are implemented in order to avoid threads to access inconsistent data. Such mechanisms are not needed in the PRELOAD_CACHE methods and therefore multithreading applications may run more efficiently. However the user is requested to estimate the area (in terms of the longitude/latitude boundaries) that will be requested during computations.

-
- 3) The above methods using memory to hold DEM data do not improve performance (or make even performance worse) of applications running with low amount of physical memory available or when DEM request is sporadic per DEM area. In all these cases, the user is recommended to set Cache_Type to NO_CACHE. For example, applications making sporadic accesses and in different DEM areas will not benefit of the caching methods, as the advantage of having a fast access to data is lost by the disadvantage of continuously load new files correspondent to different areas.

The default configuration is (i.e. when fields are not provided in the file):

- Cache_Type = FIFO_CACHE
- Cache_Max_Size = 2 GigaBytes

Values of Cache_Type and Cache_Max_Size can be changed at runtime under certain conditions using the function xp_dem_id_configure.

Memory is allocated using the malloc() C library function. Therefore performance of DEM access using caching strictly depends on the implementation of such library and on memory management from the Operating System. Performance of access to memory depends on many factors that can be tuned by the user. For the sake of example, if, as it normally happens in Linux systems, the memory request is larger than a given threshold size, the memory will be allocated in the virtual memory space and this may result in several page faults at runtime, leading to inefficiencies in the execution. The user can improve this by tuning the threshold size (i.e. using the mallopt() C library, if available). In order to get the best advantages from the caching methods, the user is therefore recommended to evaluate and tackle platform specific issues to memory allocation and management.

7.71.4 DEM maximum altitude algorithm

If the mini tile configuration is provided (MiniTile_Configuration tag) in the DEM configuration file (see [D_H_SUM]), the maximum altitude algorithm is used to compute DEM intersection. This algorithm consists in the following:

- The tiles are divided in sub-sections (mini-tiles), according to the configuration provided in DEM configuration file: Lon_Size and Lat_Size tags. For example, if the tile is 15 degrees long in longitude and 15 degrees long in latitude, and Lon_Size and Lat_Size are 5 degrees and 5 degrees respectively, the tile would have 9 mini-tiles equal in size between them.
- In the DEM configuration of mini-tiles, also the tag Filename is provided, which corresponds to the name (or path) of the binary file which contains the maximum altitude corresponding to each mini-tile. This file can be generated with function xp_gen_dem_max_altitude_file. If no path is provided, the binary file is looked for in current directory and the DEM directory.
- Internally, the algorithm checks if the altitude of the rays when crossing above each mini-tile is higher or lower than maximum altitude contained in the mini-tile. If the altitude is lower, the mini-tile is computed to look for an intersection; if not, the mini-tile is skipped and the following mini-tile is checked.

Note: the algorithm is not executed if the difference in latitude/longitude of start and end points in ray search is less than mini-tile size.

7.71.5 DEM Geoid computation

The DEM ACE2 and GDEM V2 files provide the altitude with respect to its reference geoid. In the internal DEM computations, the altitude is transformed to altitude over the reference ellipsoid. To perform this

operation, a number of harmonics must be used, which can be configured with the following DEM configuration user tags (see [D_H_SUM]):

- Geoid_Computation tag: this field can take the values:
 - “Enabled”: geoid computation is performed.
 - “Disabled”: geoid computation is not performed.
- Geoid_Nof_Harmonics tag: the number of harmonics to be used in geoid computation.

If these fields are not provided, the default values are:

- Geoid_Computation: Enabled
- Geoid_Nof_Harmonics: 30

The computation precision increases with the number of harmonics (maximum is 360 harmonics) but the runtime performance gets worse. The computation of the geoid at runtime can be avoided by generating offline a DEM dataset storing altitudes w.r.t ellipsoid using `xp_gen_dem_altitudes_from_ellipsoid` function. In this case, when the DEM is used, the geoid computation shall be disabled in the DEM configuration file.

7.71.6 Calling Interface

The calling interface of the `xp_dem_init` CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long mode, model;
    char dem_file[XL_MAX_STR];
    xp_dem_id dem_id = {NULL};
    long ierr[XP_NUM_ERR_DEM_INIT], status;

    status = xp_dem_init(&mode, &model, &dem_file, &dem_id, ierr);
}
```

The `XP_NUM_ERR_DEM_INIT` constant is defined in the file `explorer_pointing.h`.

7.71.7 Input Parameters

The `xp_dem_init` CFI function has the following input parameters:

Table 175: Input parameters of `xp_dem_init` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|--------|---------------|---|---------------|---------------|
| mode | long * | - | Digital Elevation Model initialization mode. This parameter has no effect in current implementation (the DEM type is taken from configuration file), but a warning will be raised if the value does not coincide with the one in configuration file. | - | Complete |
| model | long * | - | Digital Elevation Model initialization model (dummy in current implementation) | - | Complete |
| dem_file | char[] | - | File used for DEM initialization (See DEM Configuration file in [D_H_SUM]) | - | Complete |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- DEM Initialization Mode: initialization mode (according to `XD_Dem_model_enum` in `[D_H_SUM]`)

7.71.8 Output Parameters

The output parameters of the `xp_dem_init` CFI function are:

Table 176: Output parameters of `xp_dem_init`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-------------------------|---------------|---|---------------|---------------|
| dem_id | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| ierr | long | - | Error vector | - | - |

7.71.9 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_dem_init` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_dem_init` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM])

Table 177: Error messages of xp_dem_init function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--|------------------------------------|----------|
| ERR | DEM Mode ID is not correct | No calculation performed | XP_CFI DEM INIT MODE_ID_ERR | 0 |
| ERR | DEM Model ID is not correct | No calculation performed | XP_CFI DEM INIT MODEL_ID_ERR | 1 |
| ERR | DEM initialization file could not be opened | No calculation performed | XP_CFI DEM INIT FILE_NO_T_OPEN_ERR | 2 |
| ERR | Unable to store DEM initialization file (not enough memory) | No calculation performed | XP_CFI DEM INIT MEMOR_Y_ERR | 3 |
| ERR | Error while reading DEM initialization file. In case of using a Generic Raster DEM, this error message is used also to indicate problems in 'dem_raster_configuration.xml'. | No calculation performed | XP_CFI DEM INIT FILE_READING_ERR | 4 |
| WARN | Default DEM values at Poles will be taken | Calculation performed. If required, default altitude values at the poles will be used. | XP_CFI DEM INIT FILE_READING_WARN | 5 |
| WARN | DEM file mode and input mode are not the same | No calculation performed | XP_CFI DEM INIT WRONG_MODEL_WARN | 6 |
| WARN | Input DEM configuration file version is deprecated | Calculation performed | XP_CFI DEM INIT DEPRECATE_D_WARN | 7 |
| WARN | DEM Cache Type not supplied, assuming FIFO_CACHE with maximum size of 2 GB | Calculation performed | XP_CFI DEM INIT CACHE_WARN | 8 |
| ERR | Error initializing TILE Database | No calculation | XP_CFI DEM INIT TILE_DB_ER | 9 |

| | | | | |
|------|---|--------------------------|---|----|
| | | performed | R | |
| ERR | Error computing altitude at the poles | No calculation performed | XP_CFI DEM INIT READ_POLE_S_ERR | 10 |
| WARN | DEM files at the poles not found. Default altitude will be used | Calculation performed | XP_CFI DEM INIT READ_POLE_S_WARN | 11 |
| WARN | Mini tile longitude size adjusted to %lf deg | Calculation performed | XP_CFI DEM INIT MINI_TILE_LON_SIZE_WARN | 12 |
| WARN | Mini tile latitude size adjusted to %lf deg | Calculation performed | XP_CFI DEM INIT MINI_TILE_LAT_SIZE_WARN | 13 |
| ERR | Error opening maximum altitude file %s | No calculation performed | XP_CFI DEM INIT OPEN_MAX_ALT_FILE_ERR | 14 |
| ERR | Error reading maximum altitude file %s | No calculation performed | XP_CFI DEM INIT READ_MAX_ALT_FILE_ERR | 15 |

7.72 xp_dem_close

7.72.1 Overview

The **xp_dem_close** CFI function cleans up any memory allocation performed by the **xp_dem_init** functions.

7.72.2 Calling Interface

The calling interface of the **xp_dem_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_dem_id dem_id = {NULL};
    long ierr[XP_NUM_ERRDEM_CLOSE], status;

    status = xp_dem_close(&dem_id, ierr);
}
```

The XP_NUM_ERRDEM_CLOSE constant is defined in the file *explorer_pointing.h*.

7.72.3 Input Parameters

The **xp_dem_close** CFI function has the following input parameters:

Table 178: Input parameters of xp_dem_close function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|------------|---------------|---|---------------|---------------|
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |

7.72.4 Output Parameters

The output parameters of the **xp_dem_close** CFI function are:

Table 179: Output parameters of xp_dem_close

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.72.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_dem_close** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_dem_close** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 180: Error messages of xp_dem_close function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|------------------------------|----------|
| ERR | Could not close the Dem. Id. as it is not initialized or it is being used | No calculation performed | XP_CFIDEM CLOSE_WRONG_ID_ERR | 0 |

7.73 xp_dem_compute

7.73.1 Overview

The **xp_dem_compute** CFI function compute the altitude over the see level for a point in the Earth. The altitude is calculated from the altitudes read from a digital elevation model (DEM).

7.73.2 Calling Interface

The calling interface of the **xp_dem_compute** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_model_id model_id = {NULL};
    xp_dem_id dem_id = {NULL};
    long ierr[XP_NUM_ERR_DEM_COMPUTE], status;
    double lon, lat, alt;
    status = xp_dem_compute(&model_id, &dem_id,
                           &lon, &lat,
                           &alt, ierr);
}
```

The **XP_NUM_ERR_DEM_COMPUTE** constant is defined in the file *explorer_pointing.h*.

7.73.3 Input Parameters

The **xp_dem_compute** CFI function has the following input parameters:

Table 181: Input parameters of xp_dem_compute function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|--------------|---------------|---|---------------|---------------|
| model_id | xl_model_id* | - | Model ID | - | - |
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |
| lon | double | - | Input longitude | degrees | [0, 360) |
| lat | double | - | Input latitude | degrees | [-90, 90] |

7.73.4 Output Parameters

The output parameters of the **xp_dem_compute** CFI function are:

Table 182: Output parameters of xp_dem_compute

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| alt | double | - | Altitude | meters | - |
| ierr | long | - | Error vector | - | - |

7.73.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_dem_compute** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_dem_compute** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 183: Error messages of xp_dem_compute function

| Error | Error message | Cause and impact | Error code | Error |
|-------|---------------|------------------|------------|-------|
|-------|---------------|------------------|------------|-------|

| type | | | | No |
|-------------|---|---|--|-----------|
| ERR | Error getting cell altitude | No calculation performed | XP_CFI DEM COMPUTE GET CELL ERR | 0 |
| ERR | Error allocating memory | No calculation performed | XP_CFI DEM COMPUTE ME MORY ERR | 1 |
| WARN | Void value detected. Altitude computation based on the ellipsoid. | Calculation performed. A message informs the user. | XP_CFI DEM COMPUTE VOI D VALUE DETECTED WARN | 2 |

7.74xp_dem_get_info

7.74.1 Overview

The **xp_dem_get_info** CFI function reads DEM information for a given geodetic point.

7.74.2 Calling Interface

The calling interface of the **xp_dem_get_info** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xl_model_id model_id = {NULL};
    xp_dem_id dem_id = {NULL};
    long ierr[XP_NUM_ERR_DEM_GET_INFO], status;
    double lon, lat;
    xp_dem_info dem_info
    status = xp_dem_get_info(&model_id, &dem_id,
                           &lon, &lat,
                           &dem_info,
                           &ierr);
}
```

The **XP_NUM_ERR_DEM_GET_INFO** constant is defined in the file *explorer_pointing.h*.

7.74.3 Input Parameters

The `xp_dem_get_info` CFI function has the following input parameters:

Table 184: Input parameters of `xp_dem_get_info` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|--------------|---------------|---|---------------|---------------|
| model_id | xl_model_id* | - | Model ID | - | - |
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |
| lon | double | - | Input longitude | degrees | [0, 360) |
| lat | double | - | Input latitude | degrees | [-90, 90] |

7.74.4 Output Parameters

The output parameters of the `xp_dem_get_info` CFI function are:

Table 185: Output parameters of `xp_dem_get_info`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------|-------------|---------------|--------------------------------------|---------------|---------------|
| dem_info | xp_dem_info | - | Structure containing DEM information | - | - |
| ierr | long | - | Error vector | - | - |

7.74.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_dem_get_info` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_dem_get_info` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 186: Error messages of xp_dem_get_info function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---|----------|
| ERR | DEM Id. is not initialized | No calculation performed | XP_CFI DEM GET_INFO_STATUS_ERR | 0 |
| ERR | Input longitude is out of allowed range [0, 360] | No calculation performed | XP_CFI DEM GET_INFO_WRONG_LONGITUDE_ERR | 1 |
| ERR | Input latitude is out of allowed range [90, -90] | No calculation performed | XP_CFI DEM GET_INFO_WRONG_LATITUDE_ERR | 2 |
| ERR | Could not open DEM file: %s | No calculation performed | XP_CFI DEM GET_INFO_OPEN_FILE_ERR | 3 |
| ERR | Could not read DEM file: %s | No calculation performed | XP_CFI DEM GET_INFO_READ_FILE_ERR | 4 |
| ERR | Could not read dem_raster_configuration.xml | No calculation performed | XP_DEM_GET_INFO_READ_RASTER_ERR | 5 |

7.75 xp_dem_get_id_data

7.75.1 Overview

The `xp_dem_get_id_data` CFI function returns DEM initialization data.

7.75.2 Calling interface

The calling interface of the `xp_dem_get_id_data` CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_dem_id dem_id;
    long status;
    xp_dem_id_data data;
    status = xp_dem_get_id_data (&dem_id, &data);
}
```

7.75.3 Input parameters

The `xp_dem_get_id_data` CFI function has the following input parameters:

Table 187: Input parameters of xp_dem_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-------------|---------------|---|---------------|---------------|
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |

7.75.4 Output parameters

The output parameters of the `xp_dem_get_id_data` CFI function are:

Table 188: Output parameters of xp_dem_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------|----------------|---------------|-------------------------|---------------|---------------|
| xp_dem_get_id_data | long | - | Status flag | - | - |
| data | xp_dem_id_data | - | DEM initialization data | - | - |

7.75.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The dem_id was not initialised.

7.76 xp_dem_id_configure

7.76.1 Overview

The **xp_dem_id_configure** CFI function performs configuration operations on DEM cache. The following operations can be performed:

- CLEAR CACHE: all the tiles in the cache are unloaded but cache memory is not freed.
- FREE CACHE: all the tiles in the cache are unloaded and cache memory is freed.
- SET MAXIMUM CACHE SIZE: this operation can only be performed for FIFO cache. A new maximum size for cache is set. If there are more tiles loaded in cache than new maximum size, the tiles are unloaded in a FIFO (First in- First out) order till new maximum size is reached.
- LOAD TILE SET: this operation can only be performed for PRELOAD cache. A set of tiles corresponding to an input rectangular longitude-latitude area is loaded in cache.

7.76.2 Calling Interface

The calling interface of the **xp_dem_id_configure** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_dem_id    dem_id    = {NULL};
    long ierr[XP_NUM_ERR_DEM_ID_CONFIGURE], status;
    xp_dem_id_config config;

    status = xp_dem_id_configure(&dem_id, &config,
                                ierr);
}
```

The **XP_NUM_ERR_DEM_ID_CONFIGURE** constant is defined in the file *explorer_pointing.h*.

7.76.3 Input Parameters

The `xp_dem_id_configure` CFI function has the following input parameters:

Table 189: Input parameters of `xp_dem_id_configure` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-------------------------------|---------------|---|---------------|---|
| dem_id | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| config | <code>xp_dem_id_config</code> | - | Input operation on cache | - | <ul style="list-style-type: none"> - Possible values for command field: XP_LOAD_TILE_SET XP_CLEAR_CACHE XP_FREE_CACHE XP_SET_MAX_SIZE - For rectangular area: 0. ≤ longitude ≤ 360. -90. ≤ latitude ≤ 90. |

7.76.4 Output Parameters

The output parameters of the `xp_dem_id_configure` CFI function are:

Table 190: Output parameters of `xp_dem_id_configure`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------------------|--------|---------------|-------------------------|---------------|---------------|
| <code>xp_dem_id_configure</code> | long | - | Status flag | - | - |
| ierr | long | - | Error vector | - | - |

7.76.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_dem_id_configure` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_dem_id_configure` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 191: Error messages of `xp_dem_id_configure` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---|----------|
| ERR | DEM id configured without cache | No calculation performed | XP_CFI DEM ID CONFIGURE_NO_CACHE_ERR | 0 |
| ERR | Wrong configuration command provided | No calculation performed | XP_CFI DEM ID CONFIGURE_WRONG_COMMAND_ERR | 1 |
| ERR | Error allocating memory | No calculation performed | XP_CFI DEM ID CONFIGURE_MEMORY_ERR | 2 |
| ERR | Error in input longitudes | No calculation performed | XP_CFI DEM ID CONFIGURE_LON_ERR | 3 |
| ERR | Error in input latitudes | No calculation performed | XP_CFI DEM ID CONFIGURE_LAT_ERR | 4 |
| ERR | Requested area needs more memory than maximum cache size | No calculation performed | XP_CFI DEM ID CONFIGURE_MAX_CACHE_ERR | 5 |
| ERR | Error loading tile | No calculation performed | XP_CFI DEM ID CONFIGURE_LOAD_TILE_ERR | 6 |
| ERR | Error locking thread | No calculation performed | XP_CFI DEM ID CONFIGURE_LOCK_THREAD_ERR | 7 |

7.77 xp_dem_get_cell_value

7.77.1 Overview

The **xp_dem_get_cell_value** CFI function retrieves the altitude value for the corresponding DEM and the given row and column.

The altitude value returned by the function is the value stored in the corresponding DEM file (without any processing of the value). Note that some DEM's can give this value as the altitude over the ellipsoid while others give the altitude over the geoid.

The row/column value refers to the number of row/column considering a DEM covering the whole Earth.

This way, row 0 corresponds to the first row in DEM that gives the altitudes at latitude 90deg south and the last row will contain the altitudes at latitude 90deg north.

The column 0 corresponds to the altitudes for longitude 0 deg while the last column refers to the altitudes at longitude 360 deg.

The total number of rows/columns can be get with the function **xp_dem_get_id_data** (the returned structure contains these numbers: **xp_dem_id_data.dem_metadata.n_rows** and **xp_dem_id_data.dem_metadata.n_cols**). Note that the total number of rows/columns of the DEM is related to the DEM resolution as follows:

number of rows = 180deg / (resolution along latitude axis)

number of columns = 360deg / (resolution along latitude axis)

For instance, a DEM with a resolution of 30 arcsecond:

number of rows = 180deg / (30/3600) = 21600

number of columns = 360deg / (30/3600) = 43200

7.77.2 Calling Interface

The calling interface of the **xp_dem_get_cell_value** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_dem_id dem_id = {NULL};
    long ierr[XP_NUM_ERR_DEM_GET_CELL_VALUE], status;
    long row;
    long column;
    double value;

    status = xp_dem_get_cell_value(&dem_id, row, column,
                                   &value, ierr);
}
```

The `XP_NUM_ERR_DEM_GET_CELL_VALUE` constant is defined in the file `explorer_pointing.h`.

7.77.3 Input Parameters

The `xp_dem_get_cell_value` CFI function has the following input parameters:

Table 192: Input parameters of `xp_dem_get_cell_value` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-------------------------|---------------|---|---------------|---|
| dem_id | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| row | long | - | DEM row number | - | .>=0 < total number of rows in DEM (see total number of rows/columns) |
| column | long | - | DEM column number | - | .>=0 < total number of columns in DEM (see total number of rows/columns) |

7.77.4 Output Parameters

The output parameters of the `xp_dem_get_cell_value` CFI function are:

Table 193: Output parameters of `xp_dem_get_cell_value`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|----------------------|---------------|-------------------------|---------------|---------------|
| value | <code>double*</code> | - | Altitude in DEM | m | - |
| ierr | <code>long*</code> | - | Error vector | - | - |

7.77.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_dem_get_cell_value` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_dem_get_cell_value` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 194: Error messages of xp_dem_get_cell_value function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|--|----------|
| ERR | Error reading DEM point from file: %s | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_READ_POINT_ERR | 0 |
| ERR | Requested row is out of DEM | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_WRONG_ABS_ROW_ERR | 1 |
| ERR | Requested column is out of DEM | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_WRONG_ABS_COL_ERR | 2 |
| ERR | Requested row is out of preloaded DEM | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_WRONG_ROW_ERR | 3 |
| ERR | Requested column is out of preloaded DEM | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_WRONG_COLUMN_ERR | 4 |
| ERR | Error computing the geoid undulation | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_GET_GEOID_UNDU_ERR | 5 |
| ERR | Error getting DEM value from cache | No calculation performed | XP_CFI_DEM_GET_CELL_VAL UE_READ_CACHE_POINT_E RR | 6 |

7.78 xp_dem_get_cell_geod

7.78.1 Overview

The **xp_dem_get_cell_geod** CFI function retrieves the geodetic point (latitude/longitude) for the corresponding DEM for the given row and column.

The row/column value refers to the number of row/column considering a DEM covering the whole Earth (see details in section 7.77.1)

7.78.2 Calling Interface

The calling interface of the **xp_dem_get_cell_geod** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_dem_id    dem_id    = {NULL};
    long ierr[XP_NUM_ERRDEM_GET_CELL_GEOD], status;
    long row;
    long column;
    double lat;
    double lon;

    status = xp_dem_get_cell_geod(&dem_id, row, column,
                                  &lat, &lon, ierr);
}
```

The **XP_NUM_ERRDEM_GET_CELL_GEOD** constant is defined in the file *explorer_pointing.h*.

7.78.3 Input Parameters

The **xp_dem_get_cell_geod** CFI function has the following input parameters:

Table 195: Input parameters of xp_dem_get_cell_geod function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|------------|---------------|---|---------------|---|
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |
| row | long | - | DEM row number | - | .>=0 < total number of rows in DEM (see total number of rows/columns) |
| column | long | - | DEM column number | - | .>=0 < total number of columns in DEM (see total number of rows/columns) |

7.78.4 Output Parameters

The output parameters of the **xp_dem_get_cell_geod** CFI function are:

Table 196: Output parameters of xp_dem_get_cell_geod

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|---------|---------------|---|---------------|---------------|
| lat | double* | - | Latitude corresponding to the input row/column | deg | [-90, 90] |
| lon | double* | - | Longitude corresponding to the input row/column | deg | [0, 360] |
| ierr | long* | - | Error vector | - | - |

7.78.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_dem_get_cell_geod** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_dem_get_cell_geod** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 197: Error messages of xp_dem_get_cell_geod function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------|--------------------------|---|----------|
| ERR | DEM Id. is not initialized | No calculation performed | XP_CFI DEM GET CELL GEOD DEM STATUS_ERR | 0 |

7.79 xp_target_inter

7.79.1 Overview

The **xp_target_inter** CFI function computes the first or the second intersection point of the line of sight from the satellite (defined by an elevation and an azimuth angle expressed in the selected Attitude Frame) with a surface located at a certain geodetic altitude over the Earth.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.79.2 Calling Interface

The calling interface of the **xp_target_inter** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv, inter_flag, iray;
    double los_az, los_el, geod_alt, los_az_rate, los_el_rate, freq;
    long ierr[XP_NUM_ERR_TARGET_INTER], status, num_user_target,
          num_los_target;

    status = xp_target_inter(&sat_id,
                           &attitude_id,
                           &atmos_id,
                           &dem_id,
                           &deriv, &inter_flag, &los_az, &los_el, &geod_alt,
                           &los_az_rate, &los_el_rate, &iray, &freq,
                           &num_user_target, &num_los_target,
                           &target_id, ierr);

    /* Or, using the run_id */
    long run_id;
```

```
status = xp_target_inter_run(&run_id,
    &attitude_id,
    &deriv, &inter_flag, &los_az, &los_el, &geod_alt,
    &los_az_rate, &los_el_rate, &iray, &freq,
    &num_user_target, &num_los_target,
    &target_id, ierr);

}
```

The XP_NUM_ERR_TARGET_INTER constant is defined in the file *explorer_pointing.h*.

7.79.3 Input Parameters

The `xp_target_inter` CFI function has the following input parameters:

Table 198: Input parameters of xp_target_inter function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|---|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | The atmos_id has to be initialized with any of these modes: - XP_NO_REF_INIT - XP_STD_INIT - XP_USER_INIT |
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| inter_flag | long * | - | Flag for first or second intersection point selection | - | Allowed values: (1) XP_INTER_1ST (2) XP_INTER_2ND |
| los_az | double * | - | Azimuth of the LOS (Attitude Frame) | deg | >= 0 < 360 |
| los_el | double * | - | Elevation of the LOS (Attitude Frame) | deg | >= -90 <= 90 |
| geod_alt | double * | - | Geodetic altitude over the Earth | m | >= -bWGS |
| los_az_rate | double * | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| los_el_rate | double * | - | Elevation-rate of the LOS (Attitude Frame) | deg/s | - |
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |

| | | | | | |
|------|----------|---|--|----|------|
| | | | If iray is different of XP_NO_REF_INIT, a warning is raised. | | |
| freq | double * | - | Frequency of the signal | Hz | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3.
- Intersection flag: inter_flag. See current document, Table 3 .
-

7.79.4 Output Parameters

The output parameters of the **xp_target_inter** CFI function are:

Table 199: Output parameters of xp_target_inter

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|---------------|---|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| ierr | long | - | Error vector | - | - |

7.79.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_inter** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_inter** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 200: Error messages of xp_target_inter function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_INTER_ATTITUDE_STATUS_ERR | 0 |

| | | | | |
|------|---|---|--|----|
| ERR | Intersection flag is not correct | No calculation performed | XP_CFI_TARGET_INTER_INTER_FLAG_ERR | 1 |
| ERR | Invalid Frequency | No calculation performed | XP_CFI_TARGET_INTER_FREQ_ERR | 2 |
| ERR | Time reference ID is not correct | No calculation performed | XP_CFI_TARGET_INTER_TIME_REF_ERR | 3 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_INTER_DERIV_FLAG_ERR | 4 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_TARGET_INTER_I_RAY_ID_ERR | 5 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_INTER_LOS_AZIMUTH_ERR | 6 |
| ERR | Invalid LOS Elevation | No calculation performed | XP_CFI_TARGET_INTER_LOS_ELEVATION_ERR | 7 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_INTER_GEODETEC_ALT_ERR | 8 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_INTER_MEMORY_ERR | 9 |
| ERR | Internal computation error # 3 | No calculation performed | XP_CFI_TARGET_INTER_INITIAL_LOOK_DIR_OR_P_LANE_ERR | 10 |
| ERR | Time Reference not initialised | No calculation performed | XP_CFI_TARGET_INTER_TIME_REF_INIT_ERR | 11 |
| ERR | No target was found | No calculation performed | XP_CFI_TARGET_INTER_TARGET_NOT_FOUND_ERR | 12 |
| ERR | Internal computation error # 4 | No calculation performed | XP_CFI_TARGET_INTER_RANGE_OR_POINTING_CALC_ERR | 13 |
| WARN | Path from satellite to target occulted by the Earth | Calculation performed. A message informs the user. | XP_CFI_TARGET_INTER_NEGATIVE_ALTITUDE_WARN | 14 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided. | XP_CFI_TARGET_INTER_IRAY_ID_WARN | 15 |

7.80 xp_target_ground_range

7.80.1 Overview

The **xp_target_ground_range** CFI function computes the location of a point that is placed on a surface at a certain geodetic altitude over the Earth, that lays on the plane defined by the satellite position, the nadir and a reference point, and that is at a certain distance or ground range measured along that surface from that reference point.

This reference point is calculated being the intersection of the previous surface with the line of sight defined by an elevation and azimuth angle in the selected Attitude Frame.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.80.2 Calling Interface

The calling interface of the **xp_target_ground_range** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    long deriv;
    double los_az, los_el, geod_alt, distance;
    double los_az_rate, los_el_rate;
    long ierr[XP_NUM_ERR_TARGET_GROUND_RANGE], status,
          num_user_target, num_los_target;

    status = xp_target_ground_range(&sat_id,
                                    &attitude_id,
                                    &dem_id,
                                    &deriv, &los_az,
                                    &los_el, &geod_alt, &distance, &los_az_rate,
                                    &los_el_rate, &num_user_target, &num_los_target,
                                    &target_id, ierr);

    /* Or, using the run_id */
}
```

```
long run_id;

status = xp_target_ground_range_run(&run_id,
    &latitude_id,
    &deriv, &los_az,
    &los_el, &geod_alt, &distance, &los_az_rate,
    &los_el_rate, &num_user_target, &num_los_target,
    &target_id, ierr);
}
```

The `XP_NUM_ERR_TARGET_GROUND_RANGE` constant is defined in the file `explorer_pointing.h`.

7.80.3 Input Parameters

The `xp_target_ground_range` CFI function has the following input parameters:

Table 201: Input parameters of xp_target_ground_range function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------|------------------------------|---------------|--|---------------|--|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>attitude_id</code> | <code>xp_attitude_id*</code> | - | Structure that contains the Attitude. (input/output) | - | - |
| <code>dem_id</code> | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| <code>los_az</code> | <code>double *</code> | - | Azimuth of the LOS (Attitude Frame) | deg | ≥ 0 < 360 |
| <code>los_el</code> | <code>double *</code> | - | Elevation of the LOS (Attitude Frame) | deg | ≥ -90 ≤ 90 |
| <code>geod_alt</code> | <code>double *</code> | - | Geodetic altitude over the Earth (Earth fixed CS) | m | $\geq -bWGS$ |
| <code>distance</code> | <code>double *</code> | - | Distance or ground range to the reference point, positive from nadir in the azimuth direction (Earth Fixed CS) | m | - |
| <code>los_az_rate</code> | <code>double *</code> | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| <code>los_el_rate</code> | <code>double *</code> | - | Elevation-rate of the LOS (Attitude Frame) | deg/s | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: `deriv`. See current document, Table 3.

7.80.4 Output Parameters

The output parameters of the `xp_target_ground_range` CFI function are:

Table 202: Output parameters of xp_target_ground_range

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.80.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_ground_range` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_ground_range` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 203: Error messages of xp_target_ground_range function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------------|--------------------------|--|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_GR_RANGE_ATTITUDE_STATUS_ERR | 0 |
| ERR | Time reference ID is not correct | No calculation performed | XP_CFI_TARGET_GR_RANGE_TIME_REF_ERR | 1 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_GR_RANGE_DERIV_FLAG_ERR | 2 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_GR_RANGE_LOS_AZIMUTH_ERR | 3 |
| ERR | Invalid LOS Elevation | No calculation performed | XP_CFI_TARGET_GR_RANGE_LOS_ELEVATION_ERR | 4 |

| ERR | Internal computation error #4 | No calculation performed | XP_CFI_TARGET_GR_RA NGE_RANGE_OR_POINTI NG_CALC_ERR | 10 |

7.81 xp_target_incidence_angle

7.81.1 Overview

The **xp_target_incidence_angle** CFI function computes the location of a point that is placed on a surface at a certain geodetic altitude over the Earth and that is seen from the satellite on a line of sight that forms a certain azimuth angle in the selected Attitude Frame and that intersects that surface with a certain incidence angle.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.81.2 Calling Interface

The calling interface of the **xp_target_incidence_angle** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id, deriv;
    xp_attitude_id attitude_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    double los_az, inc_angle, geod_alt, los_az_rate;
    long ierr[XP_NUM_ERR_TARGET_INCIDENCE_ANGLE], status,
          num_user_target, num_los_target;

    status = xp_target_incidence_angle(&sat_id,
                                       &attitude_id, &dem_id,
                                       &deriv, &los_az,
                                       &inc_angle, &geod_alt, &los_az_rate,
                                       &num_user_target, &num_los_target,
                                       &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_incidence_angle_run(&run_id, &attitude_id,
                                           &deriv, &los_az,
                                           &inc_angle, &geod_alt, &los_az_rate,
```

```
&num_user_target, &num_los_target,  
&target_id, ierr);  
}
```

The `XP_NUM_ERR_TARGET_INCIDENCE_ANGLE` constant is defined in the file `explorer_pointing.h`.

7.81.3 Input Parameters

The `xp_target_incidence_angle` CFI function has the following input parameters:

Table 204: Input parameters of `xp_target_incidence_angle` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|--|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| los_az | double * | - | Azimuth of the LOS (Attitude Frame) | deg | >= 0 < 360 |
| inc_angle | double * | - | Incidence angle of the LOS (Earth fixed CS) | deg | >= 0 <= 90 |
| geod_alt | double * | - | Geodetic altitude over the Earth (Earth fixed CS) | m | >= -bWGS |
| los_az_rate | double * | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.81.4 Output Parameters

The output parameters of the `xp_target_incidence_angle` CFI function are:

Table 205: Output parameters of xp_target_incidence_angle

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.81.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_incidence_angle` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_incidence_angle` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 206: Error messages of xp_target_incidence_angle function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_INC_ANGLE_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_INC_ANGLE_DERIV_FLAG_ERR | 1 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_INC_ANGLE_LOS_AZIMUTH_ERR | 2 |
| ERR | Invalid Incidence Angle | No calculation performed | XP_CFI_TARGET_INC_ANGLE_INC_ANGLE_ERR | 3 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_INC_ANGLE_GEOGRAPHIC_ALTITUDE_ERR | 4 |

7.82 xp_target_range

7.82.1 Overview

The **xp_target_range** CFI function computes the location of a point that is placed on a surface at a certain geodetic altitude over the Earth, that is seen from the satellite on a line of sight that forms a certain azimuth angle in the selected Attitude Frame, and that is at a certain range or slant-range from the satellite. If more than one target is found, the first one will be the one with an elevation closer to 90 degrees (targets will have the same azimuth, equal to input azimuth).

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.82.2 Calling Interface

The calling interface of the **xp_target_range** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_dem_id      dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    long deriv;
    double los_az, range, geod_alt, los_az_rate, range_rate;
    long ierr[XP_NUM_ERR_TARGET_RANGE], status, num_user_target,
           num_los_target;

    status = xp_target_range(&sat_id, &attitude_id, &dem_id,
                           &deriv, &los_az, &range,
                           &geod_alt, &los_az_rate, &range_rate,
                           &num_user_target, &num_los_target,
                           &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_range_run(&run_id, &attitude_id,
                               &deriv, &los_az, &range,
                               &geod_alt, &los_az_rate, &range_rate,
                               &num_user_target, &num_los_target,
```

```
&target_id, ierr);  
}
```

The XP_NUM_ERR_TARGET_RANGE constant is defined in the file *explorer_pointing.h*.

7.82.3 Input Parameters

The `xp_target_range` CFI function has the following input parameters:

Table 207: Input parameters of xp_target_range function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------|------------------------------|---------------|--|--------------------|--|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>attitude_id</code> | <code>xp_attitude_id*</code> | - | Structure that contains the Attitude. (input/output) | - | - |
| <code>dem_id</code> | <code>xp_dem_id *</code> | - | Structure that contains the DEM initialization. | - | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| <code>los_az</code> | <code>double *</code> | - | Azimuth of the LOS (Attitude Frame) | <code>deg</code> | ≥ 0 < 360 |
| <code>range</code> | <code>double *</code> | - | Range to the satellite (Earth fixed CS) | <code>m</code> | > 0 |
| <code>geod_alt</code> | <code>double *</code> | - | Geodetic altitude over the Earth | <code>m</code> | $\geq -bWGS$ |
| <code>los_az_rate</code> | <code>double *</code> | - | Azimuth-rate of the LOS (Attitude Frame) | <code>deg/s</code> | - |
| <code>range_rate</code> | <code>double *</code> | - | Range-rate to the satellite (Earth fixed CS) | <code>m/s</code> | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: `deriv`. See current document, Table 3 .

7.82.4 Output Parameters

The output parameters of the `xp_target_range` CFI function are:

Table 208: Output parameters of xp_target_range

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated (per user target) | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.82.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_range` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_range` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 209: Error messages of xp_target_range function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_RANGE_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_RANGE_DERIV_FLAG_ERR | 1 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_RANGE_LOS_AZIMUTH_ERR | 2 |
| ERR | Invalid Range | No calculation performed | XP_CFI_TARGET_RANGE_RANGE_ERR | 3 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_RANGE_GEOGRAPHIC_ALT_ERR | 4 |

| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_RANG E_MEMORY_ERR | 5 |
|-----|---|--------------------------|---|---|
| ERR | Internal computation error #3 | No calculation performed | XP_CFI_TARGET_RANG E_INITIAL_LOOK_DIR_O R_PLANE_ERR | 6 |
| ERR | Could not perform a time transformation | No calculation performed | XP_CFI_TARGET_RANG E_TIME_TRANSFORMAT ION_ERR | 7 |
| ERR | No target was found | No calculation performed | XP_CFI_TARGET_RANG E_TARGET_NOT_FOUND _ERR | 8 |

7.83 xp_target_range_rate

7.83.1 Overview

The **xp_target_range_rate** CFI function computes the location of a point that is placed on a surface at a certain geodetic altitude over the Earth, that is at a certain range from the satellite, and this range has a certain change rate (range_rate). Associated Earth-fixed target is supposed to have zero range-rate value.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.83.2 Calling Interface

The calling interface of the **xp_target_range_rate** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    long deriv;
    double ef_range_rate, range, geod_alt;
    double ef_range_rate_rate, range_rate;
    long ierr[XP_NUM_ERR_TARGET_RANGE_RATE], status, num_user_target,
           num_los_target;

    status = xp_target_range_rate(&sat_id,
                                  &attitude_id,
                                  &dem_id,
                                  &deriv, &ef_range_rate, &range,
                                  &geod_alt, &ef_range_rate_rate, &range_rate,
                                  &num_user_target, &num_los_target, &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_range_rate_run(&run_id,
                                      &attitude_id,
```

```
&deriv, &ef_range_rate, &range,  
&geod_alt, &ef_range_rate_rate, &range_rate,  
&num_user_target, &num_los_target, &target_id, ierr);  
}
```

The XP_NUM_ERR_TARGET_RANGE_RATE constant is defined in the file *explorer_pointing.h*.

7.83.3 Input Parameters

The **xp_target_range_rate** CFI function has the following input parameters:

Table 210: Input parameters of xp_target_range_rate function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------|-----------------|---------------|---|------------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| attitude_frame_id | long * | - | Attitude Frame ID | - | Complete |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| ef_range_rate | double * | - | Range-rate of the related Earth-fixed target. (Earth fixed CS) Dummy parameter. | m/s | - |
| range | double * | - | Range or slant-range from target to satellite (Earth fixed CS) | m | > 0 |
| geod_alt | double * | - | Geodetic altitude over the Earth | m | >= -bWGS |
| ef_range_rate_rate | double * | - | Range-rate-rate of the related Earth-fixed target (Earth fixed CS) Dummy parameter. | m/s ² | - |
| range_rate | double * | - | Range-rate from target to satellite (Earth fixed CS) Dummy parameter. | m/s | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.83.4 Output Parameters

The output parameters of the `xp_target_range_rate` CFI function are:

Table 211: Output parameters of xp_target_range_rate

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.83.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_range_rate` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_range_rate` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 212: Error messages of xp_target_range_rate function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|--|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_RANGE_RATE_ATTITUDE_STA TUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_RANGE_RATE_DERIV_FLAG_E RR | 1 |
| ERR | Invalid Range | No calculation performed | XP_CFI_TARGET_RANGE_RATE_RANGE_ERR | 2 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_RANGE_RATE_GEOGRAPHIC_ALT_ER R | 3 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_RANGE | 4 |

| | | | | |
|------|--|---|--|---|
| | | | E_RATE_MEMORY_ERR | |
| ERR | Time Reference not initialised | No calculation performed | XP_CFI_TARGET_RANG E_RATE_TIME_REF_INIT_ERR | 5 |
| ERR | Internal computation error #3 | No calculation performed | XP_CFI_TARGET_RANG E_RATE_INITIAL_LOOK_DIR_OR_PLANE_ERR | 6 |
| ERR | No target was found | No calculation performed | XP_CFI_TARGET_RANG E_RATE_TARGET_NOT_FOUND_ERR | 7 |
| WARN | Range rate algo only returns results without derivatives | Calculation performed. A message informs the user. | XP_CFI_TARGET_RANGE_RATE_DERIV_FLAG_WARN | 8 |

7.84 xp_target_tangent

7.84.1 Overview

The **xp_target_tangent** CFI function computes the location of the tangent point over the Earth that is located on the line of sight defined by an elevation and azimuth angles expressed in the selected Attitude Frame.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.84.2 Calling Interface

The calling interface of the **xp_target_tangent** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv,      iray;
    double los_az,  los_el,  los_az_rate, los_el_rate, freq;
    long ierr[XP_NUM_ERR_TARGET_TANGENT], status, num_user_target,
          num_los_target;

    status = xp_target_tangent(&sat_id, &attitude_id,
                               &atmos_id, &dem_id,
                               &deriv, &los_az, &los_el,
                               &los_az_rate, &los_el_rate, &iray, &freq,
                               &num_user_target, &num_los_target,
                               &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_tangent_run(&run_id, &attitude_id,
                                   &deriv, &los_az, &los_el,
```

```
&los_az_rate, &los_el_rate, &iray, &freq,  
&num_user_target, &num_los_target,  
&target_id, ierr);  
}
```

The XP_NUM_ERR_TARGET_TANGENT constant is defined in the file *explorer_pointing.h*.

7.84.3 Input Parameters

The **xp_target_tangent** CFI function has the following input parameters:

Table 213: Input parameters of xp_target_tangent function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|--|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | - |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| los_az | double * | - | Azimuth of the LOS (Attitude Frame) | deg | >= 0 < 360 |
| los_el | double * | - | Elevation of the LOS (Attitude Frame) | deg | >= -90 <= 90 |
| los_az_rate | double * | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| los_el_rate | double * | - | Elevation-rate of the LOS (Attitude Frame) | deg/s | - |
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.84.4 Output Parameters

The output parameters of the **xp_target_tangent** CFI function are:

Table 214: Output parameters of xp_target_tangent

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.84.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_tangent** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_tangent** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 215: Error messages of xp_target_tangent function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_TANGENT_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_TANGENT_DERIV_FLAG_ERR | 1 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_TANGENT_LOS_AZIMUTH_ERR | 2 |
| ERR | Invalid LOS Elevation | No calculation performed | XP_CFI_TARGET_TANGENT_LOS_ELEVATION_ERR | 3 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_TARGET_TANGENT_IRAY_ID_ERR | 4 |

| | | | | |
|------|--|--|---|----|
| ERR | Invalid Frequency | No calculation performed | XP_CFI_TARGET_TANGENT_FREQ_ERR | 5 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_TANGENT_MEMORY_ERR | 6 |

| WARN | Path from satellite to target occulted by the Earth | Calculation performed. A message informs the user. | XP_CFI_TARGET_TANGENT_NEGATIVE_ALTITUDE_WARN | 12 |
| WARN | Tangent point latitude is outside the selected corrective function latitude band | Calculation performed. A message informs the user. | XP_CFI_TARGET_TANGENT_PRED_WRONG_LAT_WARN, WARN | 13 |
| WARN | Tangent point is behind looking direction | Calculation performed. A message informs the user. | XP_CFI_TARGET_TANGENT_TG_PT_BEHIND_LOOK_DIR_WARN | 14 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided | XP_CFI_TARGET_TANGENT_I_RAY_ID_WARN | 15 |

7.85 xp_target_altitude

7.85.1 Overview

The **xp_target_altitude** CFI function computes the location of the tangent point over the Earth that is located on a surface at a certain geodetic altitude over the Earth and that is on a line of sight that forms a certain azimuth angle in the selected Attitude Frame.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.85.2 Calling Interface

The calling interface of the **xp_target_altitude** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv,      iray;
    double los_az,  geod_alt, los_az_rate, freq;
    long ierr[XP_NUM_ERR_TARGET_ALTITUDE], status, num_user_target,
          num_los_target;

    status = xp_target_altitude(sat_id, &attitude_id,
                               &atmos_id, &dem_id,
                               &deriv, &los_az, &geod_alt,
                               &los_az_rate, &iray, &freq,
                               num_user_target, num_los_target,
                               &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_altitude_run(run_id, &attitude_id,
                                   &deriv, &los_az, &geod_alt,
```

```
&los_az_rate, &iray, &freq,  
&num_user_target, &num_los_target,  
&target_id, ierr);  
}
```

The XP_NUM_ERR_TARGET_ALTITUDE constant is defined in the file *explorer_pointing.h*.

7.85.3 Input Parameters

The **xp_target_altitude** CFI function has the following input parameters:

Table 216: Input parameters of xp_target_altitude function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|---|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | - |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| los_az | double * | - | Azimuth of the LOS (Attitude Frame) | deg | >= 0 < 360 |
| geod_alt | double * | - | Geodetic altitude over the Earth | m | >= -bWGS |
| los_az_rate | double * | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.85.4 Output Parameters

The output parameters of the **xp_target_altitude** CFI function are:

Table 217: Output parameters of xp_target_altitude

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.85.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_altitude** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_altitude** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 218: Error messages of xp_target_altitude function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------------------|--------------------------|--------------------------------------|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_ALT_ATITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_ALT_DERIV_FLAG_ERR | 1 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_ALT_LOS_AZIMUTH_ERR | 2 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_ALT_GEODETIC_ALT_ERR | 3 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_TARGET_ALT_IRAY_ID_ERR | 4 |

| | | | | |
|------|--|---|---|----|

| ERR | Internal computation error #4 | No calculation performed | XP_CFI_TARGET_ALT_RANGE_OR_POINTING_CALC_ERR | 10 |
| WARN | Path from satellite to target occulted by the Earth | Calculation performed. A message informs the user. | XP_CFI_TARGET_ALT_NEGATIVE_ALTITUDE_WARN | 11 |
| WARN | Tangent point latitude is outside the selected corrective function latitude band | Calculation performed. A message informs the user. | XP_CFI_TARGET_ALT_PRED_WRONG_LAT_WARN | 12 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided. | XP_CFI_TARGET_ALT_IRAY_ID_WARN | 13 |

7.86 xp_target_star

7.86.1 Overview

The **xp_target_star** CFI function computes the location of the tangent point over the Earth that is located on the line of sight that points to a star defined by its right ascension and declination coordinates.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.86.2 Calling Interface

The calling interface of the **xp_target_star** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv, iray;
    double star_ra, star_dec, star_ra_rate, star_dec_rate, freq;
    long ierr[XP_NUM_ERR_TARGET_STAR], status, num_user_target,
          num_los_target;

    status = xp_target_star(&sat_id, &attitude_id,
                           &atmos_id, &dem_id,
                           &deriv, &star_ra, star_dec,
                           &star_ra_rate, &star_dec_rate, &iray, &freq,
                           &num_user_target, &num_los_target,
                           &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_star_run(&run_id, &attitude_id,
                               &deriv, &star_ra, star_dec,
                               &star_ra_rate, &star_dec_rate, &iray, &freq,
                               &num_user_target, &num_los_target,
```

```
&target_id, ierr);  
}
```

The XP_NUM_ERR_TARGET_STAR constant is defined in the file *explorer_pointing.h*.

7.86.3 Input Parameters

The `xp_target_star` CFI function has the following input parameters:

Table 219: Input parameters of xp_target_star function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|----------------------------|------------------------------|---------------|--|---------------|--|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>attitude_id</code> | <code>xp_attitude_id*</code> | - | Structure that contains the Attitude. (input/output) | - | - |
| <code>atmos_id</code> | <code>xp_atmos_id*</code> | - | Structure that contains the atmosphere initialization. | - | - |
| <code>dem_id</code> | <code>xp_dem_id *</code> | - | Structure that contains the DEM initialization. | - | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| <code>star_ra</code> | <code>double *</code> | - | Right ascension of the star (True of Date CS) | deg | ≥ 0 < 360 |
| <code>star_dec</code> | <code>double *</code> | - | Declination of the star (True of Date CS) | deg | ≥ -90 $\leq +90$ |
| <code>star_ra_rate</code> | <code>double *</code> | - | Right ascension rate of the star (True of Date CS) | deg/s | - |
| <code>star_dec_rate</code> | <code>double *</code> | - | Declination rate of the star (True of Date CS) | deg/s | - |
| <code>iray</code> | <code>long *</code> | - | Not used. The atmosphere refraction model can be defined via <code>atmos_id</code> initialization. | - | - |
| <code>freq</code> | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: `deriv`. See current document, Table 3 .

7.86.4 Output Parameters

The output parameters of the **xp_target_star** CFI function are:

Table 220: Output parameters of xp_target_star

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.86.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_star** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_star** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 221: Error messages of xp_target_star function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------------------|--------------------------|--|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_STAR_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_STAR_DERIV_FLAG_ERR | 1 |
| ERR | Invalid Right Ascension of the star | No calculation performed | XP_CFI_TARGET_STAR_RA_ERR | 2 |
| ERR | Invalid Declination of the star | No calculation performed | XP_CFI_TARGET_STAR_DEC_ERR | 3 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_TARGET_STAR_RAY_ID_ERR | 4 |

| | | | | |
|------|--|--|--|----|
| | | | | |
| ERR | Invalid Frequency | No calculation performed | XP_CFI_TARGET_STAR_F REQ_ERR | 5 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_STAR_ MEMORY_ERR | 6 |
| ERR | Internal computation error # 3 | No calculation performed | XP_CFI_TARGET_STAR_I NITIAL_LOOK_DIR_OR_P LANE_ERR | 7 |
| ERR | Time reference ID is not correct | No calculation performed | XP_CFI_TARGET_STAR_T IME_REF_INIT_ERR | 8 |
| ERR | No target was found | No calculation performed | XP_CFI_TARGET_STAR_T ARGET_NOT_FOUND_ER R | 9 |
| ERR | Tangent point is behind looking direction | No calculation performed | XP_CFI_TARGET_STAR_T G_PT_BEHIND_LOOK_DIR _ERR | 10 |
| ERR | Internal computation error # 4 | No calculation performed | XP_CFI_TARGET_STAR_R ANGE_OR_POINTING_CA LC_ERR | 11 |
| WARN | Path from satellite to target occulted by the Earth | Calculation performed. A message informs the user. | XP_CFI_TARGET_STAR_N EGATIVE_ALTITUDE_WA RN | 12 |
| WARN | Tangent point latitude is outside the selected corrective function latitude band | Calculation performed. A message informs the user. | XP_CFI_TARGET_STAR_P RED_WRONG_LAT_WAR N | 13 |
| WARN | Tangent point is behind looking direction | | XP_CFI_TARGET_STAR_TG PT_BEHIND_LOOK_DIR_WAR N | 14 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided | XP_CFI_TARGET_STAR_IRAY _ID_WARN | 15 |

7.87 xp_target_station

7.87.1 Overview

The **xp_target_station** CFI function computes the most relevant observation parameters of the link between the satellite and a ground station.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.87.2 Calling Interface

The calling interface of the **xp_target_station** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_dem_id      dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    long deriv;
    double geoc_long, geod_lat, geod_alt, min_link_el;
    long ierr[XP_NUM_ERR_TARGET_STATION], status, num_user_target,
           num_los_target;

    status = xp_target_station(&sat_id,
                               &attitude_id, &dem_id,
                               &deriv, &geoc_long, &geod_lat,
                               &geod_alt, &min_link_el,
                               &num_user_target, &num_los_target,
                               &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_station_run(&run_id,
                                   &attitude_id,
                                   &deriv, &geoc_long, &geod_lat,
                                   &geod_alt, &min_link_el,
```

```
&num_user_target, &num_los_target,  
&target_id, ierr);  
}
```

The XP_NUM_ERR_TARGET_STATION constant is defined in the file *explorer_pointing.h*.

7.87.3 Input Parameters

The **xp_target_station** CFI function has the following input parameters:

Table 222: Input parameters of xp_target_station function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|--|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| geoc_long | double * | - | GS geocentric longitude (Earth fixed CS) | deg | >= 0 < 360 |
| geod_lat | double * | - | GS geodetic latitude (Earth fixed CS) | deg | >= -90 < = 90 |
| geod_alt | double * | - | GS geodetic altitude (Earth fixed CS) | m | >= -bWGS |
| min_link_el | double * | - | GS minimum link elevation (Topocentric CS) | deg | >= -90 <= 90 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.87.4 Output Parameters

The output parameters of the **xp_target_station** CFI function are:

Table 223: Output parameters of xp_target_station

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---|---------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) | |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 | |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.87.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_station** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_station** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 224: Error messages of xp_target_station function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_STATION_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_STATION_DERIV_FLAG_ERR | 1 |
| ERR | Invalid GS Geocentric Longitude | No calculation performed | XP_CFI_TARGET_STATION_GEOC_LONG_ERR | 2 |
| ERR | Invalid GS Geodetic Latitude | No calculation performed | XP_CFI_TARGET_STATION_GEOD_LAT_ERR | 3 |
| ERR | Invalid GS Geodetic Altitude | No calculation performed | XP_CFI_TARGET_STATION_GEODETIC_ALT_ERR | 4 |

| ERR | Invalid GS Minimum Link Elevation | No calculation performed | XP_CFI_TARGET_STATISTICS_MIN_LINK_EL_ERR | 5 |
|-----|-----------------------------------|--------------------------|---|---|
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_STATISTICS_MEMORY_ERR | 6 |
| ERR | Internal computation error #3 | No calculation performed | XP_CFI_TARGET_STATISTICS_STAVIS_COMP_FAILED_ERR | 7 |

7.88 xp_target_generic

7.88.1 Overview

The **xp_target_generic** CFI function allows the user to provide the target location (position and velocity) and later calculate extra results from it.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.88.2 Calling Interface

The calling interface of the **xp_target_generic** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_dem_id      dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    long deriv;
    double targ_pos[3], targ_vel[3], targ_acc[3];
    long ierr[XP_NUM_ERR_TARGET_GENERIC], status, num_user_target,
          num_los_target;

    status = xp_target_generic(&sat_id,
                               &attitude_id,
                               &dem_id,
                               &deriv, targ_pos, targ_vel, targ_acc,
                               &num_user_target, &num_los_target,
                               &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_generic_run(&run_id,
                                   &attitude_id,
                                   &deriv, targ_pos, targ_vel, targ_acc,
                                   &num_user_target, &num_los_target,
```

```

        &target_id, ierr);
}

```

The `XP_NUM_ERR_TARGET_GENERIC` constant is defined in the file `explorer_pointing.h`.

7.88.3 Input Parameters

The `xp_target_generic` CFI function has the following input parameters:

Table 225: Input parameters of xp_target_generic function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------|------------------------------|---------------|--|------------------|---|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>attitude_id</code> | <code>xp_attitude_id*</code> | - | Structure that contains the Attitude. (input/output) | - | - |
| <code>dem_id</code> | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) <code>XP_NO_DER</code> (1) <code>XP_DER_1ST</code> (2) <code>XP_DER_2ND</code> |
| <code>targ_pos</code> | <code>double[3]</code> | [0-2] | Target position vector (Earth Fixed CS) | m | - |
| <code>targ_vel</code> | <code>double[3]</code> | [0-2] | Target velocity vector (Earth Fixed CS) | m/s | - |
| <code>targ_acc</code> | <code>double[3]</code> | [0-2] | Target acceleration vector (Earth Fixed CS) | m/s ² | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: `deriv`. See current document, Table 3 .

7.88.4 Output Parameters

The output parameters of the `xp_target_generic` CFI function are:

Table 226: Output parameters of xp_target_generic

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|--------------------|---------------|--------------------------------|---------------|------------------------|
| <code>num_user_t</code> | <code>long*</code> | - | Number of user defined targets | - | ≥ 0 (Set to 1 for |

| | | | | | |
|-----------------|---------------|---|--|---|----------------------------|
| arget | | | calculated | | non multi-target routines) |
| num_los_targets | long* | - | Number of LOS targets calculated | - | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| ierr | long | - | Error vector | - | - |

7.88.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_generic** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_generic** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 227: Error messages of xp_target_generic function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_GENERIC_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_GENERIC_DERIV_FLAG_ERR | 1 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_GENERIC_MEMORY_ERR | 2 |
| ERR | Internal computation error # 3 | No calculation performed | XP_CFI_TARGET_GENERIC_INITIAL_LOOK_DIR_OR_PLANE_ERR | 3 |

7.89 xp_target_reflected

7.89.1 Overview

The **xp_target_reflected** CFI function allows the user to compute, from S/C position and attitude, and emitting source position, the point of reflection from the source towards the SC at a certain geodetic altitude.

Note: in some limit configurations the function will return a degraded solution (returning also a warning of type `XP_CFI_TARGET_REFLECTED_DEGRADED_SOL_WARN`), where a maximum difference between the incidence angle and the reflected angle can be up to 5 milidegrees.

7.89.2 Calling Interface

The calling interface of the **xp_target_reflected** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id, deriv, source_type;
    long          status, num_user_target, num_los_target;
    xp_attitude_id attitude_id = {NULL};
    xp_target_id   target_id = {NULL};
    double         geod_alt, deflection_north, deflection_east,
    source_param[XP_NUM_SOURCE_PARAM];
    long          ierr[XP_NUM_ERR_TARGET_REFLECTED]

    status = xp_target_reflected( &sat_id, &attitude_id,
                                &deriv, &geod_alt,
                                &deflection_north, &deflection_east,
                                &source_type, source_param,
                                /* outputs */
                                &num_user_target, &num_los_target,
                                &target_id, ierr);

    /* Or, using the run_id */
    long run_id;
    status = xp_target_reflected_run( &run_id,
                                    &attitude_id, &deriv, &geod_alt,
                                    &deflection_north, &deflection_east,
                                    &source_type, source_param,
```

```

        /* outputs */
        &num_user_target, &num_los_target,
        &target_id, ierr);
}

```

The XP_NUM_ERR_TARGET_GENERIC constant is defined in the file *explorer_pointing.h*.

7.89.3 Input Parameters

The **xp_target_reflected** CFI function has the following input parameters:

Table 228: Input parameters of xp_target_reflected function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-----------------------------|---------------|---|---|---|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| geod_lat | double * | - | GS geodetic latitude (Earth fixed CS) | deg | >= -90 < = 90 |
| deflection_north | double * | - | North-South component of the vertical deflection | deg | >= -90 < = 90 |
| deflection_east | double * | - | East-West component of the vertical deflection | deg | >= -90 < = 90 |
| source_type | long * | - | The type of source | - | Allowed values: XP_SOURCE_STAR XP_SOURCE_SUN XP_SOURCE_MOON XP_SOURCE_GENERIC |
| source param | double[XP_NUM_SOURCE_PARAM] | [0-5] | <ul style="list-style-type: none"> if source_type is XP_SRC_STAR is selected, source_param = [ra (deg), dec (deg), paralax, 0.0, 0.0, 0.0], i.e. star coordinates in BM2000 CS. if source_type is XP_SOURCE_GENERIC | Right ascension and declination in degrees. Position vector in | - |

| | | | | | |
|--|--|--|--|-----------------------------------|--|
| | | | C source_param = [x, y, z, vx, vy, vz] position and velocity in EF • else dummy values. | meters, velocity in meters/second | |
|--|--|--|--|-----------------------------------|--|

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .
- Source Identification: source_type. See current document, Table 3 .

7.89.4 Output Parameters

The output parameters of the **xp_target_reflected** CFI function are:

Table 229: Output parameters of xp_target_reflected

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---------------|---|
| num_user_target | long* | - | Number of user defined targets calculated | - | | >= 0 (Set to 1 for non multi-target routines) |
| num_los_target | long* | - | Number of LOS targets calculated | - | | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | | - |
| ierr | long | - | Error vector | - | | - |

7.89.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_reflected** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_reflected** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 230: Error messages of xp_target_reflected function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------|--------------------------|-----------------------|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_REFLECT | 0 |

| | | | | |
|-----|---|--------------------------|--|----|
| | | | ED_ATTITUDE_STATUS_ER R | |
| ERR | Error when calling xp_target_star | No calculation performed | XP_CFI_TARGET_REFLECT ED_TARGET_STAR_ERR | 1 |
| ERR | Error when calling xp_target_tangent_sun | No calculation performed | XP_CFI_TARGET_REFLECT ED_TARGET_TG_SUN_ERR | 2 |

7.90 xp_target_travel_time

7.90.1 Overview

The **xp_target_travel_time** CFI function computes the point of the line or sight from the satellite (defined by an elevation and an azimuth angle expressed in the selected Attitude Frame) at a given travel time along the (curved) line of sight.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.90.2 Calling Interface

The calling interface of the **xp_target_travel_time** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv, iray;
    double los_az, los_el, travel_time
    double los_az_rate, los_el_rate, travel_time_rate, freq;
    long ierr[XP_NUM_ERR_TARGET_TRAVEL_TIME], status,
          num_user_target, num_los_target;

    status = xp_target_travel_time(&sat_id,
                                   &attitude_id,
                                   &atmos_id,
                                   &dem_id,
                                   &deriv, &los_az,
                                   &los_el, &travel_time, &los_az_rate, &los_el_rate,
                                   &travel_time_rate, &iray, &freq,
                                   num_user_target, num_los_target,
                                   &target_id, ierr);

    /* Or, using the run_id */
}
```

```
long run_id;

status = xp_target_travel_time_run(&run_id,
    &latitude_id,
    &deriv, &los_az,
    &los_el, &travel_time, &los_az_rate, &los_el_rate,
    &travel_time_rate, &iray, &freq,
    &num_user_target, &num_los_target,
    &target_id, ierr);
}
```

The `XP_NUM_ERR_TARGET_TRAVEL_TIME` constant is defined in the file `explorer_pointing.h`.

7.90.3 Input Parameters

The `xp_target_travel_time` CFI function has the following input parameters:

Table 231: Input parameters of xp_target_travel_time function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------------|------------------------------|---------------|---|---------------|--|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>attitude_id</code> | <code>xp_attitude_id*</code> | - | Structure that contains the Attitude. (input/output) | - | - |
| <code>atmos_id</code> | <code>xp_atmos_id*</code> | - | Structure that contains the atmosphere initialization. | - | The atmos_id has to be initialized with any of these modes: - XP_NO_REF_INIT - XP_STD_INIT - XP_USER_INIT |
| <code>dem_id</code> | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| <code>los_az</code> | <code>double *</code> | - | Azimuth of the LOS (Attitude Frame) | deg | ≥ 0 < 360 |
| <code>los_el</code> | <code>double *</code> | - | Elevation of the LOS (Attitude Frame) | deg | ≥ -90 ≤ 90 |
| <code>travel_time</code> | <code>double *</code> | - | Travel time along the (curved) line of sight | s | > 0 |
| <code>los_az_rate</code> | <code>double *</code> | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| <code>los_el_rate</code> | <code>double *</code> | - | Elevation-rate of the LOS (Attitude Frame) | deg/s | - |
| <code>travel_time_rate</code> | <code>double *</code> | - | Travel time-rate along the (curved) line of sight (currently not used) | s/s | - |
| <code>iray</code> | <code>long *</code> | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| <code>freq</code> | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.90.4 Output Parameters

The output parameters of the **xp_target_travel_time** CFI function are:

Table 232: Output parameters of xp_target_travel_time

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---------------|---|
| num_user_target | long* | - | Number of user defined targets calculated | - | | >= 0 (Set to 1 for non multi-target routines) |
| num_los_target | long* | - | Number of LOS targets calculated | - | | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | | - |
| ierr | long | - | Error vector | - | | - |

7.90.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_travel_time** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_travel_time** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 233: Error messages of xp_target_travel_time function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_ATTITUDE_STATUS_ERR | 0 |
| ERR | Intersection flag is not correct | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_INTER_FLAG_ERROR | 1 |
| ERR | Invalid Frequency | No calculation performed | XP_CFI_TARGET_TRAVEL | 2 |

| | | | | |
|------|---|--|---|----|
| | | | L_TIME_FREQ_ERR | |
| ERR | Time reference ID is not correct | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_REF_ERR | 3 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_DERIV_FLAG_ERR | 4 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_IRAY_ID_ERR | 5 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_LOS_AZIMUTH_ERR | 6 |
| ERR | Invalid LOS Elevation | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_LOS_ELEVATION_ERR | 7 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_GEODEUTIC_ALT_ERR | 8 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_MEMORY_ERR | 9 |
| ERR | Internal computation error # 3 | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_INITIAL_LOOK_DIR_OR_PLANE_ERR | 10 |
| ERR | Time Reference not initialised | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_TIME_REF_INIT_ERR | 11 |
| ERR | No target was found | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_TARGET_NOT_FOUND_ERR | 12 |
| ERR | Internal computation error # 4 | No calculation performed | XP_CFI_TARGET_TRAVEL_TIME_RANGE_OR_POINTING_CALC_ERR | 13 |
| WARN | Path from satellite to target occulted by the Earth | Calculation performed. A message informs the user. | XP_CFI_TARGET_TRAVEL_TIME_NEGATIVE_ALTITUDE_WARN | 14 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided | XP_CFI_TARGET_TRAVEL_TIME_IRAY_ID_WARN | 15 |

7.91 xp_target_tangent_sun

7.91.1 Overview

The **xp_target_tangent_sun** CFI function computes the location of the tangent point over the Earth that is located on the line of sight that points to the Sun.

Note: a correction can be applied in order to compensate the travel time of Sun light travel time. This correction is not applied with default model. To activate this correction, the Sun model in xl_model_id must be initialized with the enum XL_MODEL_SUN_TRAVEL_TIME using the function xl_model_init (see [LIB_SUM]).

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.91.2 Calling Interface

The calling interface of the **xp_target_tangent_sun** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv,      iray;
    double freq;
    long ierr[XP_NUM_ERR_TARGET_TANGENT_SUN], status,
          num_user_target, num_los_target;

    status = xp_target_tangent_sun(&sat_id,
                                  &attitude_id, &atmos_id, &dem_id,
                                  &deriv, &iray, &freq,
                                  &num_user_target, &num_los_target,
                                  &target_id, ierr);

    /* Or, using the run_id */
    long run_id;
```

```
status = xp_target_tangent_sun_run(&run_id,  
                                  &attitude_id,  
                                  &deriv, &iray, &freq,  
                                  &num_user_target, &num_los_target,  
                                  &target_id, ierr);  
}
```

The `XP_NUM_ERR_TARGET_TANGENT_SUN` constant is defined in the file `explorer_pointing.h`.

7.91.3 Input Parameters

The `xp_target_tangent_sun` CFI function has the following input parameters:

Table 234: Input parameters of `xp_target_tangent_sun` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-----------------|---------------|---|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | - |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.91.4 Output Parameters

The output parameters of the `xp_target_tangent_sun` CFI function are:

Table 235: Output parameters of `xp_target_tangent_sun`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|---------------|---|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |

| | | | | | |
|------|------|---|--------------|---|---|
| ierr | long | - | Error vector | - | - |
|------|------|---|--------------|---|---|

7.91.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_tangent_sun` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_tangent_sun` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 236: Error messages of xp_target_tangent_sun function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|--|----------|
| ERR | Attitude ID is not initialized | No calculation performed | XP_CFI_SUN_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_SUN_DERIV_FLAG_ERR | 1 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_SUN_IRAY_ID_ERR | 2 |
| ERR | Invalid Frequency | No calculation performed | XP_CFI_SUN_FREQ_ERR | 3 |
| ERR | Input state vector does not satisfy loose tolerance requirement | No calculation performed | XP_CFI_SUN_INVALID_STATE_VECTOR_ERR | 4 |
| ERR | Time Reference not initialised | No calculation performed | XP_CFI_SUN_TIME_REF_INITIALIZATION_ERR | 5 |
| ERR | Internal computation error # 1 | No calculation performed | XP_CFI_SUN_SUN_POSITION_CALC_ERR | 6 |
| ERR | Internal computation error # 2 | No calculation performed | XP_CFI_SUN_SUN_CS_CALC_ERR | 7 |
| ERR | Internal computation error # 3 | No calculation performed | XP_CFI_SUN_SUN_POINTING_CALC_ERR | 8 |
| ERR | Internal computation error # 4 | No calculation performed | XP_CFI_SUN_TARGET_STAR_ERR | 9 |
| ERR | Internal computation error # 5 | No calculation performed | XP_CFI_SUN_TG_PT_BEHIND_LOOK_DIR_ERR | 10 |

| | | | | |
|------|---|---|---------------------------------------|----|
| | | | | |
| WARN | Input state vector does not satisfy tight tolerance requirement | Calculation performed. A message informs the user. | XP_CFI_SUN_INVALID_SV_WARN | 11 |
| WARN | Tangent point is behind looking direction | Calculation performed. A message informs the user. | XP_CFI_SUN_TG_PT_BEHIND_LOOK_DIR_WARN | 12 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided. | XP_CFI_SUN_IRAY_ID_WARN | 13 |

7.92 xp_target_tangent_moon

7.92.1 Overview

The **xp_target_tangent_moon** CFI function computes the location of the tangent point over the Earth that is located on the line of sight that points to the Moon.

7.92.2 Calling Interface

The calling interface of the **xp_target_tangent_moon** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id   target_id = {NULL};
    long deriv,      iray;
    double freq;
    long ierr[XP_NUM_ERR_TARGET_TANGENT_MOON], status,
          num_user_target, num_los_target;

    status = xp_target_tangent_moon(&sat_id,
                                    &attitude_id, &atmos_id, &dem_id,
                                    &deriv, &iray, &freq,
                                    &num_user_target, &num_los_target,
                                    &target_id, ierr);

    /* Or, using the run_id */
    long run_id;

    status = xp_target_tangent_moon_run(&run_id,
                                         &attitude_id,
                                         &deriv, &iray, &freq,
                                         &num_user_target, &num_los_target,
                                         &target_id, ierr);
```

}

The `XP_NUM_ERR_TARGET_TANGENT_MOON` constant is defined in the file `explorer_pointing.h`.

7.92.3 Input Parameters

The `xp_target_tangent_moon` CFI function has the following input parameters:

Table 237: Input parameters of `xp_tangent_target_moon` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------|------------------------------|---------------|--|---------------|---|
| <code>sat_id</code> | <code>long *</code> | - | Satellite ID | - | Complete |
| <code>attitude_id</code> | <code>xp_attitude_id*</code> | - | Structure that contains the Attitude. (input/output) | - | - |
| <code>atmos_id</code> | <code>xp_atmos_id*</code> | - | Structure that contains the atmosphere initialization. | - | - |
| <code>dem_id</code> | <code>xp_dem_id*</code> | - | Structure that contains the DEM initialization. | - | - |
| <code>deriv</code> | <code>long *</code> | - | Derivative ID | - | Allowed values: (0) <code>XP_NO_DER</code> (1) <code>XP_DER_1ST</code> (2) <code>XP_DER_2ND</code> |
| <code>iray</code> | <code>long *</code> | - | Not used. The atmosphere refraction model can be defined via <code>atmos_id</code> initialization. | - | - |
| <code>freq</code> | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: `deriv`. See current document, Table 3 .

7.92.4 Output Parameters

The output parameters of the `xp_target_tangent_moon` CFI function are:

Table 238: Output parameters of `xp_tangent_target_moon`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------------------|--------------------|---------------|---|---------------|---|
| <code>num_user_target</code> | <code>long*</code> | - | Number of user defined targets calculated | - | ≥ 0 (Set to 1 for non multi-target routines) |

| | | | | | |
|-----------------|---------------|---|--|---|------|
| num_los_tar_get | long* | - | Number of LOS targets calculated | - | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| ierr | long | - | Error vector | - | - |

7.92.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_tangent_moon** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_tangent_moon** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 239: Error messages of xp_target_tangent_moon function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|-------------------------------------|----------|
| ERR | Attitude ID is not initialized | No calculation performed | XP_CFI_MOON_ATTITUD E_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_MOON_DERIV_FL AG_ERR | 1 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_MOON_IRAY_ID_ ERR | 2 |
| ERR | Invalid Frequency | No calculation performed | XP_CFI_MOON_FREQ_ER R | 3 |
| ERR | Input state vector does not satisfy loose tolerance requirement | No calculation performed | XP_CFI_MOON_INVALID_ SV_ERR | 4 |
| ERR | Time Reference not initialised | No calculation performed | XP_CFI_MOON_TIME_REF _INIT_ERR | 5 |
| ERR | Internal computation error #1 | No calculation performed | XP_CFI_MOON_MOON_P OSITION_CALC_ERR | 6 |
| ERR | Internal computation error #2 | No calculation performed | XP_CFI_MOON_MOON_CS _CALC_ERR | 7 |
| ERR | Internal computation error #3 | No calculation performed | XP_CFI_MOON_MOON_P OINTING_CALC_ERR | 8 |

| | | | | |
|------|---|---|---|----|
| ERR | Internal computation error #4 | No calculation performed | XP_CFI_MOON_TARGET_STAR_ERR | 9 |
| ERR | Internal computation error #5 | No calculation performed | XP_CFI_MOON_TG_PT_BE_HIND_LOOK_DIR_ERR | 10 |
| WARN | Input state vector does not satisfy tight tolerance requirement | Calculation performed. A message informs the user. | XP_CFI_MOON_INVALID_SV_WARN | 11 |
| WARN | Tangent point is behind looking direction | Calculation performed. A message informs the user. | XP_CFI_MOON_TG_PT_BE_HIND_LOOK_DIR_WARN | 12 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided. | XP_CFI_MOON_IRAY_ID_WARN | 13 |

7.93 xp_target_sc

7.93.1 Overview

The **xp_target_sc** CFI function computes the pointing from one satellite to another satellite.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.93.2 Calling Interface

The calling interface of the **xp_target_sc** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long sat_id1, sat_id2;
    xp_attitude_id attitude_id1 = {NULL};
    xp_attitude_id attitude_id2 = {NULL};
    xp_target_id target_id = {NULL};
    long deriv;
    long ierr[XP_NUM_ERR_TARGET_SC], status, num_user_target,
          num_los_target;

    status = xp_target_sc(&sat_id1, &attitude_id1,
                          &sat_id2, &attitude_id2,
                          &deriv,
                          &num_user_target, &num_los_target,
                          &target_id, ierr);
```

The XP_NUM_ERR_TARGET_SC constant is defined in the file *explorer_pointing.h*.

7.93.3 Input Parameters

The **xp_target_sc** CFI function has the following input parameters:

Table 240: Input parameters of xp_target_sc function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|-----------------|---------------|--|---------------|---------------|
| sat_id1 | long * | - | Satellite ID of source satellite | - | Complete |
| attitude_id1 | xp_attitude_id* | - | Structure that contains the Attitude (input/output) of | - | - |

| | | | | | |
|--------------|-----------------|---|---|---|--|
| | | | source satellite | | |
| sat_id2 | long * | - | Satellite ID of target satellite | - | Complete |
| attitude_id2 | xp_attitude_id* | - | Structure that contains the Attitude (input/output) of target satellite | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3.

7.93.4 Output Parameters

The output parameters of the `xp_target_sc` CFI function are:

Table 241: Output parameters of xp_target_sc

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|---------------|---|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 (Set to 1 for non multi-target routines) |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| ierr | long | - | Error vector | - | - |

7.93.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_sc` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_sc` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 242: Error messages of xp_target_sc function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|-------------------------------------|---------------------------|--|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_TARGET_SC_ATTITUDE_STATUS_ERR | 0 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_TARGET_SC_DERIV_FLAG_ERR | 1 |
| ERR | Error in call to xp_target_generic | No calculation performed | XP_CFI_TARGET_SC_TARGET_GENERIC_ERR | 2 |
| ERR | Error changing reference frame | No calculation performed. | XP_CFI_TARGET_SC_CHANGE_FRAME_ERR | 3 |
| ERR | Error computing pointing parameters | No calculation performed | XP_CFI_TARGET_SC_POINT_PARAM_COMPUTE_ERR | 4 |

7.94 xp_multi_target_inter

7.94.1 Overview

The **xp_multi_target_inter** CFI function computes the first or the second intersection points of the line of sight from the satellite (defined by an elevation and an azimuth angle expressed in the selected Attitude Frame) with surfaces located at certain geodetic altitudes over the Earth.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.94.2 Calling Interface

The calling interface of the **xp_multi_target_inter** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv, inter_flag, iray;
    double los_az, los_el, geod_alt[XP_MAX_NUM_MULTI_TARGET],
           los_az_rate, los_el_rate, freq;
    long ierr[XP_NUM_ERR_MULTI_TARGET], num_target, status
           num_user_target, num_los_target;

    status = xp_multi_target_inter(&sat_id,
                                   &attitude_id,
                                   &atmos_id,
                                   &dem_id,
                                   &deriv, &inter_flag, &los_az,
                                   &los_el, &num_target, geod_alt, &los_az_rate,
                                   &los_el_rate, &iray, &freq,
                                   num_user_target, num_los_target,
                                   &target_id, ierr);

    /* Or, using the run_id */
}
```

```
long run_id;

status = xp_multi_target_inter_run(&run_id,
    &latitude_id,
    &deriv, &inter_flag, &los_az,
    &los_el, &num_target, geod_alt, &los_az_rate,
    &los_el_rate, &iRAY, &freq,
    &num_user_target, &num_los_target,
    &target_id, ierr);
}
```

The `XP_NUM_ERR_MULTI_TARGET_INTER` constant is defined in the file `explorer_pointing.h`.

7.94.3 Input Parameters

The **xp_multi_target_inter** CFI function has the following input parameters:

Table 243: Input parameters of xp_multi_target_inter function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|-------------------------------------|---------------|--|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | The atmos_id has to be initialized with any of these modes: - XP_NO_REF_INIT - XP_STD_INIT - XP_USER_INIT |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| inter_flag | long * | - | Flag for first or second intersection point selection | - | Allowed values: (1) XP_INTER_1ST (2) XP_INTER_2ND |
| los_az | double * | - | Azimuth of the LOS (Attitude Frame) | deg | >= 0 < 360 |
| los_el | double * | - | Elevation of the LOS (Attitude Frame) | deg | >= -90 <= 90 |
| num_target | long * | - | Number of user defined altitudes | - | > 0 |
| geod_alt | double [XP_MAX_NUM_MUL TI_TARGET T] | - | Geodetic altitude over the Earth, sorted vector, strict monotonic decreasing | m | >= -bWGS |
| los_az_rate | double * | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| los_el_rate | double * | - | Elevation-rate of the LOS (Attitude Frame) | deg/s | - |

| | | | | | |
|------|----------|---|---|----|------|
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .
- Intersection flag: inter_flag. See current document, Table 3 .

7.94.4 Output Parameters

The output parameters of the `xp_multi_target_inter` CFI function are:

Table 244: Output parameters of xp_multi_target_inter

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|-------------|---------------|-----------------------|
| num_user_target | long* | | Number of user defined targets calculated | | | >= 0 <= num_target |
| num_los_target | long* | | Number of LOS targets calculated | | | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - | |
| ierr | long | - | Error vector | - | - | |

7.94.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_multi_target_inter` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_multi_target_inter` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 245: Error messages of xp_multi_target_inter function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|---|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_MULTI_TARGET_INTER_ATTITUDE_STATUS_ERR | 0 |
| ERR | Intersection flag is not correct | No calculation performed | XP_CFI_MULTI_TARGET_INTER_INTER_FLAG_ERR | 1 |
| ERR | Invalid Frequency | No calculation performed | XP_CFI_MULTI_TARGET_INTER_FREQ_ERR | 2 |
| ERR | Time reference ID is not correct | No calculation performed | XP_CFI_MULTI_TARGET_INTER_TIME_REF_ERR | 3 |
| ERR | Deriv flag is not correct | No calculation performed | XP_CFI_MULTI_TARGET_INTER_DERIV_FLAG_ERR | 4 |
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_MULTI_TARGET_INTER_IRAY_ID_ERR | 5 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_MULTI_TARGET_INTER_LOS_AZIMUTH_ERR | 6 |
| ERR | Invalid LOS Elevation | No calculation performed | XP_CFI_MULTI_TARGET_INTER_LOS_ELEVATION_ERR | 7 |

| | | | | |
|--|---------|---|-----------------|--|
| | ignored | A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided. | ER_IRAY_ID_WARN | |
|--|---------|---|-----------------|--|

7.95 xp_multi_target_travel_time

7.95.1 Overview

The **xp_multi_target_travel_time** CFI function computes the points of the line or sight from the satellite (defined by an elevation and an azimuth angle expressed in the selected Attitude Frame) at given travel times along the (curved) line of sight.

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.95.2 Calling Interface

The calling interface of the **xp_multi_target_travel_time** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv, iray;
    double los_az, los_el, travel_time[XP_MAX_NUM_MULTI_TARGET];
    double los_az_rate, los_el_rate, travel_time_rate, freq;
    long num_target, num_user_target, num_los_target;
    long ierr[XP_NUM_ERR_MULTI_TARGET_TRAVEL_TIME], status;

    status = xp_multi_target_travel_time(&sat_id,
                                         &attitude_id,
                                         &atmos_id,
                                         &dem_id,
                                         &deriv, &los_az, &los_el,
                                         &num_target, travel_time, &los_az_rate,
                                         &los_el_rate, &travel_time_rate, &iray, &freq,
                                         &num_user_target, &num_los_target,
                                         &target_id, ierr);

    /* Or, using the run_id */
}
```

```
long run_id;

status = xp_multi_target_travel_time_run(&run_id,
                                          &latitude_id,
                                          &deriv, &los_az, &los_el,
                                          &num_target, travel_time, &los_az_rate,
                                          &los_el_rate, &travel_time_rate, &iray, &freq,
                                          &num_user_target, &num_los_target,
                                          &target_id, ierr);
}
```

The `XP_NUM_ERR_MULTI_TARGET_TRAVEL_TIME` constant is defined in the file `explorer_pointing.h`.

7.95.3 Input Parameters

The **xp_multi_target_travel_time** CFI function has the following input parameters:

Table 246: Input parameters of xp_multi_target_travel_time function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|-------------------------------------|---------------|--|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | The atmos_id has to be initialized with any of these modes: - XP_NO_REF_INIT - XP_STD_INIT - XP_USER_INIT |
| dem_id | xp_dem_id * | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| los_az | double * | - | Azimuth of the LOS (Attitude Frame) | deg | >= 0 < 360 |
| los_el | double * | - | Elevation of the LOS (Attitude Frame) | deg | >= -90 <= 90 |
| num_target | long * | - | Number of user defined times | - | > 0 |
| travel_time | double [XP_MAX_NUM_MUL TI_TARGET T] | - | Travel time along the (curved) line of sight, sorted vector, strict monotonic increasing | s | > 0 |
| los_az_rate | double * | - | Azimuth-rate of the LOS (Attitude Frame) | deg/s | - |
| los_el_rate | double * | - | Elevation-rate of the LOS (Attitude Frame) | deg/s | - |
| travel_time_rate | double * | - | Travel time-rate along the (curved) line of sight. Constant number (currently not used). | s/s | - |

| | | | | | |
|------|----------|---|---|----|----------|
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3 .

7.95.4 Output Parameters

The output parameters of the `xp_multi_target_travel_time` CFI function are:

Table 247: Output parameters of xp_multi_target_travel_time

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------|---------------|--|---------------|-----------------------|
| num_user_target | long* | - | Number of user defined targets calculated | - | >= 0 =< num_target |
| num_los_target | long* | - | Number of LOS targets calculated | - | >= 0 |
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| ierr | long | - | Error vector | - | - |

7.95.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_multi_target_travel_time` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_multi_target_travel_time` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 248: Error messages of xp_multi_target_travel_time function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------------|--------------------------|---|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | XP_CFI_MULTI_TARGET_TRAVEL_TIME_ATTITUDE_STATUS_ERR | 0 |
| ERR | Intersection flag is not correct | No calculation performed | XP_CFI_MULTI_TARGET_TRAVEL_TIME_INTERFLAG_ERR | 1 |

| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided. | XP_MULTI_TARGET_TRAVEL_TIME_IRAY_ID_WARN | 17 |

7.96 xp_target_list_inter

7.96.1 Overview

The **xp_target_list_inter** CFI function computes the first or the second intersection point of the line of sight from the satellite (expressed as pairs of azimuth and elevation angles in the selected Attitude Frame) with a surface located at a certain geodetic altitude over the Earth.

The sets of azimuth and elevation points can be defined in 3 different ways:

- A list of azimuth and elevation pairs.
- A strip of lines of sight, with a fixed azimuth and elevation angles changing with a given step.
- A grid of lines of sight, with both azimuth and elevation angles changing with a given step.

For each pair a user target is computed. To obtain the extra values for all the targets, the functions **xp_target_list_extra_xxx** can be used. The position of the target in the output array of these extra functions has the following criterion (note also that **xp_target_extra_xxx** functions can also be used to obtain the results of only one target with the same index criterion, but **xp_target_list_extra_xxx** are optimized to obtain the results for all the targets):

- 1) In case of a list, the index of the list.
- 2) In case of a strip: being n_{el} the number of elevation values (note that minimum and maximum elevation values are always included in the list):

$$n_{el} = \text{TRUNC}((\text{max_elevation}-\text{min_elevation})/\text{step_elevation}+1)$$

The target number is computed in increasing elevation order, from lower to upper elevation:

- For $0 \leq i < n_{el}-1$: target number i corresponds to pair (azimuth, $\text{min_elevation} + i*\text{step_elevation}$).
- For $i = n_{el}-1$: target number $n_{el}-1$ corresponds to pair (azimuth, max_elevation).

- 3) In case of a grid: being n_{el} the number of elevation values (note that minimum and maximum elevation values are always included in the list):

$$n_{el} = \text{TRUNC}((\text{max_elevation}-\text{min_elevation})/\text{step_elevation}+1)$$

being n_{az} the number of azimuth values (note that minimum and maximum azimuth values are always included in the list):

$$n_{az} = \text{TRUNC}((\text{max_azimuth}-\text{min_azimuth})/\text{step_azimuth}+1)$$

The target number is computed by increasing azimuth and elevation order: from minimum azimuth to maximum azimuth and, for every azimuth value, from minimum elevation to maximum elevation. That is:

- For $0 \leq i < n_{el}-1$: target number i corresponds to pair ($\text{min_azimuth}, \text{min_elevation} + i*\text{step_elevation}$).
- For $i = n_{el}-1$: target number $n_{el}-1$ corresponds to pair ($\text{min_azimuth}, \text{max_elevation}$).
- For $n_{el} \leq i < 2*n_{el}-1$ target number i corresponds to pair ($\text{min_azimuth} + i*\text{step_azimuth}, \text{min_elevation} + i*\text{step_elevation}$).

...
 (for $0 \leq j < n_{az}-1$ and defining $k = i-j*n_{el}$)

- For $j*n_{el} \leq i < (j+1)*n_{el}-1$ target number i corresponds to pair ($\min_azimuth + j*step_azimuth$, $\min_elevation + k*step_elevation$).
- For $i = (j+1)*n_{el}-1$ target number i corresponds to pair ($\min_azimuth + j*step_azimuth$, $\max_elevation$).

(for $j = n_{az}-1$ and defining $k=i-(n_{az}-1)*n_{el}$)

- For $(n_{az}-1)*n_{el} \leq i < n_{az}*n_{el}-1$: target number i corresponds to pair ($\max_azimuth$, $\min_elevation + k*step_elevation$).
- For $i = n_{az}*n_{el}-1$ target number i corresponds to pair ($\max_azimuth$, $\max_elevation$).

The light travel time (from the satellite to the target or vice versa) can be taken into account by the computations. For details about light propagation mode see the section 4.1.2.3.

7.96.2 Calling Interface

The calling interface of the `xp_target_list_inter` CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long          sat_id;
    xp_attitude_id attitude_id = {NULL};
    xp_atmos_id   atmos_id = {NULL};
    xp_dem_id     dem_id = {NULL};
    xp_target_id  target_id = {NULL};
    long deriv, inter_flag;
    xp_instrument_data instrument_data;
    double geod_alt;
    long ierr[XP_NUM_ERR_TARGET_LIST_INTER], status;
    xp_target_output target_out;

    status = xp_target_list_inter(&sat_id,
                                &attitude_id,
                                &atmos_id,
                                &dem_id,
                                &deriv, &inter_flag,
```

```

        &instrument_data, &geod_alt,
        &target_out,
        &target_id, ierr);
}

```

The XP_NUM_ERR_TARGET_INTER constant is defined in the file *explorer_pointing.h*.

7.96.3 Input Parameters

The xp_target_list_inter CFI function has the following input parameters:

Table 249: Input parameters of xp_target_lists_inter function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|--------------------|---------------|--|---------------|--|
| sat_id | long * | - | Satellite ID | - | Complete |
| attitude_id | xp_attitude_id* | - | Structure that contains the Attitude. (input/output) | - | - |
| atmos_id | xp_atmos_id* | - | Structure that contains the atmosphere initialization. | - | The atmos_id has to be initialized with any of these modes: - XP_NO_REF_INIT - XP_STD_INIT - XP_USER_INIT |
| dem_id | xp_dem_id* | - | Structure that contains the DEM initialization. | - | - |
| deriv | long * | - | Derivative ID | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| inter_flag | long * | - | Flag for first or second intersection point selection | - | Allowed values: (1) XP_INTER_1ST (2) XP_INTER_2ND |
| instrument_data | xp_instrument_data | - | Azimuth/elevation input data and frequency | deg | 0 ≤ azimuth < 360 -90 ≤ elevation <= 90 |
| geod_alt | double * | - | Geodetic altitude over the Earth | m | >= -bWGS |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Derivative switch: deriv. See current document, Table 3.
- Intersection flag: inter_flag. See current document, Table 3 .

- Azimuth elevation input type. See current document, Table 3 .

7.96.4 Output Parameters

The output parameters of the `xp_target_list_inter` CFI function are:

Table 250: Output parameters of xp_target_list_inter

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------|---------------------------------|---------------|--|---------------|---------------|
| target_out | <code>xp_target_ou tput*</code> | - | Number of user and LOS defined targets calculated. Note: the memory allocated in this struct must be freed by the user | - | ≥ 0 |
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| ierr | long | - | Error vector | - | - |

7.96.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_inter` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_inter` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 251: Error messages of xp_target_list_inter function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------------|--------------------------|--|----------|
| ERR | Attitude Id. is not initialized | No calculation performed | <code>XP_CFI_TARGET_LIST_INTE R_ATTITUDE_STATUS_ERR</code> | 0 |
| ERR | Intersection flag is not correct | No calculation performed | <code>XP_CFI_TARGET_LIST_INTE R_INTER_FLAG_ERR</code> | 1 |
| ERR | Invalid Frequency | No calculation performed | <code>XP_CFI_TARGET_LIST_INTE R_FREQ_ERR</code> | 2 |
| ERR | Time reference ID is not correct | No calculation performed | <code>XP_CFI_TARGET_LIST_INTE R_TIME_REF_ERR</code> | 3 |
| ERR | Deriv flag is not correct | No calculation performed | <code>XP_CFI_TARGET_LIST_INTE R_DERIV_FLAG_ERR</code> | 4 |

| | | | | |
|------|---|---|--|----|
| ERR | Ray Tracing Model ID is not correct | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_I_RAY_ID_ERR | 5 |
| ERR | Invalid LOS Azimuth | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_LOS_AZIMUTH_ERR | 6 |
| ERR | Invalid LOS Elevation | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_LOS_ELEVATION_ERR | 7 |
| ERR | Invalid Geodetic Altitude | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_GEODETIC_ALT_ERR | 8 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_MEMORY_ERR | 9 |
| ERR | Internal computation error # 3 | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_INITIAL_LOOK_DIR_OR_P_LANE_ERR | 10 |
| ERR | Time Reference not initialized | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_TIME_REF_INIT_ERR | 11 |
| ERR | No target was found | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_TARGET_NOT_FOUND_ERR | 12 |
| ERR | Internal computation error # 4 | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_RANGE_OR_POINTING_C_ALC_ERR | 13 |
| WARN | Path from satellite to target occulted by the Earth | Calculation performed. A message informs the user. | XP_CFI_TARGET_LIST_INTE_R_NEGATIVE_ALTITUDE_WARN | 14 |
| ERR | Wrong instrument data type | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_INSTRUMENT_TYPE_ERR | 15 |
| ERR | Error linking IDs | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_LINK_IDS_ERR | 16 |
| ERR | Maximum number of targets exceeded | No calculation performed | XP_CFI_TARGET_LIST_INTE_R_MAX_TARGETS_ERR | 17 |

7.97 xp_target_extra_vector

7.97.1 Overview

The **xp_target_extra_vector** CFI function provides the following output parameters for the target(s) in input data structure.: target position, velocity and acceleration vectors, line of sight direction, range, travel time and their corresponding derivatives.

Note on target_number with targets computed with xp_target_list_inter or xp_target_range:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by xp_target_get_id_data.

7.97.2 Calling Interface

The calling interface of the **xp_target_extra_vector** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    xp_target_id    target_id = {NULL};
    double vector_results[XP_SIZE_TARGET_RESULT_VECTOR],
           vector_results_rate[XP_SIZE_TARGET_RESULT_VECTOR],
           vector_results_rate_rate[XP_SIZE_TARGET_RESULT_VECTOR];
    long ierr[XP_NUM_ERR_TARGET_EXTRA_VECTOR], status;

    status = xp_target_extra_vector (&target_id, &choice,
                                    &target_type, &target_number,
                                    vector_results,
                                    vector_results_rate,
                                    vector_results_rate_rate, ierr);
}
```

The XP_SIZE_TARGET_RESULT_VECTOR and XP_NUM_ERR_TARGET_EXTRA_VECTOR constants aredefined in the file *explorer_pointing.h*.

7.97.3 Input Parameters

The **xp_target_extra_vector** CFI function has the following input parameters:

Table 252: Input parameters of xp_target_extra_vector function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|---------------|---------------|--|---------------|---|
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| choice | long * | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | long * | | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| target_number | long * | - | Target number | | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.97.4 Output Parameters

The output parameters of the `xp_target_extra_vector` CFI function are:

Table 253: Output parameters of xp_target_extra_vector

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|--|--------------------------------------|---------------|---|------------------|---------------|---------------|
| vector_results double[XP_SIZE_TARG ET_RESULT_VECTOR] | [0] | | Target Position X (Earth-Fixed) | m | | |
| | [1] | | Target Position Y (Earth-Fixed) | m | | |
| | [2] | | Target Position Z (Earth-Fixed) | m | | |
| | [3] | | Direction LOS X (Earth-Fixed) | - | | |
| | [4] | | Direction LOS Y (Earth-Fixed) | - | | |
| | [5] | | Direction LOS Z (Earth-Fixed) | - | | |
| | [6] | | Range to Attitude Frame Origin | m | | |
| | [7] | | Travel Time to Attitude Frame Origin | s | | |
| | [8] | | Target time UTC | days | | |
| vector_results_rate double[XP_SIZE_TARG ET_RESULT_VECTOR] | [9:XP_SIZE_TARG ET_RESULT_VECTOR] | (dummy) | | - | - | |
| | [0] | | Target Velocity X (Earth-Fixed) | m/s | | |
| | [1] | | Target Velocity Y (Earth-Fixed) | m/s | | |
| | [2] | | Target Velocity Z (Earth-Fixed) | m/s | | |
| | [3] | | Direction Rate LOS X (Earth-Fixed) | 1/s | | |
| | [4] | | Direction Rate LOS Y (Earth-Fixed) | 1/s | | |
| | [5] | | Direction Rate LOS Z (Earth-Fixed) | 1/s | | |
| | [6] | | Range Rate to Attitude Frame Origin | m/s | | |
| | [7] | | Travel Time Rate to Attitude Frame Origin | s/s | | |
| vector_results_rate_rate double[XP_SIZE_TARG ET_RESULT_VECTOR] | [8] | Dummy | | | | |
| | [9:XP_SIZE_TARG ET_RESULT_VECTOR] | (dummy) | | - | - | |
| | [0] | | Target Acceleration X (Earth-Fixed) | m/s ² | | |
| | [1] | | Target Acceleration Y (Earth-Fixed) | m/s ² | | |
| | [2] | | Target Acceleration Z (Earth-Fixed) | m/s ² | | |
| | [3] | | Direction Rate Rate LOS X (Earth-) | 1/s ² | | |

| | | | | |
|------|--|--|--------------|---|
| | | Fixed) | | |
| [4] | | Direction Rate Rate LOS Y (Earth-Fixed) | 1/s2 | |
| [5] | | Direction Rate Rate LOS Z (Earth-Fixed) | 1/s2 | |
| [6] | | Range Rate Rate to Attitude Frame Origin | m/s2 | |
| [7] | | Travel Time Rate Rate to Attitude Frame Origin | s/s2 | |
| [8] | | Dummy | | |
| | [9:XP_SIZ E_TARGE T_RESUL T_VECTO R] | (dummy) | - | - |
| ierr | long | - | Error vector | - |

Note that:

- first derivative parameters (vector_results_rate) are returned as zeros if derivative flag (deriv) was set to NO_DER when the target was computed and that second derivative parameters (vector_results_rate_rate) are returned as zeros if derivative flag (deriv) was set to NO_DER or 1ST_DER.
- when a refraction mode is selected, the second derivative parameters (vector_results_rate_rate) are returned as zeros.
- when light propagation mode is used the target position is at **target time** (see section 4.1.2.3).

7.97.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_extra_vector** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_extra_vector** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 254: Error messages of xp_target_extra_vector function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|------------------------|--------------------------|-----------------------|----------|
| ERR | The Target ID does not | No calculation performed | XP_CFI_TARGET_EXTRA_V | 0 |

| | | | | |
|------|--|--|---|----|
| | contain any data | | ECTOR_NO_DATA_ERR | |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_V ECTOR_NO_SUCH_USER_T ARGET_ERR | 1 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_V ECTOR_NO_SUCH_LOS_TA RGET_ERR | 2 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_V ECTOR_NO_SUCH_EARTH_ TARGET_ERR | 3 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_EXTRA_V ECTOR_EARTH_TARGET_C OMPUT_ERR | 4 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_EXTRA_V ECTOR_WRONG_TARGET_T YPE_ERR | 5 |
| ERR | Wrong deriv input flag | No calculation performed | XP_CFI_TARGET_EXTRA_V ECTOR_DERIV_FLAG_ERR | 6 |
| WARN | 1st. Derivatives are not available | Calculation performed. A message informs the user. | XP_CFI_TARGET_EXTRA_V ECTOR_DER_1ST_NOT_AVA IL_WARN | 7 |
| WARN | 2nd. Derivatives are not available | Calculation performed. A message informs the user. | XP_CFI_TARGET_EXTRA_V ECTOR_DER_2ND_NOT_AV AIL_WARN | 8 |
| WARN | DEM files were not found | Calculation performed. | XP_CFI_TARGET_EXTRA_VECT OR_ELLIPSOID_WARN | 9 |
| WARN | Warning in XP_DEM_inter | Calculation performed. | XP_CFI_TARGET_EXTRA_VECT OR_DEM_INTER_WARN | 10 |
| ERR | Error converting time to UTC | No calculation performed | XP_CFI_TARGET_EXTRA_VECT OR_CONVERT_TO_UTC_ERR | 11 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_EXTRA_VECT OR_DEM_DEGRADED_SOLUTI ON_WARN | 12 |

7.98 xp_target_list_extra_vector

7.98.1 Overview

The **xp_target_list_extra_vector** CFI function provides the same results as **xp_target_extra_vector** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

7.98.1.1 Note on multithreading:

Improvement in performance due to multithread parallelization depends on many factors, including hardware set-up (i.e. multicore processor) and number of targets computed. In some cases (e.g. low number of targets), due to the high overhead of starting threads, parallelization may even degrade performances. In this case, it is recommended to disable multithreading or reduce the number of threads by using `omp_set_num_threads` openmp function.

NOTE for MACIN64 platform, Xcode 5 users:

As of version 5, llvm-gcc has been removed from Xcode and the default compiler is clang.

clang can build an application linking against the EOCFI C / C++ libraries.

However openmp is not supported by clang. Therefore, the `-fopenmp` shall not be used.

Functions using parallelized computations, e.g. **xp_target_list...** functions will work in single-thread mode.

7.98.2 Calling Interface

The calling interface of the **xp_target_list_extra_vector** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    xp_target_id target_id = {NULL};
    xp_target_extra_vector_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_VECTOR], status;

    status = xp_target_list_extra_vector (&target_id, &choice,
                                         &target_type,
                                         &list, ierr);
}
```

The `XP_NUM_ERR_TARGET_LIST_EXTRA_VECTOR` constant is defined in the file *explorer_pointing.h*.

7.98.3 Input Parameters

The `xp_target_list_extra_vector` CFI function has the following input parameters:

Table 255: Input parameters of xp_target_list_extra_vector function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|----------------------------|---------------|--|---------------|---|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | <code>long *</code> | | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.98.4 Output Parameters

The output parameters of the `xp_target_list_extra_vector` CFI function are:

Table 256: Output parameters of xp_target_list_extra_vector

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--|---------------|-------------------------|---------------|---------------|
| list | <code>xp_target_extra_vector_results_list</code> | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of `xp_target_extra_vector` (see 7.97.4).

7.98.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_extra_vector` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_extra_vector` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 257: Error messages of xp_target_list_extra_vector function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---|----------|
| ERR | The Target ID does not contain any data | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_VECTOR_NO_DATA_ERR</code> | 0 |
| ERR | The target does not exist | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_VECTOR_NO_SUCH_USER_TARGET_ERR</code> | 1 |
| ERR | The target does not exist | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_VECTOR_NO_SUCH_EARTH_TARGET_ERR</code> | 2 |
| ERR | Could not compute the DEM target | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_VECTOR_EARTH_TARGET_COMPUT_ERR</code> | 3 |
| ERR | Wrong target type | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_VECTOR_WRONG_TARGET_TYPE_ERR</code> | 4 |

| | | | | |
|------|--|---|---|----|
| ERR | Wrong deriv input flag | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_VECTOR_DERIV_FLAG_ERR | 5 |
| WARN | 1st. Derivatives are not available | Calculation performed. A message informs the user. | XP_CFI_TARGET_LIST_EXTRA_VECTOR_DER_1ST_NOT_AVAIL_WARN | 6 |
| WARN | 2nd. Derivatives are not available | Calculation performed. A message informs the user. | XP_CFI_TARGET_LIST_EXTRA_VECTOR_DER_2ND_NOT_AVAIL_WARN | 7 |
| WARN | DEM files were not found | Calculation performed. | XP_CFI_TARGET_LIST_EXTRA_VECTOR_ELLIPSOID_WARN | 8 |
| WARN | Warning in XP_DEM_inter | Calculation performed. | XP_CFI_TARGET_LIST_EXTRA_VECTOR_DEM_INTER_WARN | 9 |
| ERR | Error allocating memory | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_VECTOR_MEMORY_ERR | 10 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_VECTOR_DEM_DEGRADED_SOLUTION_WARN | 11 |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_VECTOR_DEM_VOID_VALUE_DETECTED_ERR | 12 |

7.99 xp_target_extra_main

7.99.1 Overview

The **xp_target_extra_main** CFI function computes the extra parameter for the target(s) in input data structure.

Note on target_number with targets computed with xp_target_list_inter or xp_target_range:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by xp_target_get_id_data.

7.99.2 Calling Interface

The calling interface of the **xp_target_extra_main** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    double main_results[XP_SIZE_TARGET_RESULT_MAIN],
           main_results_rate[XP_SIZE_TARGET_RESULT_MAIN],
           main_results_rate_rate[XP_SIZE_TARGET_RESULT_MAIN];
    xp_target_id    target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_EXTRA_MAIN], status;

    status = xp_target_extra_main (&target_id, &choice, &target_type,
                                  &target_number,
                                  main_results, main_results_rate,
                                  main_results_rate_rate, ierr);
}
```

The XP_SIZE_TARGET_EXTRA_MAIN and XP_NUM_ERR_TARGET_RESULT_MAIN constants are defined in the file *explorer_pointing.h*.

7.99.3 Input Parameters

The **xp_target_extra_main** CFI function has the following input parameters:

Table 258: Input parameters of xp_target_extra_main function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|---------------|---------------|--|---------------|---|
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| choice | long * | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Complete |
| target_type | long * | | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| target_number | long * | - | Target number | | >= 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.99.4 Output Parameters

The output parameters of the `xp_target_extra_main` CFI function are:

Table 259: Output parameters of xp_target_extra_main

| C name | C type | Array Element | Description | (Reference) | Unit (Format) | Allowed Range |
|--|----------------------------------|---------------|--|-------------|------------------|---------------|
| main_results | [0] | | Target geocentric longitude (Earth Fixed CS) | deg | >= 0 < 360 | |
| double[XP_SIZE_TARG ET_RESULT_MAIN] | [1] | | Target geocentric latitude (Earth Fixed CS) | deg | >= -90 <= +90 | |
| | [2] | | Target geodetic latitude (Earth Fixed CS) | deg | >= -90 <= +90 | |
| | [3] | | Target geodetic altitude (Earth Fixed CS) | m | - | |
| | [4] | | Satellite to target azimuth (Topocentric CS) | deg | >= 0 < 360 | |
| | [5] | | Satellite to target elevation (Topocentric CS) | deg | >= -90 <= +90 | |
| | [6] | | Satellite to target pointing: Azimuth (attitude frame) | deg | >= 0 < 360 | |
| | [7] | | Satellite to target pointing: Elevation (attitude frame) | deg | >= -90 <= +90 | |
| | [8] | | Target to satellite pointing: Azimuth (Topocentric) | deg | >= 0 < 360 | |
| | [9] | | Target to satellite pointing: Elevation (Topocentric) | deg | >= -90 <= +90 | |
| | [10] | | Target to source Satellite Pointing: Azimuth (attitude frame). Note: this value is only meaningful when target has been computed with <code>xp_target_sc</code> | deg | >= 0 < 360 | |
| | [11] | | Target to source Satellite Pointing: Elevation (attitude frame) Note: this value is only meaningful when target has been computed with <code>xp_target_sc</code> | deg | >= -90 <= 90 | |
| | [12:XP_SI ZE_TARG ET_RESU] | | (dummy) | - | - | |

| | | | | |
|--|---|--|--------|---|
| | LT_MAIN] | | | |
| main_results_rate double[XP_SIZE_TARG ET_RESULT_MAIN] | [0] | Target geocentric longitude rate (Earth Fixed CS) | deg/s | - |
| | [1] | Target geocentric latitude rate (Earth Fixed CS) | deg/s | - |

| ierr | long | - | Error vector |

Note that first derivative parameters (vector_results_rate) are returned as zeros if derivative flag (deriv) was set to NO_DER when the target was computed and that second derivative parameters (vector_results_rate_rate) are returned as zeros if derivative flag (deriv) was set to NO_DER or 1ST_DER.

Note also that when a refraction mode is selected, the second derivative parameters (vector_results_rate_rate) are returned as zeros.

7.99.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_extra_main` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_extra_main` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 260: Error messages of xp_target_extra_main function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_EXTRA_M AIN_NO_DATA_ERR | 0 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_M AIN_NO_SUCH_USER_TARG ET_ERR | 1 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_M AIN_NO_SUCH_LOS_TARGE T_ERR | 2 |

7.100 xp_target_list_extra_main

7.100.1 Overview

The **xp_target_list_extra_main** CFI function provides the same results as **xp_target_extra_main** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

See note on mutithreading in section 7.98.1.1.

7.100.2 Calling Interface

The calling interface of the **xp_target_list_extra_main** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    xp_target_id target_id = {NULL};
    xp_target_extra_main_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_MAIN], status;

    status = xp_target_list_extra_main (&target_id, &choice,
                                       &target_type,
                                       &list, ierr);
}
```

The **XP_NUM_ERR_TARGET_LIST_EXTRA_MAIN** constant is defined in the file *explorer_pointing.h*.

7.100.3 Input Parameters

The `xp_target_list_extra_main` CFI function has the following input parameters:

Table 261: Input parameters of xp_target_list_extra_main function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|----------------------------|---------------|--|---------------|--|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Complete |
| target_type | <code>long *</code> | | Flag to select the type of target | | <code>XP_USER_TARGET_TYPE</code> <code>XP_LOS_TARGET_TYPE</code> <code>XP_DEM_TARGET_TYPE</code> |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.100.4 Output Parameters

The output parameters of the `xp_target_list_extra_main` CFI function are:

Table 262: Output parameters of xp_target_list_extra_main

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--|---------------|-------------------------|---------------|---------------|
| list | <code>xp_target_extra_main_results_list</code> | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of `xp_target_extra_main` (see section 7.99.4).

7.100.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_extra_main` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_extra_main` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 263: Error messages of xp_target_list_extra_main function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---|----------|
| ERR | No target data available | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_MAIN_NO_DATA_ERR</code> | 0 |
| ERR | Invalid time reference in target data | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_MAIN_INVALID_TIME_REF_ERR</code> | 1 |
| ERR | Error calling to XL_Car_Geo CFI function | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_MAIN_CAR_TO_GEO_ERR</code> | 2 |
| ERR | Error getting transformation matrix to Topocentric CS | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_MAIN_TOPO_ERR</code> | 3 |
| ERR | Error getting direction angles | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_MAIN_DIR_POINTING_ERR</code> | 4 |
| ERR | Error while changing coordinate system | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_MAIN_CS_CHANGE_ERR</code> | 5 |

| | | | | |
|------|---|---|---|----|
| | | | | |
| WARN | Warning: Derivatives cannot be calculated | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_DERIV_WARN | 6 |
| WARN | Warning calling to XL_Car_Geo CFI function | Calculation performed, but derivatives will not be computed | XP_CFI_TARGET_LIST_EXTRA_MAIN_AMBIGUOUS_SINGULAR_WARN | 7 |
| ERR | Error allocating memory | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_MEMORY_ERR | 8 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_NO SUCH EARTH_TARGET_ERR | 9 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_EARTH_TARGET_COMPUT_ERR | 10 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_ELLIPSOID_WARN | 11 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_DEM_INTER_WARN | 12 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_WRONG_TARGET_TYPE_ERR | 13 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_DEM_DEGRADED SOLUTION_WARN | 14 |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_MAIN_DEM_VOID_VALUE_DETECTED_ERR | 15 |

7.101 xp_target_extra_aux

7.101.1 Overview

The `xp_target_extra_aux` CFI function computes auxiliary parameters for the target in input data structure.

Note on target_number with targets computed with `xp_target_list_inter` or `xp_target_range`:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by `xp_target_get_id_data`.

7.101.2 Calling Interface

The calling interface of the `xp_target_extra_aux` CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    double aux_results[XP_SIZE_TARGET_RESULT_AUX],
           aux_results_rate[XP_SIZE_TARGET_RESULT_AUX],
           aux_results_rate_rate[XP_SIZE_TARGET_RESULT_AUX];
    xp_target_id    target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_EXTRA_AUX], status;

    status = xp_target_extra_aux(&target_id, &choice, &target_type,
                                &target_number,
                                aux_results, aux_results_rate,
                                aux_results_rate_rate, ierr);
}
```

The `XP_SIZE_TARGET_RESULT_AUX` and `XP_NUM_ERR_TARGET_EXTRA_AUX` constants are defined in the file `explorer_pointing.h`.

7.101.3 Input Parameters

The `xp_target_extra_aux` CFI function has the following input parameters:

Table 264: Input parameters of xp_target_extra_aux

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|----------------------------|---------------|--|---------------|--|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Complete |
| target_type | <code>long *</code> | | Flag to select the type of target | | <code>XP_USER_TARGET_TYPE</code> <code>XP_LOS_TARGET_TYPE</code> <code>XP_DEM_TARGET_TYPE</code> |
| target_number | <code>long *</code> | - | Target number | | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.101.4 Output Parameters

The output parameters of the `xp_target_extra_aux` CFI function are:

Table 265: Output parameters of xp_target_extra_aux

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------------------|-------------------------------|---------------|---|---------------|----------------------|
| aux_results | [0] | | Radius of curvature in the look direction at the nadir of the target (Earth fixed CS) | m | ≥ 0 |
| double[XP_SIZE_TARGET_RESULT_AUX] | [1] | | Distance from the nadir of the target to the satellite nadir. (Earth fixed CS) | m | ≥ 0 |
| | [2] | | Minimum distance from the nadir of the target to the ground track (Earth Fixed CS). It is regarded as positive distance when the nadir of the target is located on the left hand side of the ground track. | m | - |
| | [3] | | Distance from the SSP to the point located on the ground track that is at a minimum distance from the nadir of the target (Earth fixed CS) It is regarded as positive distance when that point is located on the ground track ahead the SSP (in the direction of the motion of the SSP) | m | - |
| | [4] | | Mean Local Solar Time at target. | decimal hour | ≥ 0 < 24 |
| | [5] | | True Local Solar Time at target. | decimal hour | ≥ 0 < 24 |
| | [6] | | Right ascension at which the look direction from the satellite to the target points at target point. (True of Date CS) | deg | ≥ 0 < 360 |
| | [7] | | Declination at which the look direction from the satellite to the target points at target point. (True of Date CS) | deg | ≥ -90 < 90 |
| | [8:XP_SIZE_TARGET_RESULT_AUX] | (dummy) | | - | - |
| aux_results_rate | [0] | | Radius of curvature-rate in the look direction at the nadir of the target (Earth fixed CS) | m/s | - |

| | | | | | |
|--------------------------------------|---|--|---|---------------|------|
| double[XP_SIZE_TARG T_RESULT_AUX] | | | | | |
| | [1] | Distance-rate from the nadir of the target to the satellite nadir. (Earth fixed CS) | m | >= 0 | |
| | [2] | Distance-rate from the nadir of the target to the ground track (Earth fixed CS) | m/s | - | |
| | [3] | Distance-rate from the SSP to the point located on the ground track that is at a minimum distance from the nadir of the target (Earth fixed CS) | | | |
| | [4:7] | (dummy) | - | - | |
| | [8] | Northward component of the velocity relative to the Earth of the nadir of the target (Topocentric CS) | m/s | - | |
| | [9] | Eastward component of the velocity relative to the Earth of the nadir of the target (Topocentric CS) | m/s | - | |
| | [10] | Azimuth of the velocity relative to the Earth of the nadir of the target. (Topocentric CS) | deg | >= 0 < 360 | |
| | [11] | Magnitude of the velocity relative to the Earth of the nadir of the target. (Topocentric CS) | m/s | >= 0 | |
| | [12:XP_SI ZE_TARG ET_RESU LT_AUX] | (dummy) | - | - | |
| aux_results_ rate_rate | double[XP_SI ZE_TARG ET_RESU LT_AUX] | [0] | Radius of curvature-rate-rate in the look direction at the nadir of the target (Earth fixed CS) | m/s | - |
| | | [1] | Distance-rate-rate from the nadir of the target to the satellite nadir. (Earth fixed CS) | m | >= 0 |
| | | [2] | Distance-rate-rate from the nadir of the target to the ground track (Earth fixed CS) | m/s | - |
| | | [3] | Distance-rate-rate from the SSP to the point located on the ground track that is at a minimum distance from the nadir of the target (Earth fixed CS) | | |

| | | | | | |
|------|------|---|--------------|---|---|
| | | [4:XP_SIZ (dummy) E_TARGE T_RESUL T_AUX] | | - | - |
| ierr | long | - | Error vector | - | - |

7.101.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_extra_aux` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_extra_aux` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 266: Error messages of xp_target_extra_aux function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|---------------------------|--|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_EXTRA_A UX_NO_DATA_ERR | 0 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_A UX_NO SUCH_USER_TARG ET_ERR | 1 |
| ERR | The target does not exist | No calculation performed. | XP_CFI_TARGET_EXTRA_A UX_NO SUCH_LOS_TARGE T_ERR | 2 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_A UX_NO SUCH_EARTH_TAR GET_ERR | 3 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_EXTRA_A UX_EARTH_TARGET_COMP UT_ERR | 4 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_EXTRA_A UX_WRONG_TARGET_TYPE _ERR | 5 |
| ERR | Invalid time reference in target data | No calculation performed | XP_CFI_TARGET_EXTRA_A UX_INVALID_TIME_REF_ER R | 6 |

7.102 xp_target_list_extra_aux

7.102.1 Overview

The **xp_target_list_extra_aux** CFI function provides the same results as **xp_target_extra_aux** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

See note on mutithreading in section 7.98.1.1.

7.102.2 Calling Interface

The calling interface of the **xp_target_list_extra_aux** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    xp_target_id target_id = {NULL};
    xp_target_extra_aux_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_AUX], status;

    status = xp_target_list_extra_aux (&target_id, &choice,
                                       &target_type,
                                       &list, ierr);
}
```

The **XP_NUM_ERR_TARGET_LIST_EXTRA_AUX** constant is defined in the file *explorer_pointing.h*.

7.102.3 Input Parameters

The `xp_target_list_extra_aux` CFI function has the following input parameters:

Table 267: Input parameters of `xp_target_list_extra_aux` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|----------------------------|---------------|--|---------------|--|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Complete |
| target_type | <code>long *</code> | | Flag to select the type of target | | <code>XP_USER_TARGET_TYPE</code> <code>XP_LOS_TARGET_TYPE</code> <code>XP_DEM_TARGET_TYPE</code> |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.102.4 Output Parameters

The output parameters of the `xp_target_list_extra_aux` CFI function are:

Table 268: Output parameters of xp_target_list_extra_aux

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|---|---------------|-------------------------|---------------|---------------|
| list | <code>xp_target_extra_aux_results_list</code> | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of `xp_target_extra_aux` (see section 7.101.4).

7.102.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_extra_aux` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_extra_aux` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 269: Error messages of xp_target_list_extra_aux function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---------------------------------------|--------------------------|---|----------|
| ERR | No target data available | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_AUX_NO_DATA_ERR</code> | 0 |
| ERR | The target does not exist | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_AUX_NO_SUCH_EARTH_TAR GET_ERR</code> | 1 |

7.103 xp_target_extra_ef_target

7.103.1 Overview

The **xp_target_extra_ef_target** CFI function computes the parameter for an Earth fixed target related to the target in input data structure.

Note on target_number with targets computed with xp_target_list_inter or xp_target_range:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by xp_target_get_id_data.

7.103.2 Calling Interface

The calling interface of the **xp_target_extra_ef_target** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long target_type, target_number, choice;
    double freq;
    double ef_target_results_rate[XP_SIZE_EF_TARGET_RESULT],
    ef_target_results_rate_rate[XP_SIZE_EF_TARGET_RESULT];
    xp_target_id target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_EXTRA_EF_TARGET], status;

    status = xp_target_extra_ef_target(&target_id, &choice,
                                       &target_type, &target_number, &freq,
                                       ef_target_results_rate,
                                       ef_target_results_rate_rate, ierr);
}
```

The XP_SIZE_TARGET_RESULT_EF_TARGET and XP_NUM_ERR_TARGET_EXTRA_EF_TARGET constants are defined in the file *explorer_pointing.h*.

7.103.3 Input Parameters

The `xp_target_extra_ef_target` CFI function has the following input parameters:

Table 270: Input parameters of xp_target_extra_ef_target function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|----------------------------|---------------|--|---------------|---|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) <code>XP_NO_DER</code> (1) <code>XP_DER_1ST</code> (2) <code>XP_DER_2ND</code> |
| target_type | <code>long *</code> | | Flag to select the type of target | | <code>XP_USER_TARGET_TYPE</code> <code>XP_LOS_TARGET_TYPE</code> <code>XP_DEM_TARGET_TYPE</code> |
| target_number | <code>long *</code> | - | Target number | | ≥ 0 |
| freq | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.103.4 Output Parameters

The output parameters of the `xp_target_extra_ef_target` CFI function are:

Table 271: Output parameters of `xp_target_extra_ef_target`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------------|-----------------------------------|---------------|--|---------------|---------------|
| ef_target_results_rate | double [XP_SIZE_EF_TARGET_RESULT] | [0] | 2-way Doppler shift of the signal (Earth Fixed CS) | Hz | - |
| | | [1] | Earthfixed target to satellite range-rate. (Earth Fixed CS) | m/s | - |
| | | [2] | Earthfixed target to satellite azimuth-rate. (Topocentric CS) | deg/s | - |
| | | [3] | Earthfixed target to satellite elevation-rate. (Topocentric CS) | deg/s | - |
| | | [4] | Satellite to earthfixed target azimuth-rate. (Topocentric CS) | deg/s | - |
| | | [5] | Satellite to earthfixed target elevation-rate. (Topocentric CS) | deg/s | - |
| | | [6] | Satellite to earthfixed target azimuth-rate. (Attitude Frame) | deg/s | - |
| | | [7] | Satellite to earthfixed target elevation-rate. (Attitude Frame) | deg/s | - |
| ef_target_results_rate_rate | double [XP_SIZE_EF_TARGET_RESULT] | [0] | (dummy) | - | - |
| | | [1] | Earthfixed target to satellite range-rate-rate. (Earth Fixed CS) | m/s2 | - |
| | | [2] | Earthfixed target to satellite azimuth-rate-rate. (Topocentric CS) | deg/s2 | - |
| | | [3] | Earthfixed target to satellite elevation-rate-rate. (Topocentric CS) | deg/s2 | - |
| | | [4] | Satellite to earthfixed target azimuth-rate-rate. (Topocentric CS) | deg/s2 | - |
| | | [5] | Satellite to earthfixed target elevation-rate-rate. (Topocentric CS) | deg/s2 | - |
| | | [6] | Satellite to earthfixed target azimuth-rate-rate-rate. (Attitude Frame) | deg/s2 | - |

| | | | | | |
|------|------|-----|---|--------------------|---|
| | | [7] | Satellite to earthfixed target elevation-rate-rate. (Attitude Frame) | deg/s ² | - |
| ierr | long | - | Error vector | - | - |

7.103.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_extra_ef_target` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_extra_ef_target` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM])

Table 272: Error messages of xp_target_extra_ef_target function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|--|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_NO_DATA_ERR | 0 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_NO_SUCH_USER_TARGET_ERR | 1 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_NO_SUCH_LOS_TARGET_ERR | 2 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_NO_SUCH_EARTH_TARGET_ERR | 3 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_EARTH_TARGET_COMPUT_ERR | 4 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_WRONG_TARGET_TYPE_ERR | 5 |
| ERR | Wrong input deriv flag | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_DERIV_FLAG_ERR | 6 |
| ERR | Error getting target geodetic coordinates | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_GEO_COORD_ERR | 7 |
| ERR | Invalid time reference in target data | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_INVALID_TIME | 8 |

| | | | REF_ERR | |
|------|--|--|---|----|
| ERR | Internal computation error | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_RANGE_OR_POINTING_CALC_ERR | 9 |
| ERR | Wrong Atmospheric model in target data | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_MODE_COMBINATION_SWITCHES_ERR | 10 |
| ERR | Error calling to XL_Car_Geo CFI function | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_CAR_GEO_ERR | 11 |
| WARN | 2nd. Derivatives are not available | Calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_DER_2ND_NOT_AVAIL_WARN | 12 |
| WARN | Warning calling to XL_Car_Geo CFI function | Calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_AMBIGUOUS_SINGULAR_WARN | 13 |
| WARN | 1ST Derivative not computed for target. Satellite to target azimuth and elevation rates (SRAR CS) cannot be calculated | Calculation performed, except for azimuth and elevation rates in SRAR coordinate system. | XP_CFI_TARGET_EXTRA_EF_TARGET_DERIV_FLAG_WARN | 14 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned | Calculation performed | XP_CFI_TARGET_EXTRA_EF_ELLIPSOID_WARN | 15 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_EXTRA_EF_DEM_INTER_WARN | 16 |
| ERR | This function cannot be used with a target id computed with target S/C | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_SC_ERR | 17 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_DEGRADED SOLUTION_WARN | 18 |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_DEM_VOID_VALUE_DETECTED_ERR | 19 |

7.104 xp_target_list_extra_ef_target

7.104.1 Overview

The **xp_target_list_extra_ef_target** CFI function provides the same results as **xp_target_extra_ef_target** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

See note on mutithreading in section 7.98.1.1.

7.104.2 Calling Interface

The calling interface of the **xp_target_list_extra_ef_target** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    double freq;
    xp_target_id target_id = {NULL};
    xp_target_extra_ef_target_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_EF_TARGET], status;

    status = xp_target_list_extra_ef_target (&target_id, &choice,
                                            &target_type, &freq
                                            &list, ierr);
}
```

The **XP_NUM_ERR_TARGET_LIST_EXTRA_EF_TARGET** constant is defined in the file *explorer_pointing.h*.

7.104.3 Input Parameters

The `xp_target_list_extra_ef_target` CFI function has the following input parameters:

Table 273: Input parameters of xp_target_list_extra_ef_target function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|----------------------------|---------------|--|---------------|---|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | <code>long *</code> | - | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| freq | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.104.4 Output Parameters

The output parameters of the `xp_target_list_extra_ef_target` CFI function are:

Table 274: Output parameters of xp_target_list_extra_ef_target

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|-----------------------------------|---------------|-------------------------|---------------|---------------|
| list | <code>xp_target_extra_ef_t</code> | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of `xp_target_extra_ef_target` (see section 7.103.4).

7.104.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_extra_ef_target` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_extra_ef_target` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 275: Error messages of xp_target_list_extra_ef_target function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---|----------|
| ERR | No target data available | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_NO_DATA_ERR</code> | 0 |
| ERR | Wrong target type | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_WRONG_TARGET_TYPE_ERR</code> | 1 |
| ERR | Wrong input deriv flag | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_DERIV_FLAG_ERR</code> | 2 |
| ERR | Error getting target geodetic coordinates | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_GEO_COORD_ERR</code> | 3 |
| ERR | Invalid time reference in target data | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_INVALID_TIME_REF_ERR</code> | 4 |

| | | | | |
|------|--|--|--|----|
| ERR | Internal computation error | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_RANGE_OR_POINTING_CALC_ERR | 5 |
| ERR | Wrong Atmospheric model in target data | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_MODE_COMBINATION_SWITCHES_ERR | 6 |
| ERR | Error calling to XL_Car_Geo CFI function | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_CAR_GEO_ERR | 7 |
| WARN | 2nd. Derivatives are not available | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_DER_2ND_NOT_AVAIL_WARN | 8 |
| WARN | Warning calling to XL_Car_Geo CFI function | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_AMBIGUOUS_SINGULAR_WARN | 9 |
| WARN | 1ST Derivative not computed for target. Satellite to target azimuth and elevation rates (SRAR CS) cannot be calculated | Calculation performed, except for azimuth and elevation rates in SRAR coordinate system. | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_DERIV_FLAG_WARN | 10 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_ELLIPSOID_WARN | 11 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_DEM_INTER_WARN | 12 |
| ERR | This function cannot be used with a target id computed with target S/C | No calculation performed | XP_CFI_TARGET_EXTRA_EF_TARGET_SC_ERR | 13 |
| ERR | Memory allocation error | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_AUX_MEMORY_ERR | 14 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_DEM_DEGRADED_SOLUTION_WARN | 15 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_NO SUCH EARTH TARGET_ERR | 16 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_EARTH_TARGET_COMPUT_ERR | 17 |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_EF_TARGET_DEM_VOID_VALUE_DETECTED_ERR | 18 |

7.105 xp_target_extra_target_to_sun

7.105.1 Overview

The **xp_target_extra_target_to_sun** CFI function computes extra parameters related to the pointing from the target in input data structure to the sun.

Notes:

1) On target_number with targets computed with xp_target_list_inter or xp_target_range:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by xp_target_get_id_data.

2) A correction can be applied in order to compensate the travel time of light. This correction is not applied with default model. To activate this correction, the Sun model in xl_model_id must be initialized with the enum XL_MODEL_SUN_TRAVEL_TIME using the function xl_model_init (see [LIB_SUM]).

7.105.2 Calling Interface

The calling interface of the **xp_target_extra_target_to_sun** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long target_type, target_number, choice, iray;
    double freq;
    double sun_results[XP_SIZE_SUN_RESULT],
           sun_results_rate[XP_SIZE_SUN_RESULT],
           sun_results_rate_rate[XP_SIZE_SUN_RESULT];
    xp_target_id    target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_EXTRA_TARGET_TO_SUN], status;

    status = xp_target_extra_target_to_sun
        (&target_id, &choice, &target_type,
         &target_number, &iray, &freq,
         sun_results, sun_results_rate,
         sun_results_rate_rate, ierr);
}
```

The XP_SIZE_TARGET_RESULT_TARGET_TO_SUN and
XP_NUM_ERR_TARGET_EXTRA_TARGET_TO_SUN constants are defined in the file
explorer_pointing.h.

7.105.3 Input Parameters

The `xp_target_extra_target_to_sun` CFI function has the following input parameters:

Table 276: Input parameters of xp_target_extra_target_to_sun function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|----------------------------|---------------|--|---------------|---|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) <code>XP_NO_DER</code> (1) <code>XP_DER_1ST</code> (2) <code>XP_DER_2ND</code> |
| target_type | <code>long *</code> | | Flag to select the type of target | | <code>XP_USER_TARGET_TYPE</code> <code>XP_LOS_TARGET_TYPE</code> <code>XP_DEM_TARGET_TYPE</code> |
| target_number | <code>long *</code> | - | Target number | | ≥ 0 |
| iray | <code>long *</code> | - | Not used. The atmosphere refraction model can be defined via <code>atmos_id</code> initialization. | - | - |
| freq | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.105.4 Output Parameters

The output parameters of the `xp_target_extra_target_to_sun` CFI function are:

Table 277: Output parameters of xp_target_extra_target_to_sun

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------------|-----------------------------|------------------------|--|--------------------|------------------|
| sun_results | double [XP_SIZE_SUN_RESULT] | [0] | Target to Sun (centre) azimuth. (Topocentric CS) | deg | >= 0 < 360 |
| | | [1] | Target to Sun (centre) elevation. (Topocentric CS) | deg | >= -90 <= +90 |
| | | [2] | Tangent altitude over the Earth in the target to Sun (centre) look direction. (Earth fixed CS) | m | - |
| | | [3] | Target to Sun visibility flag: - 1: Sun eclipsed by the Earth. +1: Sun in sight. | - | +1, -1 |
| | | [4:XP_SIZE_SUN_RESULT] | (dummy) | - | - |
| sun_results_rate | double [XP_SIZE_SUN_RESULT] | [0] | Target to Sun (centre) azimuth-rate. (Topocentric CS) | deg/s | - |
| | | [1] | Target to Sun (centre) elevation-rate. (Topocentric CS) | deg/s | - |
| | | [2:XP_SIZE_SUN_RESULT] | (dummy) | - | - |
| sun_results_rate_rate | double [XP_SIZE_SUN_RESULT] | [0] | Target to Sun (centre) azimuth-rate-rate. (Topocentric CS) | deg/s ² | - |
| | | [1] | Target to Sun (centre) elevation-rate-rate. (Topocentric CS) | deg/s ² | - |
| | | [2:XP_SIZE_SUN_RESULT] | (dummy) | - | - |
| ierr | long | - | Error vector | - | - |

7.105.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_extra_target_to_sun` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_extra_target_to_sun` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 278: Error messages of xp_target_extra_target_to_sun function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|--|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_TO_SUN_NO_DATA_ERR | 0 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_TO_SUN_NO SUCH_USER_TARGET_ERR | 1 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_TO_SUN_NO SUCH_LOS_TARGET_E RR | 2 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_TO_SUN_NO SUCH_EARTH_TARGET _ERR | 3 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_TO_SUN_EARTH_TARGET_COMPUT_ERR | 4 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_TO_SUN_WRONG_TARGET_TYPE_ER R | 5 |
| ERR | Wrong input deriv flag | No calculation performed | XP_CFI_TARGET_TO_SUN_DERIV_FLAG_ERR | 6 |
| ERR | Error getting Sun position | No calculation performed | XP_CFI_TARGET_TO_SUN_SUN_POS_ERR | 7 |
| ERR | Invalid time reference in target data. | No calculation performed | XP_CFI_TARGET_TO_SUN_INVALID_TIME_REF_ERR | 8 |
| ERR | Error changing from TOD to EF. | No calculation performed | XP_CFI_TARGET_TO_SUN_TOD_TO_EF_ERR | 9 |
| ERR | Error getting direction vector from target to Sun. | No calculation performed | XP_CFI_TARGET_TO_SUN_DIR_VECTOR_ERR | 10 |
| ERR | Error getting geodetic | No calculation performed | XP_CFI_TARGET_TO_SUN_ | 11 |

| | | | | |
|------|--|--|--|----|
| | coordinates of the target | | CAR_GEO_ERR | |

7.106 xp_target_list_extra_target_to_sun

7.106.1 Overview

The **xp_target_list_extra_target_to_sun** CFI function provides the same results as **xp_target_extra_target_to_sun** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

See note on mutithreading in section 7.98.1.1.

Note: a correction can be applied in order to compensate the travel time of Sun light travel time. This correction is not applied with default model. To activate this correction, the Sun model in **xl_model_id** must be initialized with the enum **XL_MODEL_SUN_TRAVEL_TIME** using the function **xl_model_init** (see [LIB_SUM]).

7.106.2 Calling Interface

The calling interface of the **xp_target_list_extra_to_sun** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    double freq;
    long iray;
    xp_target_id target_id = {NULL};
    xp_target_extra_sun_target_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_TARGET_TO_SUN], status;

    status = xp_target_list_extra_target_to_sun (&target_id, &choice,
                                                &target_type, &iray, &freq
                                                &list, ierr);
}
```

The **XP_NUM_ERR_TARGET_LIST_EXTRA_TARGET_TO_SUN** constant is defined in the file *explorer_pointing.h*.

7.106.3 Input Parameters

The `xp_target_list_extra_target_to_sun` CFI function has the following input parameters:

Table 279: Input parameters of `xp_target_list_extra_target_to_sun` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|----------------------------|---------------|--|---------------|---|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |
| choice | <code>long *</code> | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | <code>long *</code> | - | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| iray | <code>long *</code> | - | Not used. The atmosphere refraction model can be defined via <code>atmos_id</code> initialization. | - | - |
| freq | <code>double *</code> | - | Frequency of the signal | Hz | ≥ 0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.106.4 Output Parameters

The output parameters of the `xp_target_list_extra_target_to_sunCFI` function are:

Table 280: Output parameters of xp_target_list_extra_target_to_sun

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--|---------------|-------------------------|---------------|---------------|
| list | <code>xp_target_extra_sun_target_results_list</code> | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of `xp_target_extra_target_to_sun` (see section 7.105.4).

7.106.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_extra_target_to_sun` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_extra_target_to_sun` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 281: Error messages of xp_target_list_extra_target_to_sun function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------------|--------------------------|--|----------|
| ERR | No target data available | No calculation performed | <code>XP_CFI_TARGET_LIST_TO_SU_N_NO_DATA_ERR</code> | 0 |
| ERR | The target does not exist | No calculation performed | <code>XP_CFI_TARGET_LIST_TO_SU_N_NO_SUCH_EARTH_TARGET_ERR</code> | 1 |
| ERR | Could not compute the DEM target | No calculation performed | <code>XP_CFI_TARGET_LIST_TO_SU_N_EARTH_TARGET_COMPUT_ERR</code> | 2 |
| ERR | Wrong target type | No calculation performed | <code>XP_CFI_TARGET_LIST_TO_SU_N_WRONG_TARGET_TYPE_ER</code> | 3 |
| ERR | Wrong input deriv flag | No calculation performed | <code>XP_CFI_TARGET_LIST_TO_SU_N_DERIV_FLAG_ERR</code> | 4 |
| ERR | Error getting Sun position | No calculation performed | <code>XP_CFI_TARGET_LIST_TO_SU</code> | 5 |

| | | | | |
|------|--|--|---|----|
| | | | N_SUN_POS_ERR | |
| ERR | Invalid time reference in target data. | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_INVALID_TIME_REF_ERR | 6 |
| ERR | Error changing from TOD to EF. | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_TOD_TO_EF_ERR | 7 |
| ERR | Error getting direction vector from target to Sun. | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_DIR_VECTOR_ERR | 8 |
| ERR | Error getting geodetic coordinates of the target | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_CAR_GEO_ERR | 9 |
| ERR | Internal Computation Error. Target not Found. | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_TARGET_NOT_FOUND_ERR | 10 |
| ERR | Wrong Atmospheric model in target data. | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_MODE_COMBINATION_SWITCHES_ERR | 11 |
| ERR | Error getting transformation matrix to Topocentric CS. | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_TOPO_ERR | 12 |
| ERR | Error getting Azimut/Elevation | No calculation performed | XP_CFI_TARGET_LIST_TO_SUN_DIR_POINTING_ERR | 13 |
| WARN | Input Derivative flag level is too high. Derivative flag set to the value used in the main target function | Calculation performed | XP_CFI_TARGET_LIST_TO_SUN_DERIV_FLAG_WARN | 14 |
| WARN | Precision not reached while calculating Sun pointing parameters | Calculation performed | XP_CFI_TARGET_LIST_TO_SUN_MAX_ALLOWED_ITERATIONS_WARN | 15 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned" | Calculation performed | XP_CFI_TARGET_LIST_TO_SUN_ELLIPSOID_WARN | 16 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_LIST_TO_SUN_DEM_INTER_WARN | 17 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed. A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided | XP_CFI_TARGET_LIST_TO_SUN_IRAY_ID_WARN | 18 |
| ERR | Error allocating memory | No calculation performed | XP_CFI_TARGET_LIST_LIST_TO_SUN_MEMORY_ERR | 19 |
| WARN | No precise intersection found with DEM. Degraded solution | Calculation performed | XP_CFI_TARGET_LIST_TO_SUN_DEGRADED_SOLUTION | 20 |

| | | | | |
|-----|----------------------------|--------------------------|---|----|
| | returned | | N_WARN | |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_LIST_TO_SU N_DEM_VOID_VALUE_DETECT ED_ERR | 21 |

7.107 xp_target_extra_target_to_moon

7.107.1 Overview

The **xp_target_extra_target_to_moon** CFI function computes extra parameters related to the pointing from the target in input data structure to the moon.

Note on target_number with targets computed with xp_target_list_inter or xp_target_range:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by xp_target_get_id_data.

7.107.2 Calling Interface

The calling interface of the **xp_target_extra_target_to_moon** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long target_type, target_number, choice, iray;
    double freq;
    double moon_results[XP_SIZE_moon_RESULT],
           moon_results_rate[XP_SIZE_MOON_RESULT],
           moon_results_rate_rate[XP_SIZE_MOON_RESULT];
    xp_target_id    target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_EXTRA_TARGET_TO_MOON], status;

    status = xp_target_extra_target_to_moon
        (&target_id, &choice, &target_type,
         &target_number, &iray, &freq,
         moon_results, moon_results_rate,
         moon_results_rate_rate, ierr);
}
```

The XP_SIZE_TARGET_RESULT_TARGET_TO_MOON and
XP_NUM_ERR_TARGET_EXTRA_TARGET_TO_MOON constants are defined in the file
explorer_pointing.h.

7.107.3 Input Parameters

The **xp_target_extra_target_to_moon** CFI function has the following input parameters:

Table 282: Input parameters of xp_target_extra_target_to_moon function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|---------------|---------------|--|---------------|---|
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| choice | long * | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | long * | | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| target_number | long * | - | Target number | | >= 0 |
| iray | long * | - | Not used. The atmosphere refraction model can be defined via atmos_id initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | >=0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.107.4 Output Parameters

The output parameters of the **xp_target_extra_target_to_moon** CFI function are:

Table 283: Output parameters of xp_target_extra_target_to_moon

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------------------|-------------------------------|-------------------------|--|--------------------|------------------|
| moon_resul ts | double [XP_SIZE_M OON_RESULT] | [0] | Target to Moon (centre) azimuth. (Topocentric CS) | deg | >= 0 < 360 |
| | | [1] | Target to Moon (centre) el. (Topocentric CS) | deg | >= -90 <= +90 |
| | | [2] | Tangent altitude over theEarth in the target to Moon (centre) look direction. (Earth fixed CS) | m | - |
| | | [3] | Target to Moon visibility flag: - 1: Moon eclipsed by the Earth. +1: Moon in sight. | - | +1, -1 |
| | | [4:XP_SIZE_MOON_RESULT] | (dummy) | - | - |
| moon_resul ts_rate | double [XP_SIZE_M OON_RESULT] | [0] | Target to Moon (centre) azimuth-rate. (Topocentric CS) | deg/s | - |
| | | [1] | Target to Moon (centre) elevation-rate. (Topocentric CS) | deg/s | - |
| | | [2:XP_SIZE_MOON_RESULT] | (dummy) | - | - |
| moon_resul ts_rate_rate | double [XP_SIZE_M OON_RESULT] | [0] | Target to Moon (centre) azimuth-rate-rate. (Topocentric CS) | deg/s ² | - |
| | | [1] | Target to Moon (centre) elevation-rate-rate. (Topocentric CS) | deg/s ² | - |
| | | [2:XP_SIZE_MOON_RESULT] | (dummy) | - | - |
| ierr | long | - | Error vector | - | - |

7.107.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_extra_target_to_moon** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_extra_target_to_moon** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 284: Error messages of xp_target_extra_target_to_moon function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|---|--------------------------|---|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_TO_MOON_NO_DATA_ERR | 0 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_TO_MOON_NO_SUCH_USER_TARGET_ERR | 1 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_TO_MOON_NO_SUCH_LOS_TARGET_EERR | 2 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_TO_MOON_NO_SUCH_EARTH_TARGE_T_ERR | 3 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_TO_MOON_EARTH_TARGET_COMPUT_ERR | 4 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_TO_MOON_WRONG_TARGET_TYPE_EERR | 5 |
| ERR | Wrong input deriv flag | No calculation performed | XP_CFI_TARGET_TO_MOON_DERIV_FLAG_ERR | 6 |
| ERR | Error getting Moon position | No calculation performed | XP_CFI_TARGET_TO_MOON_MOON_POS_ERR | 7 |
| ERR | Invalid time reference in target data. | No calculation performed | XP_CFI_TARGET_TO_MOON_INVALID_TIME_REF_ERR | 8 |
| ERR | Error changing from TOD to EF. | No calculation performed | XP_CFI_TARGET_TO_MOON_TOD_TO_EF_ERR | 9 |
| ERR | Error getting direction vector from target to Moon. | No calculation performed | XP_CFI_TARGET_TO_MOON_DIR_VECTOR_ERR | 10 |
| ERR | Error getting geodetic | No calculation performed | XP_CFI_TARGET_TO_MOON | 11 |

| | | | | |
|------|--|---|---|----|

| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_TO_MOON_D EM_VOID_VALUE_DETECTED_ ERR | 22 |

7.108 xp_target_list_extra_target_to_moon

7.108.1 Overview

The **xp_target_list_extra_target_to_moon** CFI function provides the same results as **xp_target_extra_target_to_moon** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

See note on mutithreading in section 7.98.1.1.

7.108.2 Calling Interface

The calling interface of the **xp_target_list_extra_to_moon** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    double freq;
    long iray;
    xp_target_id target_id = {NULL};
    xp_target_extra_moon_target_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_TARGET_TO_MOON], status;

    status = xp_target_list_extra_target_to_moon (&target_id, &choice,
                                                &target_type, &iray, &freq
                                                &list, ierr);
}
```

The **XP_NUM_ERR_TARGET_LIST_EXTRA_TARGET_TO_MOON** constant is defined in the file *explorer_pointing.h*.

7.108.3 Input Parameters

The `xp_target_list_extra_target_to_moon` CFI function has the following input parameters:

Table 285: Input parameters of xp_target_list_extra_target_to_moon function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-------------|---------------|---------------|--|---------------|---|
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| choice | long * | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | long * | - | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| iray | long * | - | Not used. The atmosphere refraction model can be defined via <code>atmos_id</code> initialization. | - | - |
| freq | double * | - | Frequency of the signal | Hz | >=0 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.108.4 Output Parameters

The output parameters of the **xp_target_list_extra_target_to_moon** CFI function are:

Table 286: Output parameters of xp_target_list_extra_target_to_moon

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--|---------------|-------------------------|---------------|---------------|
| list | xp_target_extra_moon_target_results_list | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of **xp_target_extra_target_to_moon** (see section 7.107.4).

7.108.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_list_extra_target_to_moon** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_list_extra_target_to_moon** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 287: Error messages of xp_target_list_extra_target_to_moon function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|----------------------------------|--------------------------|---|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_NO_DATA_ERR | 0 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_NO_SUCH_EARTH_TARGET_ERR | 1 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_EARTH_TARGET_COMPUT_ERR | 2 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_WRONG_TARGET_TYPE_ERR | 3 |
| ERR | Wrong input deriv flag | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_DERIV_FLAG_ERR | 4 |

| | | | | |
|------|--|---|--|----|
| | | | | |
| ERR | Error getting Moon position | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_MOON_POS_ERR | 5 |
| ERR | Invalid time reference in target data. | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_INVALID_TIME_REF_ERR | 6 |
| ERR | Error changing from TOD to EF. | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_TOD_TO_EF_ERR | 7 |
| ERR | Error getting direction vector from target to Moon. | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_DIR_VECTOR_ERR | 8 |
| ERR | Error getting geodetic coordinates of the target | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_CAR_GEO_ERR | 9 |
| ERR | Internal Computation Error. Target not Found. | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_TARGET_NOT_FOUND_ERR | 10 |
| ERR | Wrong Atmospheric model in target data. | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_MODE_COMBINATION_SWITCHES_ERR | 11 |
| ERR | Error getting transformation matrix to Topocentric CS. | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_TOPO_ERR | 12 |
| ERR | Error getting Azimut/Elevation | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON_DIR_POINTING_ERR | 13 |
| WARN | Input Derivative flag level is too high. Derivative flag set to the value used in the main target function | Calculation performed | XP_CFI_TARGET_LIST_TO_MOON_DERIV_FLAG_WARN | 14 |
| WARN | Precision not reached while calculating Moon pointing parameters | Calculation performed | XP_CFI_TARGET_LIST_TO_MOON_MAX_ALLOWED_ITERATIONS_WARN | 15 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned | Calculation performed | XP_CFI_TARGET_LIST_TO_MOON_ELLIPSOID_WARN | 16 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_LIST_TO_MOON_DEM_INTER_WARN | 17 |
| WARN | The ray tracing flag (iray) is ignored | Calculation performed A message informs the user that this parameter is not used. If the variable iray is equal to XP_NO_REF_INIT (=0), the warning is avoided | XP_CFI_TARGET_LIST_TO_MOON_IRAY_ID_WARN | 18 |
| ERR | Error allocating memory | No calculation performed | XP_CFI_TARGET_LIST_TO_MOON | 19 |

| | | | | |
|------|--|--------------------------|---|----|
| | | | ON_MEMORY_ERR | |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_LIST_TO_MO ON_DEM_DEGRADED_SOLUTION ON_WARN | 20 |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_LIST_TO_MO ON_DEM_VOID_VALUE_DETECTED_ERR | 21 |

7.109 xp_target_extra_specular_reflection

7.109.1 Overview

The **xp_target_extra_specular_reflection** CFI function calculates the direction of the specular reflection associated to a given target.

Note on target_number with targets computed with xp_target_list_inter or xp_target_range:

the target_number to be used to get a specific LOS target is an incremental number. That is, if there are N user targets US1, US2, ... USN and a number of LOS targets for every user target NLOS1, NLOS2, ..., NLOSN, if we want to get LOS target with index 1 corresponding to user target US3, the target_number to be used is NLOS1+NLOS2+1.

The target_number can also be got with the array returned by xp_target_get_id_data.

7.109.2 Calling Interface

The calling interface of the **xp_target_extra_specular_reflection** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long target_type, target_number, choice, iray;
    double freq;
    double spec_reflec_results[XP_SIZE_TARGET_RESULT_SPEC_REFL],
           spec_reflec_results_rate[XP_SIZE_TARGET_RESULT_SPEC_REFL],
           spec_reflec_results_rate_rate[XP_SIZE_TARGET_RESULT_SPEC_REFL];
    xp_target_id    target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_EXTRA_SPEC_REFL], status;

    status = xp_target_extra_specular_reflection
        (&target_id, &choice, &target_type,
         &target_number,
         &deflection_north, &deflection_east,
         spec_reflec_results,
         spec_reflec_results_rate,
         spec_reflec_results_rate_rate, ierr);
}
```

The **XP_SIZE_TARGET_RESULT_SPEC_REFL** and **XP_NUM_ERR_TARGET_EXTRA_SPEC_REFL** constants are defined in the file *explorer_pointing.h*.

7.109.3 Input Parameters

The `xp_target_extra_specular_reflection` CFI function has the following input parameters:

Table 288: Input parameters of xp_target_extra_specular_reflection function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|---------------|---------------|--|---------------|---|
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| choice | long * | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | long * | | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| target_number | long * | - | Target number | | >= 0 |
| deflection_north | double * | - | North-South component of the vertical deflection | deg | >= -90 <= 90 |
| deflection_east | double * | - | East-West component of the vertical deflection | deg | >= -90 <= 90 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.109.4 Output Parameters

The output parameters of the `xp_target_extra_specular_reflection` CFI function are:

Table 289: Output parameters of xp_target_extra_specular_reflection

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------------------|--|---------------|--|---------------|---------------|
| spec_reflec_results | double [XP_SIZE_TA_RGET_RESULT_SP EC_REFL] | [0] | X coordinate of reflected pointing direction. (EF CS) | m | - |
| | | [1] | Y coordinate of reflected pointing direction. (EF CS) | m | - |
| | | [2] | Z coordinate of reflected pointing direction. (EF CS) | m | - |
| | | [3] | Azimuth of the reflected pointing direction. (Topocentric CS) | deg | [0, 360) |
| | | [4] | Elevation of the reflected pointing direction. (Topocentric CS) | deg | [-90, 90] |
| | | [5] | Right ascension at which the reflected pointing direction points at target point. (True of Date CS) | deg | [0, 360) |
| | | [6] | Declination at which the reflected pointing direction points at target point. (True of Date CS) | deg | [-90, 90] |
| spec_reflec_results_rate | double [XP_SIZE_TA_RGET_RESULT_SP EC_REFL] | [0] | X velocity of reflected pointing direction. (EF CS) | m/s | - |
| | | [1] | Y velocity of reflected pointing direction. (EF CS) | m/s | - |
| | | [2] | Z velocity of reflected pointing direction. (EF CS) | m/s | - |
| | | [3] | Azimuth rate of the reflected pointing direction (Topocentric CS) | deg/s | - |
| | | [4] | Elevation rate of the reflected pointing direction (Topocentric CS) | deg/s | - |
| | | [5] | Right ascension rate at which the reflected pointing direction points at target point. (True of Date CS) | deg/s | - |
| | | [6] | Declination rate at which the reflected pointing direction points at target point. (True of Date CS) | deg/s | - |

| | | | | | |
|--------------------------|--|-----|--|--------|---|
| spec_reflec_results_rate | double [XP_SIZE_TARGET_RESULT_SPEC_REFL] | [0] | X acceleration of reflected point ing direction. (EF CS) | m/s2 | - |
| | | [1] | Y acceleration of reflected point ing direction. (EF CS) | m/s2 | - |
| | | [2] | Z acceleration of reflected point ing direction. (EF CS) | m/s2 | - |
| | | [3] | Azimuth rate rate of the reflected pointing direction (Topocentric CS) | deg/s2 | - |
| | | [4] | Elevation rate rate of the reflected pointing direction (Topocentric CS) | deg/s2 | - |
| | | [5] | Right ascension rate rate at which the reflected pointing direction points at target point. (True of Date CS) | deg/s2 | - |
| | | [6] | Declination rate rate at which the reflected pointing direction points at target point. (True of Date CS) | deg/s2 | - |
| ierr | long | - | Error vector | - | - |

7.109.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_target_extra_specular_reflectionCFI** function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_target_extra_specular_reflection** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 290: Error messages of xp_target_extra_specular_reflection function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|--|----------|
| ERR | No target data available | No calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_NO_DATA_ERR | 0 |
| ERR | Input deflection angle is out of range | No calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_WRON | 1 |

| | | | | |
|------|--|--------------------------|---|----|
| | | | G_DEF_ANGLE_ERR | |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_NO SUCH_USER_TARGET_ERR | 2 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_NO SUCH_LOS_TARGET_ERR | 3 |
| ERR | Could not compute the DEM target | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_EARTH_TARGET_COMPUT_ERR | 4 |
| ERR | The target does not exist | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_NO SUCH_EARTH_TARGET_ERR | 5 |
| ERR | Wrong target type | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_WRONG_TARGET_TYPE_ERR | 6 |
| ERR | Error getting geodetic coordinates of the target | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_CARTO_GEO_ERR | 7 |
| ERR | Error getting transformation matrix to Topocentric CS | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_TOPO_CS_ERR | 8 |
| ERR | Error getting direction angles | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_DIR_POINTING_ERR | 9 |
| ERR | Error while changing coordinate system | No calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_CHANGE_CS_ERR | 10 |
| WARN | Input Derivative flag level is too high. Derivative flag set to the value used in the main target function | Calculation performed | XP_CFI_TARGET_EXTRA_S_PECULIAR_REFLECT_DERIV_WARN | 11 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned | Calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_WARN | 12 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_DEM_INTER_WARN | 13 |
| ERR | This function cannot be used with a target id computed with target S/C | No calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_SC_ERR | 14 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_DEM_DEGRADED SOLUTION_WARN | 15 |
| ERR | Void value detected in DEM | No calculation performed | XP_CFI_TARGET_EXTRA_SPECULAR_REFLECT_DEM_VOID_V | 16 |

| | | | | |
|--|--|--|-------------------|--|
| | | | ALUE_DETECTED_ERR | |
|--|--|--|-------------------|--|

7.110 xp_target_list_extra_specular_reflection

7.110.1 Overview

The **xp_target_list_extra_specular_reflection** CFI function provides the same results as **xp_target_extra_specular_reflection** function but for all the targets computed with **xp_target_list_inter** function.

This function has been optimized to improve the run-time performance of the target computation of all the targets and runs in multithreading (Remark: multithreading is not enabled on MacOS platforms, see section 6).

See note on mutithreading in section 7.98.1.1.

7.110.2 Calling Interface

The calling interface of the **xp_target_list_extra_specular_reflection** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    long choice, target_type, target_number;
    double deflection_north, deflection_east;
    long iray;
    xp_target_id target_id = {NULL};
    xp_target_extra_spec_reflec_target_results_list list;
    long ierr[XP_NUM_ERR_TARGET_LIST_EXTRA_SPEC_REFL], status;

    status = xp_target_list_extra_specular_reflection (&target_id,
                                                       &choice, &target_type,
                                                       &deflection_north,
                                                       &deflection_east,
                                                       &list, ierr);
}
```

The **XP_NUM_ERR_TARGET_LIST_EXTRA_SPEC_REFL** constant is defined in the file *explorer_pointing.h*.

7.110.3 Input Parameters

The `xp_target_list_extra_specular_reflection` CFI function has the following input parameters:

Table 291: Input parameters of xp_target_list_extra_specular_reflection function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|------------------|---------------|---------------|--|---------------|---|
| target_id | xp_target_id* | - | Structure that contains the Target results | - | - |
| choice | long * | - | Flag to select the extra results to be computed. Even though derivatives could be requested by user, they will not be calculated if the target was computed without derivatives (a warning is raised in this case). | - | Allowed values: (0) XP_NO_DER (1) XP_DER_1ST (2) XP_DER_2ND |
| target_type | long * | - | Flag to select the type of target | | XP_USER_TARGET_TYPE XP_LOS_TARGET_TYPE XP_DEM_TARGET_TYPE |
| deflection_north | double * | - | North-South component of the vertical deflection | deg | >= -90 < = 90 |
| deflection_east | double * | - | East-West component of the vertical deflection | deg | >= -90 < = 90 |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.110.4 Output Parameters

The output parameters of the `xp_target_list_extra_specular_reflection` CFI function are:

Table 292: Output parameters of xp_target_list_extra_specular_reflection

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|---|---------------|-------------------------|---------------|---------------|
| list | <code>xp_target_extra_specular_reflect_target_results_list</code> | - | List of extra results | - | - |
| ierr | long | - | Error vector | - | - |

The values corresponding to returned arrays are the same as in the case of `xp_target_extra_specular_reflection` (see section 7.109.4).

7.110.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_list_extra_specular_reflection` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_list_extra_specular_reflection` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 293: Error messages of xp_target_list_extra_specular_reflection function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|--|----------|
| ERR | No target data available | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_NO_DATA_ERR</code> | 0 |
| ERR | Input deflection angle is out of range | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_WRONG_DEF_ANGLE_ERR</code> | 1 |
| ERR | Could not compute the DEM target | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_EARTH_TARGET_COMPUT_ERR</code> | 2 |
| ERR | Wrong target type | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_WRONG_TARGET_TYPE_ERR</code> | 3 |
| ERR | The target does not exist | No calculation performed | <code>XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_NO_EXIST_ERR</code> | 4 |

| | | | | |
|------|--|--------------------------|--|----|
| | | | S_PECULAR_REFLECT_NO_SUCH_EARTH_TARGET_ERR | |
| ERR | Error getting geodetic coordinates of the target | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_S_PECULAR_REFLECT_CAR_TO_GEO_ERR | 5 |
| ERR | Error getting transformation matrix to Topocentric CS | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_S_PECULAR_REFLECT_TOPO_CS_ERR | 6 |
| ERR | Error getting direction angles | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_S_PECULAR_REFLECT_DIR_POINTING_ERR | 7 |
| ERR | Error while changing coordinate system | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_S_PECULAR_REFLECT_CHANGE_CS_ERR | 8 |
| WARN | Input Derivative flag level is too high. Derivative flag set to the value used in the main target function | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_S_PECULAR_REFLECT_DERIV_WARN | 9 |
| WARN | DEM files were not found. Intersection with the ellipsoid is returned | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_ELLIPSOID_WARN | 10 |
| WARN | Warning in XP_DEM_inter | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_DEM_INTER_WARN | 11 |
| ERR | This function cannot be used with a target id computed with target S/C | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_SC_ERR | 12 |
| ERR | Error allocating memory | No calculation performed | XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_MEMORY_ERR | 13 |
| WARN | No precise intersection found with DEM. Degraded solution returned | Calculation performed | XP_CFI_TARGET_LIST_EXTRA_SPECULAR_REFLECT_DEM_DEGRADED SOLUTION_WARN | 14 |

7.111xp_target_close

7.111.1 Overview

The **xp_target_close** CFI function cleans up any memory allocation performed by the Target functions.

7.111.2 Calling Interface

The calling interface of the **xp_target_close** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_target_id target_id = {NULL};
    long ierr[XP_NUM_ERR_TARGET_CLOSE], status;

    status =     xp_target_close(&target_id, ierr);
}
```

The **XP_NUM_ERR_TARGET_CLOSE** constant is defined in the file *explorer_pointing.h*.

7.111.3 Input Parameters

The `xp_target_close` CFI function has the following input parameters:

Table 294: Input parameters of `xp_target_close` function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------|----------------------------|---------------|--|---------------|---------------|
| target_id | <code>xp_target_id*</code> | - | Structure that contains the Target results | - | - |

7.111.4 Output Parameters

The output parameters of the `xp_target_close` CFI function are:

Table 295: Output parameters of `xp_target_close`

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.111.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_target_close` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_target_close` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 296: Error messages of `xp_target_close` function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---|----------|
| ERR | Target ID is not initialized or it is being used | No calculation performed | <code>XP_CFI_TARGET_CLOSE_WRONG_ID_ERR</code> | 11 |

7.112 xp_target_get_id_data

7.112.1 Overview

The **xp_target_get_id_data** CFI function returns the target initialization data.

If the target_id has been computed with **xp_target_list_inter** or **xp_target_range** function, this function returns an array with as many elements as num_user_target. For every element, the list of LOS targets corresponding to user target are provided.

If the target_id has been computed with any other function, the returned array has only one position with the list of user targets and the list of LOS targets.

Note on usage: the user must reserve the input-output array to the function, no internal allocation is done.

7.112.2 Calling interface

The calling interface of the **xp_target_get_id_data** CFI function is the following (input parameters are underlined):

```
#include <explorer_lib.h>
{
    xp_target_id target_id;
    long status;
    xp_target_id_data *data;
    status =  xp_target_get_id_data (&target_id, data);
}
```

7.112.3 Input parameters

The **xp_target_get_id_data** CFI function has the following input parameters:

Table 297: Input parameters of xp_target_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------|----------------|---------------|-------------------------|---------------|---------------|
| target_id | xp_target_id * | - | Target Id. | - | - |

7.112.4 Output parameters

The output parameters of the **xp_target_get_id_data** CFI function are:

Table 298: Output parameters of xp_target_get_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------------------|------------------------|---------------|-------------------------------|---------------|---------------|
| xp_target_get_id_da ta | long | - | Status flag | - | - |
| data | xp_target_id_dat a* | - | Target initialization data | - | - |

7.112.5 Warnings and errors

This function does not return any error/warning code. Only the status of the function indicates if the execution was correct or not.

The possible causes of error are:

- The target_id was not computed.

7.113 xp_gen_dem_max_altitude_file

7.113.1 Overview

The **xp_gen_dem_max_altitude_file** CFI function generates a binary file with the maximum altitudes corresponding to every mini-tile, as described in input DEM configuration file. This file is needed to the maximum altitudes algo as described in section 7.71.4.

7.113.2 Calling Interface

The calling interface of the **xp_gen_dem_max_altitude_file** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    char *dem_config_file;
    long ierr[XP_NUM_ERRDEM_MAX_ALT_FILE], status;

    status = xp_gen_dem_max_altitude_file(dem_config_file,
                                         ierr);
}
```

The **XP_NUM_ERRDEM_MAX_ALT_FILE** constant is defined in the file *explorer_pointing.h*.

7.113.3 Input Parameters

The `xp_gen_dem_max_altitude_file` CFI function has the following input parameters:

Table 299: Input parameters of xp_gen_dem_max_altitude_file function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|--------|---------------|---|---------------|---------------|
| dem_config_file | Char* | - | DEM configuration file with description of mini tiles | - | - |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.113.4 Output Parameters

The output parameters of the `xp_gen_dem_max_altitude_file` CFI function are:

Table 300: Output parameters of xp_gen_dem_max_altitude_file

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.113.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_gen_dem_max_altitude_file` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_gen_dem_max_altitude_file` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 301: Error messages of xp_gen_dem_max_altitude function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---|----------|
| ERR | Error reading DEM configuration file | No computation performed | XP_GENDEM_MAXALTITUDE_READDEMCFG_ERR | 0 |
| ERR | Error allocating memory | No computation performed | XP_GENDEM_MAXALTITUDE_MEMORY_ERR | 1 |
| WARN | Some DEM tiles are not present. Corresponding altitudes set to zero. | Computation performed | XP_GENDEM_MAXALTITUDE_OPENTILE_WARN | 2 |
| ERR | Error reading DEM tile %s | No computation performed | XP_GENDEM_MAXALTITUDE_READTILE_ERR | 3 |
| ERR | Error initializing DEM ID | No computation performed | XP_GENDEM_MAXALTITUDE_DEMINIT_ERR | 4 |
| ERR | Error closing DEM ID | No computation performed | XP_GENDEM_MAXALTITUDE_DEMCLOSE_ERR | 5 |
| ERR | Error opening output file %s | No computation performed | XP_GENDEM_MAXALTITUDE_OPENOUTPUTFILE_ERR | 6 |
| ERR | Error writing to output file %s | No computation performed | XP_GENDEM_MAXALTITUDE_WRITEOUTPUTFILE_ERR | 7 |
| ERR | No output file name provided | No computation performed | XP_GENDEM_MAXALTITUDE_CONFIG_ERR | 8 |

7.113.6 Executable Program

The **gen_dem_max_altitude_file** executable program can be called from a Unix shell as:

```
gen_dem_max_altitude_file -dem_cfg_file dem_configuration_file
                           [ -v ]
                           [ -xl_v ]
                           [ -xo_v ]
                           [ -xp_v ]
                           [ -help ]
                           [ -show]
```

Note that:

- Order of parameters does not matter.
- Bracketed parameters are not mandatory.
- The input DEM configuration file must have the "MiniTiles_Configuration" tag in "DEM_User_Parameters" section.
- [-xl_v] option for EO_LIB Verbose mode.
- [-xo_v] option for EO_ORBIT Verbose mode.
- [-xp_v] option for EO_POINTING Verbose mode.
- [-v] option for Verbose mode for all libraries (default is Silent).
- [-show] displays the inputs of the function and the results.

Example:

```
gen_dem_max_altitude_file -dem_config_file
S1A_TEST_INT_DEMCFG_00000000T000000_99999999T999999_0003.EOF
```

7.114 xp_gen_dem_altitudes_from_ellipsoid

7.114.1 Overview

The **xp_gen_dem_altitudes_from_ellipsoid** CFI function generates, for an input DEM ACE2 or GDEM V2 dataset, whose altitudes are expressed w.r.t the geoid, an equivalent DEM but with the heights referenced to the ellipsoid, not to the geoid. This way the geoid undulation computation can be avoided at runtime and performance can be improved.

It can be computed the whole DEM or only a set of tiles, depending on the inputs to the function. The field “set_type” of **xp_gen_dem_alt_from_ellipsoid_inputs** struct can take the following values to select which DEM set to compute:

- **XP_ALL_DEM**: all DEM tiles will be computed.
- **XP_DEM_SET**: only the tiles of the DEM fully inside the interval provided by “lon_min”, “lon_max”, “lat_min” and “lat_max” fields of **xp_gen_dem_alt_from_ellipsoid_inputs** struct are computed.

7.114.2 Calling Interface

The calling interface of the **xp_gen_dem_altitudes_from_ellipsoid** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    char *dem_config_file, *output_dir;
    long num_harmonics;
    xp_gen_dem_alt_from_ellipsoid_inputs inputs;
    long ierr[XP_NUM_ERR_DEM_ALT_FROM_ELLIPSOID], status;

    status = xp_gen_dem_altitudes_from_ellipsoid(dem_config_file,
                                                &num_harmonics, output_dir,
                                                &inputs, ierr);
}
```

The **XP_NUM_ERR_DEM_ALT_FROM_ELLIPSOID** constant is defined in the file *explorer_pointing.h*.

7.114.3 Input Parameters

The `xp_gen_dem_altitudes_from_ellipsoid` CFI function has the following input parameters:

Table 302: Input parameters of xp_gen_dem_altitudes_from_ellipsoid function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|---------------------------------------|---------------|---|-----------------------|---|
| dem_config_file | char* | - | DEM configuration file with description of mini tiles | - | - |
| num_harmonics | long* | - | Number of harmonics to be used in geoid computation. | - | >0 |
| output_dir | char* | - | Output directory where generated DEM will be placed | - | - |
| inputs | xp_gen_dem_alt_from_ellipsoid_inputs* | - | DEM set to be processed | For range limits: deg | Longitude: [-180., 180.] Latitude: [-90., 90.] |

It is possible to use enumeration values rather than integer values for some of the input arguments:

- Choice. (See Table 3).

7.114.4 Output Parameters

The output parameters of the `xp_gen_dem_altitudes_from_ellipsoid` CFI function are:

Table 303: Output parameters of xp_gen_dem_altitudes_from_ellipsoid

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------|--------|---------------|-------------------------|---------------|---------------|
| ierr | long | - | Error vector | - | - |

7.114.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the `xp_gen_dem_altitudes_from_ellipsoid` CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library `xp_get_msg` (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the `xp_gen_dem_altitudes_from_ellipsoid` function by calling the function of the EO_POINTING software library `xp_get_code` (see [GEN_SUM]).

Table 304: Error messages of xp_gen_dem_max_altitude function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--------------------------------------|--------------------------|---|----------|
| ERR | Error reading DEM configuration file | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_READDEM_CFG_ERR | 0 |
| ERR | Wrong input DEM type | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_WRONGDEM_TYPE_ERR | 1 |
| ERR | Error allocating memory | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_MEMORY_ERR | 2 |
| ERR | Error reading DEM tile %s | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_READ_TILE_ERR | 3 |
| ERR | Error computing geoid undulation | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_GEOID_UND_U_ERR | 4 |
| ERR | Error opening output file %s | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_OPEN_OUT_PUT_ERR | 5 |
| ERR | Error writing to output file %s | No computation performed | XP_CFI_GENDEM_ALTITUDE_FROM_ELLIPSOID_WRITE_OUT | 6 |

| | | | PUT_ERR | |
|------|--|--------------------------|---|----|
| WARN | Some DEM tiles are not present. Corresponding altitudes set to zero. | Computation performed | XP_CFI_GEN_DEM_ALTITUDE_FROM_ELLIPSOID_OPEN_TILE_WARN | 7 |
| ERR | Wrong input DEM set type | No computation performed | XP_CFI_GEN_DEM_ALTITUDE_FROM_ELLIPSOID_WRONGDEM_SET_TYPE_ERR | 8 |
| ERR | Wrong input longitude interval (must be in interval [-180, 180] deg) | No computation performed | XP_CFI_GEN_DEM_ALTITUDE_FROM_ELLIPSOID_WRONGSET_LONGITUDE_ERR | 9 |
| ERR | Wrong input latitude interval (must be in interval [-90, 90] deg) | No computation performed | XP_CFI_GEN_DEM_ALTITUDE_FROM_ELLIPSOID_WRONGSET_LATITUDE_ERR | 10 |

7.115 xp_attitude_transform

7.115.1 Overview

The **xp_attitude_transform** CFI function allows the user to change the reference frame in which the internal data of the attitude ids are expressed.

Remark: all attitude related computations are performed in the True of Date Coordinate System. This means that, if one attitude id has been initialized with data expressed in another reference frame (e.g. attitude file with quaternions expressed in EF), at each call of a function using such attitude id (e.g. **xp_attitude_compute**) one or more conversions to True of Date will be performed. If the reference frame is changed to True of Date (using **xp_attitude_transform**), such conversions will not be executed and this will result in a run-time performance improvement.

Note: transformation of attitude ids that are initialized with Start Tracker files is not supported.

7.115.2 Calling Interface

The calling interface of the **xp_attitude_transform** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_transform_cfg transform_cfg;
    xp_attitude_def attitude_def;
    long ierr[XP_NUM_ERR_ATTITUDE_TRANSFORM], status;

    status = xp_attitude_transform(&transform_cfg, &attitude_def
                                ierr);
}
```

The XP_NUM_ERR_ATTITUDE_TRANSFORM constant is defined in the file *explorer_pointing.h*.

7.115.3 Input Parameters

The **xp_attitude_transform** CFI function has the following input parameters:

Table 305: Input parameters of xp_attitude_transform function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|---------------|-------------------|---------------|---|---------------|---------------|
| transform_cfg | xp_transform_cfg* | - | Structure containing parameters used for the transformation | - | - |
| attitude_def | xp_attitude_def* | - | Structure containing: satellite nominal attitude, satellite attitude target, instrument attitude target and attitude type | | |

7.115.4 Output Parameters

The output parameters of the **xp_attitude_transform** CFI function are:

Table 306: Output parameters of xp_attitude_transform

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|--------------|------------------|---------------|--|---------------|---------------|
| attitude_def | xp_attitude_def* | - | Structure containing: satellite nominal attitude, satellite attitude target, instrument attitude target and attitude type (Input/Output parameter) | - | - |
| ierr | long | - | Error vector | - | - |

7.115.5 Warnings and Errors

Next table lists the possible error messages that can be returned by the **xp_attitude_transform** CFI function after translating the returned error vector into the equivalent list of error messages by calling the function of the EO_POINTING software library **xp_get_msg** (see [GEN_SUM]).

This table also indicates the type of message returned, i.e. either a warning (WARN) or an error (ERR), the cause of such a message and the impact on the performed calculation.

The table is completed by the error code and value. These error codes can be obtained by translating the error vector returned by the **xp_attitude_transform** function by calling the function of the EO_POINTING software library **xp_get_code** (see [GEN_SUM]).

Table 307: Error messages of xp_attitude_transform function

| Error type | Error message | Cause and impact | Error code | Error No |
|------------|--|--------------------------|---|----------|
| ERR | Error transforming quaternions to vectors | No computation performed | XP_ATTITUDE_TRANSFORM_Q_UAT_2_VEC_ERR | 0 |
| ERR | Error computing rotation matrix | No computation performed | XP_ATTITUDE_TRANSFORM_G ET_ROTATION_ERR | 1 |
| ERR | Error transforming vectors to quaternions | No computation performed | XP_ATTITUDE_TRANSFORM_VE C_2_QUAT_ERR | 2 |
| ERR | Uninitialized attitude | No computation performed | XP_ATTITUDE_TRANSFORM_U NINIT_ATTITUDE_ERR | 3 |
| ERR | Only XP_SAT_NOMINAL_ATT, XP_SAT_ATT and XP_INSTR_ATT allowed | No computation performed | XP_ATTITUDE_TRANSFORM_U NALLOWED_ATT_TYPE_ERR | 4 |
| ERR | Transformation not supported for Star Tracker data | No computation performed | XP_ATTITUDE_TRANSFORM_ST AR_TRACKER_NOT_SUPPORTER_D_ERR | 5 |

7.116 xp_free_target_id_data

7.116.1 Overview

The **xp_free_target_id_data** CFI function allows the user to free the memory allocated by the **xp_target_id_data** structure.

7.116.2 Calling interfaces

The calling interface of the **xp_free_target_id_data** CFI function is the following (input parameters are underlined):

```
#include <explorer_pointing.h>
{
    xp_target_id_data *data;
    long num_user_target;
    long status;

    status = xp_free_target_id_data(data, num_user_target);
}
```

7.116.3 Input Parameters

The **xp_free_target_id_data** CFI function has the following input parameters:

Table 308: Input parameters of xp_free_target_id_data function

| C name | C type | Array Element | Description (Reference) | Unit (Format) | Allowed Range |
|-----------------|-------------------|---------------|--|---------------|---------------|
| data | xp_target_id_data | - | Structure containing the target parameters | - | - |
| num_user_target | long | - | Number of the targets defined by user | - | - |

7.116.4 Output Parameters

The **xp_free_target_id_data** CFI function has no output parameters.

7.116.5 Warnings and Errors

The **xp_free_target_id_data** CFI function has no warnings and errors defined.

8 RUNTIME PERFORMANCES

The library performance has been measured by dedicated test procedures run in 5 different platforms under the below specified machines:

| OS ID | Processor | OS | RAM |
|----------------|---|--|------------|
| LINUX64 | Intel(R) Xeon(R) CPU E5-2609 v4 @ 1.70GHz (8 cores) | GNU LINUX 4.10.0-42-generic (Ubuntu 17.04) | 64 GB |
| LINUX64_LEGACY | Intel(R) Xeon(R) CPU E5-2470 0 @ 2.30GHz (16 cores) | GNU LINUX 2.6.24-16-generic (Ubuntu 10.04) | 16 GB |
| MACIN64 | Intel Core i7 4 cores @2,6 GHz | MACOSX 10.12 | 16 GB |
| WINDOWS64 | Intel(R) Xeon(R)CPU ES-2630 @ 2.40GHz 2.40GHz | Microsoft Windows 7 | 16 GB |

The table below shows the time (in miliseconds - ms) each function takes to be run under each platform:

| Function ID | WINDOWS64 | LINUX64 | LINUX64 LEGACY | MACIN64 |
|--------------------------------|------------------|----------------|-----------------------|----------------|
| xp_attitude_init | 0.003300 | 0.001000 | 0.001000 | 0.002000 |

Note that when the value “0.000000” is defined for a function in a certain platform, it means that its running time is lower than 1 nano-second and so it can be considered as “0”.

9 LIBRARY PRECAUTIONS

The following precaution shall be taking into account when using EO_POINTING library:

- When a message like
`<LIBRARY NAME>>> ERROR in xp_function: Internal computation error # n`
or
`<LIBRARY NAME>>> WARNING in xp_function: Internal computation warning # n`
appears, run the program in **verbose** mode for a complete description of warnings and errors and call for maintenance if necessary.

10 USER REFRACTION FILE

The refraction table is needed to initialize the atmosphere id with an user initialization mode.

The file must contain the co-index of refraction at different geometric altitudes, starting from 0 Km. The altitude should be strict monotonic increasing.

The format of that file must be as follows (a text file without headers):

Table 309: User refraction file format

| <u>1st column</u> | <u>2nd column</u> |
|-------------------------------|---------------------------------|
| <u>Geometric altitude [m]</u> | <u>Co-index of refraction N</u> |
| <u>0.000</u> | <u>262.049</u> |
| <u>1000.000</u> | <u>238.630</u> |
| <u>2000.000</u> | <u>216928</u> |
| <u>3000.000</u> | <u>195.392</u> |
| ... | ... |
| <u>90000.000</u> | <u>0.001</u> |
| <u>95000.000</u> | <u>0.000</u> |
| <u>100000.000</u> | <u>0.000</u> |

Note in this table that:

- the relative index of refraction $m = 1 + N \times 10^{-6}$, where N is the co-index of refraction.
- The fields of each row must be separated by blanks (at least one).
